CONSTRUCTION DIVISION

Jack Silver, Chief

ACKNOWLEDGMENTS—Many persons participated in the various activities of the 1972 Census of Construction Industries. Primary direction of the program was performed by Shirley Kallek, Associate Director for Economic Fields, and Melvin A. Hendry, Assistant Director for Economic and Agriculture Censuses.

This report was prepared in the Construction Statistics Division under the general direction of Jack Silver, Chief. Alan I. Blum, as Assistant Division Chief for Industry Surveys, was responsible for the planning and guidance of this project and assumed the responsibility for the overall management and implementation of the census of construction industries. A. William Visnansky was responsible for the preparation of these reports. William W. Langham, Jr., Elaine M. Thomas, Margaret A. Tannahill, Barbara Hadden, Glenda Hopkins, and Nellie Einert made important contributions to the census in such areas as developing specifications and procedures, solving problems, or reviewing the data for publication. Edward K. Ricketts developed the sampling plans, much of the computer processing specifications, and the quality control procedures. The electronic computer programs were developed under the direction of Herbert S. Isham, Jr. The computer editing and industry coding programs were developed by Katherine F. Bair, Linda M. Mersch, and Charles A. Woods. Donald E. Ball and William G. Reece developed the computer tabulation programs. Mary D. Brady was responsible for the data preparation specifications and procedures.

The mailing, collecting of data, and processing of administrative record information were conducted by the Economic Surveys Division under the direction of Roger Bugenhagen, Chief. Assistance was provided by Samuel Schweid, Andrew Grieco, Charles Venters, Shirley Roberts, Robert Viehman, Jerry McDonald, Joel Richardson, and Sandra Katis.

Forms design was performed in the Administrative Services Division, Henry J. Husmann, Chief. Gladys Potts, Joyce Teague, Helen Hindt, and Margaret Swinton made significant contributions.

Within the Publications Services Division, many individuals made significant contributions in the areas of publication planning and design, editorial review, composition, and printing procurement.

Clerical and data keying operations were performed in the Data Preparation Division at Jeffersonville, Indiana, under the direction of O. Bryant Benton, Chief, who was assisted by Don L. Adams and Robert L. Allen.

The geographic coding procedures were developed in the Geography Division under the direction of Jacob Silver, Chief, assisted by Zigmund Decker, Terence McDowell, Silla Tomasi, Robert Hamill, David Christy, Kurt LeGait, and John Hawkins. Computer processing was directed by James R. Pepal, Chief, Computer Services Division. C. Thomas DiNenna, Jesse Verdeja, and Willie E. Clark provided staff assistance.

Donald Young of the Economic Census Staff participated in the overall planning and review of the census operations.

Special acknowledgment is also due the many businesses whose cooperation has contributed to the publication of these data.

The statistics presented in this volume incorporate the industry and special report series CC72-I and CC72-S.

HISTORY

The 1972 Census of Construction Industries covering operations during 1972 and collected in 1973 is the fifth such census for the United States. The first census covered 1929 and was collected in connection with the Fifteenth Decennial Census of 1930. Censuses were also taken covering the years 1935 and 1939. The census of construction industries—like the census of manufactures and the census of business—was suspended during World War II. The census of construction industries was not resumed until 1967.

AUTHORITY

The 1972 Census of Construction Industries was conducted as an integral part of the 1972 Economic Censuses, under authority of Title 13, United States Code. The economic censuses program also includes censuses of business, manufactures, mineral industries, and transportation.¹ Present legislation provides for economic censuses every 5 years. The

¹Separate 1972 Censuses of the Construction Industry, Manufactures, and Business were also conducted in Puerto Rico, the Virgin Islands, and Guam.

next censuses are scheduled to be taken in 1978 covering the year 1977.

SCOPE

The 1972 Census of Construction Industries covers all establishments primarily engaged in contract construction (general contractors or special trade contractors) or in construction for sale on their own account (operative builders)² or in subdividing real property into lots (subdividers and developers, except cemeteries) as defined in the 1972 edition of the *Standard Industrial Classification (SIC) Manual*.³ This is the system of industrial classification developed over a period of years by experts on classification in government and private industry under the guidance of the Office of Management and Budget. This system of classification is in general use among government agencies and also outside the government.

Construction—The *SIC Manual* defines construction to include three broad types of activity, namely, (1) building construction by general contractors or by operative builders, (2) other construction by general contractors, and (3) construction by special trade contractors.

General building contractors are primarily engaged in the construction of dwellings, office buildings, stores, farm buildings, and other projects of a similar character.

Operative builders are primarily engaged in construction on their own account for sale rather than as contractors.

General contractors in fields other than buildings, often referred to as heavy construction contractors, are primarily engaged in the construction of highways, streets, bridges, and tunnels; docks and piers; dams and water projects; sewage collection, treatment, and disposal facilities; storm sewer systems; air fields; and other heavy construction which involves either earth moving or the erection of structures and appurtenances other than buildings. The removal of overburden is classified in mining.

Special trade contractors are primarily engaged in specialized construction activities such as plumbing, painting, electrical work, and carpentry.

General contractors in both the building field and the heavy construction field usually assume responsibility for an entire

²Investment builders (establishments primarily engaged in construction on own account for lease or rental) were not included within the scope.

³Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual*, 1972.

INTRODUCTION—Continued

construction project, but may subcontract to others those portions of the project requiring special skills or equipment. Special trade contractors may work for general contractors under subcontracts or may work directly for the owner of the property.

Subdividers and Developers, Except Cemeteries—The *S/C Manual* defines subdividers and developers, except cemeteries, to include establishments engaged in subdividing real property into lots, except cemetery lots, and in developing it for resale on their own account or for others.

ESTABLISHMENT BASIS OF REPORTING

The census of construction industries is conducted on an establishment basis. For the purposes of this census, a "construction establishment" is defined as a relatively permanent office, or other place of business at which or from which the usual business activities related to construction are conducted. (With the exceptions indicated below, a relatively permanent office is one which has been established for the management of more than a single project or job and which has been or is expected to be maintained on a continuing basis.) Such "establishment" activities include (but are not limited to) estimating, bidding, scheduling, purchasing, supervision, and operation of the actual construction work being conducted at one or more construction sites.

A separate report was required from each business concern included in the census (see "Sample Design, Estimating Procedures, and Reliability of Data" section below) for each of its construction establishments. To the extent that several companies (i.e., sole proprietorships, partnerships, corporations, syndicates, cooperatives, etc.) shared or operated out of a single office or place of business, each such legal entity engaged in construction was considered, for the purposes of this census, as a separate establishment and each was requested to file the necessary "establishment" report covering its own activities which it conducted in or from that common office.

Concerns with more than one construction establishment were required to submit a separate report for each such establishment operated during all or any part of 1972.

Separate construction reports were not required for each project or construction site. Aggregate information on these projects and sites was included, however, in the report of the construction establishment responsible for the work of these construction projects and sites.

There were two exceptions to the "relatively permanent office" rule: (1) In case of joint ventures, a separate establishment report was required covering the joint venture entity even though established to undertake only a single project. (2)

To the extent that separate legal entities were set up to carry out only a given project or part of a project, then a separate establishment report was also required for each legal entity.

If a concern engaged in two or more distinctly different lines of economic activity (wholesale or retail trade, service, manufacturing, construction, mining, etc.) at the same place of business, it was requested to file a separate report appropriate for each such activity, provided that each activity was of substantial size and separate records were maintained or substantially accurate estimates could be prepared for these separate activities.

If a separate establishment report could not be prepared for each such activity, then a construction report was requested covering all activities of that establishment, provided the 1972 gross receipts from construction activities exceeded the gross receipts from each of its other activities.

An establishment is not necessarily identical with the "company" or "enterprise" which may consist of one or more establishments. The census of construction industries figures represent a summary of records for individual establishments rather than for companies. The census tabulations, therefore, differ from those prepared on a company basis.

The 1972 Census of Construction Industries reports do not include figures for separate administrative offices, warehouses, garages, or other auxiliary units which service construction establishments of the same company. Data on separate central administrative offices and auxiliaries are included in the economic censuses report entitled "1972 Enterprise Statistics."

Construction businesses with no payroll during 1972 (nonemployers) were not required to file census reports. As described in the "Sample Design, Estimating Procedures, and Reliability of Data" section below, limited data for these firms were obtained from the Internal Revenue Service. For the purpose of this census, each separate return was assumed to apply to an establishment.

Foreign construction activities were not included in this census.

METHOD OF ACCOUNTING AND TIME PERIOD COVERED

For the purposes of the census report, respondents were allowed to use any system of accounting by which they maintained their books. Therefore, reports could be based on cash, accrual, or completion of contract methods of accounting.

It was intended that each report should cover the calendar year 1972. If reporting on a calendar year basis would involve

considerable additional costs, fiscal year reporting was permitted in those cases where it did not differ greatly. However, all payroll and employment figures were required to be reported on a calendar year basis.

INDUSTRY CLASSIFICATION OF ESTABLISHMENTS

Each of the establishments covered in the census was classified in one of the construction industries in accordance with the industry definitions embodied in the Standard Industrial Classification (SIC) System. Under this system of classification, an industry is generally defined as a group of establishments primarily engaged in the same or similar lines of economic activity. Each establishment is assigned an industry code under this system on the basis of its major activity. Establishments with no payroll during 1972 were classified on the basis of the kind-of-business activity reported on the tax returns.

Each establishment receiving a report form was requested to indicate the kind-of-business activities engaged in during 1972 and if they engaged in multiple activities, to rank the activities in the order of importance based upon total receipts. This information was used for the computer assignment of appropriate industry classifications. During this work various tests were also made using other data reported on the questionnaire. The proportion of construction receipts to total receipts was checked to verify that the establishment was primarily in construction. Also taken into consideration were the types of construction work engaged in during the year and the extent work was undertaken for other contractors.

It should be recognized that construction establishments often engage in various construction activities. Only in a few instances do the industry (SIC) categories take into consideration combinations of such activities. For example, SIC 1711 includes establishments primarily engaged in plumbing, heating, air conditioning, ventilation, and refrigeration work. However, in other cases it is necessary to assign a single industry code to the establishment based on its major activity. The statistics shown for an industry, therefore, reflect not only the primary activities of the establishments in the industry but also their secondary activities.

The structure of the Standard Industrial Classification System makes it possible to classify or tabulate establishments by industry on a 2-digit, a 3-digit, or a 4-digit basis according to the degree of detail available and needed.

A revised edition of the SIC Manual was issued in 1972. In this revision extensive modifications were made in the construction sector. Each establishment report processed in the 1972 Census of Construction Industries was classified in accordance with both the old and the new SIC. The preliminary reports, the final reports, and volumes are pub-

lished in accordance with the new SIC. Among the analyses made was a "bridge" tabulation showing the disposition of each "old" industry in terms of the "new" industries and, conversely, the composition of each new industry in terms of the old industries. These "bridge" tabulations are included as an appendix in all bound volumes of the 1972 Census of Construction Industries. In addition, for industries where the classification revision was extensive, data from the "bridge" tabulations are included as table 1b in the final industry reports.

For those selected industries which were subject to the most revision under the new SIC system, 1967 establishment records were reclassified and 1972 SIC codes were assigned based on their 1967 activity. Limited data for 1967 were then retabulated to approximate new 1967 totals for the 1972 industries. These retabulated 1967 totals appear in U.S. Summary tables B1 and B2 and in industry tables 1a and 2. For other tables, historical information is unavailable for many industries because of the SIC revision. Comparable 1967 data shown for the revised SIC industries in the published tables were derived from previously published information. In some instances, the 1967 data shown are substantially comparable and the minor elements of noncomparability are explained in footnotes and in industry texts.

It should be noted that extensive revisions of industry definitions, as occurred between the 1967 and 1972 editions of the SIC, may affect totals for industries which are not changed in definition. This may best be illustrated by the following example: Consider the case of an establishment with 60 percent of its output in Industry A and 40 percent of its output in Industry B. In a revision of industry definitions, Industry B may be unchanged but Industry A may be separated into two new industries. Call the new Industries C and D. Assume that the hypothetical establishment on the new SIC produces 40 percent in B, 30 percent in C, and 30 percent in D. Such an establishment would be classified in Industry A on the old SIC and in Industry B on the new SIC. This occurs in spite of the fact that Industry B is conceptually unchanged.

SAMPLE DESIGN, ESTIMATING PROCEDURES, AND RELIABILITY OF DATA

The firms included in the 1972 Census of Construction Industries were identified as part of the operations common to all the 1972 Economic Censuses. Construction firms were divided into employers (those firms with payroll) and nonemployers (those firms with no payroll). Statistical information for the employers was obtained in the census by a survey which included all medium size and large employers and a sample of the smaller ones. Census forms were not required from the nonemployers. Statistics for the latter group were obtained from administrative records of other agencies of

INTRODUCTION—Continued

the Federal Government from information supplied directly to them.

Employer Firms

1. *Developing the Sampling Frame—Employer Firms* (those with payroll)—This operation started with obtaining a list of all construction firms in the active records of the Internal Revenue Service (IRS) which were subject to payment of the Federal Insurance Contribution Act taxes. As in recent economic censuses, beginning with 1954, the basic source of this list was the Internal Revenue Service Business Master File, a comprehensive list of firms that are engaged in business activities in the United States. This list contains the name, address, and form of ownership of each firm and also indicates whether or not the firm is subject to the Federal Insurance Contributions Act. Each firm in this list is assigned a unique employer identification number (EI number) which is used in filing its various reports with IRS. The Social Security Administration (SSA) maintains a similar list, using the same identification numbers, which also contains information on the industrial classification of each firm. The Bureau of the Census obtained both of these lists and combined them.

Under special arrangements which safeguarded the confidentiality of all the information, the Bureau also obtained administrative records data on payrolls and receipts and added these data to the combined list. The list thus created from the IRS-SSA information was a list of employer "firms." However, for the 1972 Economic Censuses the basic reporting unit is the "establishment." Therefore, steps were taken to identify the individual establishments of those firms which operate more than one place of business (or establishment). The information for making this determination was obtained by means of a mail canvass of all known multiestablishment firms and any large, apparently single-establishment firms in advance of the mailing date for the 1972 census forms. Thus, the 1972 Economic Census list for single-establishment employer firms was obtained from the IRS-SSA, but the list of establishments of multiestablishment employer companies was obtained directly from those companies by the mail canvass.

In general the IRS-SSA list provided sufficient industrial classification data to assign a firm to the proper economic census, but there were a number of firms for which this information was inadequate or unavailable. A special form (NC-X3, General Report) was mailed to all such firms on the 1972 Economic Censuses mailing list. The NC-X3 requested information on the nature of the firm's activities. Using this information, the industrial classification of the firms was determined and the firm was assigned to the

appropriate economic census. Since construction firms found in this way were identified as such only after the regular census mailing took place, it was necessary to treat them as a supplement to the basic list.

2. *Selecting the Employer Sample*—A construction universe of about 530,000 single-establishment employer firms and 3,000 multiestablishment employers accounting for another 7,600 construction establishments was developed by the procedures described above.

A sample of 145,000 employer establishments was selected from this universe which was generally organized in old SIC by State sequence. This sample was designed to provide publishable estimates for most construction industries at the State level. The sample consisted of all construction establishments in multiestablishment companies, all single-establishment companies with the equivalent of 10 or more employees and a sample of single-establishment companies with fewer than 10 employees. (The number of company employees was estimated from the 1971 payroll data in the administrative records using prior census industry average wage per employee (adjusted for change since 1967).) The sampling was accomplished using a systematic method within each 4-digit SIC. (Where the SIC code was not complete, such cases were sampled in the largest 4-digit group to which they could be assigned, e.g., 1600 was sampled as part of 1621.) For establishments with fewer than 10 employees, but more than 5 employees, every other establishment was selected (50-percent sample). For those establishments with fewer than 5 employees, a 10-percent systematic sample was selected. This basic sampling plan was not applied to 4-digit industry State cells which had fewer than 10 establishments in the 1967 census. All cases in such States were taken into the sample (100-percent sample). A 100-percent sample was also taken of the firms which became active in 1972 but were identified after the date that the census universe was developed, as well as construction firms identified from the NC-X3, General Report. Transfers from other census areas such as manufacturing also occurred during the processing stages because of changes in activity, or errors in the mail-out classification. These were added to the construction census with certainty.

3. *Estimating Procedures for 1972 Data*—Since all larger employer firms and some smaller ones were included in the census, sample estimation was required only for the universe of firms not selected with certainty. These were generally firms with the payroll equivalent of fewer than 10 employees in 1971. The published statistics are the totals of the estimates for the sampled firms and the aggregates

for the certainty (larger) firms. All estimates for 1972 published here are simple unbiased estimates of the form:

$$x'_c = \sum_{i=1}^{n_c} x_i/p_i$$

where:

x'_c is the simple unbiased estimate of a characteristic for a publication cell.

x_i is the reported value of a characteristic for an individual establishment in the publication cell.

p_i is the selection probability of that firm.

n_c is the number of firms in the sample for the cell.

This method of estimation was used for all 1972 characteristics. Note that before this formula was applied it was necessary to convert into dollars those breakdowns of construction receipts which had been reported by the establishments as percentages. This included construction receipts by type of project, location of project, etc.

4. *Estimating Procedures for 1967 Data*—The 1967 estimates shown are of two different types. For 4-digit industries that were not significantly affected by the 1972 revision of the Standard Industrial Classification Manual, the estimates shown are those originally published in the 1967 census volumes. Those estimates were derived using ratio estimates except for "number of establishments" and "number of proprietors and working partners" where simple unbiased estimations were also used in 1967. (For a full description of the 1967 estimating procedures, consult any of the 1967 Census of Construction Industries final reports.)

For industries that were significantly affected by the SIC revision, historical (1967) estimates were developed as follows:

- a. The 1967 establishment records for selected 4-digit industries were recoded into the 1972 classification system based on the reported 1967 data.
- b. Within each of the 1967 industries, the recoded records were then tabulated to produce simple unbiased estimates for each State by 1972 SIC.
- c. These simple unbiased estimates were then summed to the 1967 SIC by State level, and the sum and separate estimates were raked to the published 1967 SIC by State estimates.

This process was applied within each of the affected 1967 industries, and when completed the adjusted estimates for the 1972 industries from each old industry were summed to create the 1967 estimates for the 1972 classification.

5. *Reliability of Employer Statistics*—Since the estimates for employer establishments in these reports are based on

samples, they are subject to sampling variability and may be expected to differ from results which would have been obtained if a complete census had been taken using the same forms and procedures. The sampling errors which are shown in the tables were estimated directly from the sample reports using methods appropriate for the sample design and form of estimation used.

The standard error is a measure of sampling variability; that is, the variation that might occur by chance because only a sample of the population is surveyed. As calculated for this report, the standard error also partially reflects the effect of random errors of response and processing but does not take into account the effect of any consistent biases due to those types of errors. The chances are about 68 out of 100 that an estimate from the sample would differ from a complete census by less than the standard error. The chances are about 95 out of 100 that the difference is less than twice the standard error, and about 99 out of 100 that it is less than 2-1/2 times the standard error. Individual estimates with large standard errors have been shown in the published tables. Any such estimates should be used with caution. The very large relative standard errors generally occur for the smaller estimates.

Separate measures of the reporting and processing errors are not available. However, estimates which were subject to large errors of these types are likely to have been detected and corrected or withheld from publication in the process of the review of the data for reasonableness and consistency. Other specific qualifications of the published data are indicated in the appropriate footnotes to the tables.

U.S. Summary tables B2 and B3 show the standard error for the U.S. level statistics for each 2-digit industry group. Table 2 for the industries shows the standard error for the statistics for each industry. Although standard errors have been calculated for all of the published statistics, because of space limitations the other tables show standard errors only for some characteristics.

Nonemployer firms

1. *General*—Nonemployer firms were identified in the following way. As described earlier, the information derived from the business income tax returns for all firms was matched to the census employer file on the basis of common identification numbers. Those business income tax records which could not be matched were further classified on the basis of several characteristics. Records with characteristics consistent with firms without payroll were treated as nonemployers. The nonemployer construction firms were not required to file census reports.

There were some exceptions to this general rule. Where the administrative data were not made available, report forms were mailed out to firms without employment. Such

firms were added to the nonemployer universe if they did not report any employment but did report receipts.

For "number of establishments" each separate income tax return was assumed to be an establishment. "Total receipts" is based on receipts information reported on the tax return. Although this group accounts for more than 50 percent of the total number of construction establishments, it accounts for only a small proportion of total receipts of all construction establishments.

2. *Qualifications of the Nonemployer Data*—Since no sampling was involved in the nonemployer establishments the statistics for nonemployers are not subject to sampling variability. However, these data are subject to an unknown amount of reporting and processing error which could not be detected by the Census Bureau.

CENSUS REPORT FORMS

Information for the 1972 Census of Construction Industries was obtained from employer establishments primarily through the use of one standard questionnaire (Form CC-1) irrespective of their construction industry classifications or sizes.

The standard report form was essentially the same (with two exceptions) as the one used for the 1967 Census of Construction Industries, however, the arrangement of the questions was altered. The rearrangement of the questions was done to aid the respondent in reporting and to facilitate the Bureau's use of the report form during the processing operations. Exceptions mentioned above include the addition of a question on fixed assets and depreciation and on expansion in the inquiry on types of construction engaged in during 1972.

In reviewing and developing this report form, comments and recommendations were solicited from construction trade associations, appropriate advisory groups, and large and small construction firms—totaling several hundred in all.

In addition to statistical data, information was obtained on the report form regarding the physical location, Employer Identification Number, company affiliation, and legal form of ownership. These kinds of information were necessary to assure control over the completeness of coverage, and also permitted the classification of each establishment by geographic location and type of organization.

The 1972 Census of Construction Industries benefited from several other report forms which were utilized in the 1972 Economic Censuses. Among these were the NC-X1A, NC-X1B, and NC-X2—precanvass listing forms for multiunit firms; NC-X1C—out-of-scope survey form; NC-X3—General Schedule; NC-X6—Central Administrative Office or Auxiliary Form for multiunit firms; and NC-K1—Company Summary Report for multiunit firms.

PROCESSING OF DATA

The 1972 census forms were both distributed by mail and returned by mail. Mailing of report forms took place in December 1972. Collection was essentially completed by July 1973. All mailing and receiving, including the various reminder mailings as well as routine editing and coding was done at the Census Bureau's Data Preparation Division in Jeffersonville, Ind.

The completed report forms underwent extensive processing following their receipt. A preliminary visual scanning identified obviously deficient reports and reports needing clarification. If required, these problems were resolved by further contact with the respondents. Next the data were converted through an encoding operation into magnetic tape, transmitted to Washington through a telephone-computer link-up, and transferred to other computer tapes. All computer processing, review of the tabulated data, and the preparation of the publications were performed in Washington.

All records underwent a detailed computer review and analysis with records containing significant problems being rejected. These were reviewed analytically and, where necessary, further contacts were made with the respondent. Most classification coding (industry coding, geographic coding, size coding, etc.) was also performed by the computer. Imputation for missing items or for the small number of reports not received in time for tabulation was similarly accomplished by use of the computer. All such imputation was performed on an industry (or industry group)-State (or geographic group) basis utilizing all available response and/or administrative data. The data tapes were then tabulated to produce preliminary tabulations on an industry basis. These were subjected to analytical review and selected statistics were prepared for the preliminary reports. All such reports were reviewed before publication to insure they met publication standards and did not reveal confidential data for individual companies. Corrections resulting from this review were made to the computer records and more extensive final tabulations were produced. The data again underwent analytical review in preparation for the publication of the final reports.

The final reports contain considerably more data than were available in the preliminary reports. The final reports also incorporate all revisions and corrections made as a result of the review of the various preliminary reports. Oftentimes in reviewing a preliminary report for a given industry, it was discovered that corrections or revisions were required to the data for another industry for which the preliminary report had already been published. The final reports also incorporate all revisions and corrections discovered to date by the review for the final reports. Needed errata sheets will be issued for any significant corrections to this volume which may be discovered by subsequent review.

GEOGRAPHIC CLASSIFICATIONS

The 1972 Census of Construction Industries presents data classified by two basic types of geographic distributions. Each establishment is classified on the basis of its physical location (the State, the county, and the city in which the establishment is located). The report forms for employer establishments also requested data on the State location of construction work. Separate State codes were assigned based on this information.

In addition to presenting data classified by establishment location (final industry tables 1a and 7 and the final State publications) and by location of construction work (final industry table 9), the census also provides some data geographically cross-classified. For example, table 8 of the final industry reports presents data classified by (a) establishments doing construction work only in their "home State" and (b) establishments doing work in "home State" and in other States. "Home State" is defined as the State in which the establishment is physically located.

In addition to data presented on the location of construction establishments at the State level, results are also shown for each of the four Census regions and each of the nine Census geographic divisions. Data based on establishment location are not provided for at a more detailed level than State (i.e., standard metropolitan statistical area).

DUPLICATION IN RECEIPTS

The aggregate of construction receipts reported by all construction establishments in each of the several industry, State, or other groupings in this census contains varying amounts of duplication since the construction work (and the receipts) of one firm may in turn be subcontracted out to other construction firms and also be included in their receipts. To avoid this duplication a "net construction receipts" figure has been derived for each establishment by subtracting the payments made for construction work subcontracted to others from the construction receipts.

Duplication in receipts between construction and other industries results from the use of products of other industries as input materials by construction establishments. "Value added" avoids this duplication and is, for most purposes, the best measure for comparing the relative economic importance of industries or areas. "Value added" is defined in the 1972 Census of Construction Industries as equal to total receipts less payments for construction work subcontracted to others and payments for materials, components, and supplies. However, for SIC 6552 and SIC 1531 where land receipts are significant,

a modification was made in the calculation of value added. For these industries, value added is defined as equal to total receipts less land receipts, payments for construction work subcontracted to others, and payments for materials, components, and supplies.

CONFIDENTIALITY OF DATA

In accordance with Federal law governing census reports, such data are confidential. Reports may be seen only by sworn Census Bureau employees and may be used only for statistical purposes. The Bureau of the Census is prohibited from publishing any statistics that would disclose information reported by individual companies. Provisions for protecting this confidentiality are maintained throughout the processing of the reports and the tabulation of the data. All statistical tables for publication undergo disclosure analysis.

As a result of this analysis, figures for the 1972 census were suppressed if they would, by themselves, be direct disclosures. Other figures were also withheld, where necessary, to make it impossible to derive by subtraction the previously suppressed disclosures. In deciding which figures to suppress or to publish, certain rules were generally followed. Preference was given to geographic divisions over individual States in applying the disclosure rules. On tables showing industry detail, major 2-digit industry group totals were given preference over 3-digit industry group totals which, in turn, had preference over individual 4-digit industries. Such order of precedence was used because it was considered preferable to show divisional, regional or U.S. data for an industry, even at the cost of withholding data for some (usually the least significant) States.

It should be noted that the number of establishments in a kind of business is not considered a disclosure, so that this item may appear in instances where other items of information are withheld.

SPECIAL TABULATIONS

Special tabulations of data collected in the 1972 Census of Construction Industries may be obtained on computer tape, on punch cards, or in tabular form. The data provided in such special tabulations will be in summary form and will be subject to the rules prohibiting disclosure of confidential information (including name, address, kind of business, or other data for individual business establishments or companies).

Special tabulations are prepared on a cost basis and the request for a cost estimate, as well as exact and detailed specifications of the type and format of the data to be provided, should be directed to: Chief, Construction Statistics Division, Bureau of the Census, Washington, D.C. 20233.

**COMPARABILITY OF CONSTRUCTION CENSUS DATA
WITH OTHER SERIES**

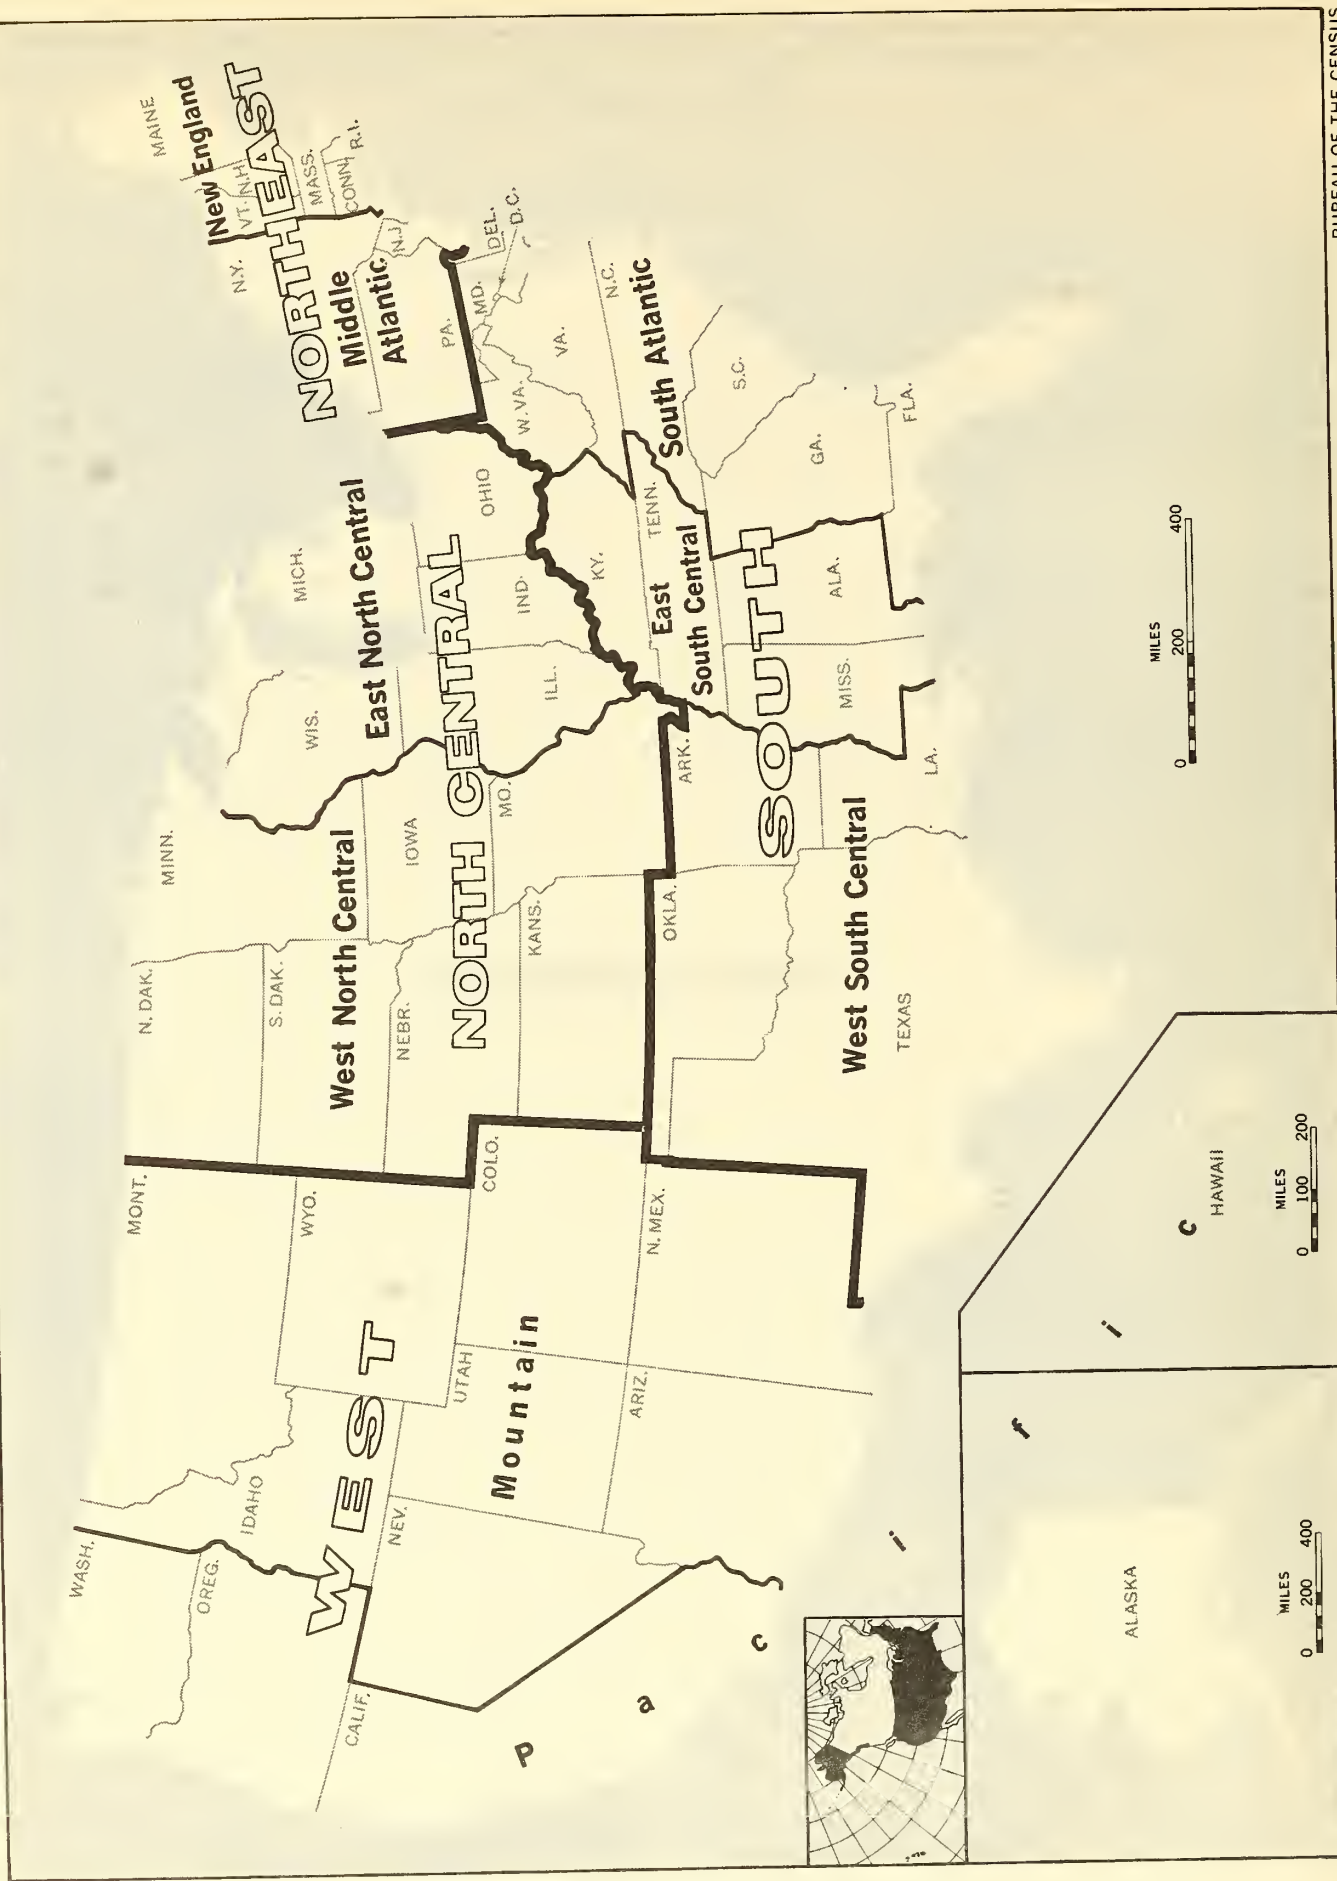

Data contained in the reports of the 1972 Census of Construction Industries are not the same as data published in the Census Bureau's C30 series of construction reports, *Value of New Construction Put in Place*. The main difference is that the C30 series covers all new construction put in place without regard to who is performing the construction activity whereas the census figures for net construction receipts cover data on both new construction and maintenance and repair work, but only for establishments classified in the construction industry. Force account construction activity (construction work performed by the labor force of a nonconstruction company for itself; or by other entities, i.e., Federal, State, or local governments for themselves; or performed by property owners for themselves) probably accounts for more than half of this difference. Other factors contributing to the difference are (1) the value of materials supplied by the

owners of projects is not included in the census; (2) the value of separate architectural and engineering services is excluded from the census; and, to a lesser extent, (3) the value of construction work performed for others by firms outside the scope of construction (manufacturers who install, lumber yards and other businesses, etc.) is not included in the census. In addition there are also other factors accounting for the lack of comparability.

Data contained in the reports of the census of construction industries also differ from industry data published in County Business Patterns (prepared by the Bureau of the Census with the assistance of the Social Security Administration), in the Bureau of Labor Statistics' *Employment and Earnings Statistics*, and in the Internal Revenue Service's *Statistics of Income*. These differences arise from differences in scope and coverage, timing, classification, and methods. The precise effect of each of these differences is not fully known.

Part A. Establishments With and Without Payroll

This part of the summary report provides limited data from the 1972 Census of Construction Industries for construction establishments with payroll (employers), for construction establishments with no payroll (nonemployers), and for the aggregate.

During 1972, 920,806 establishments in the United States operated primarily as general contractors, special trade contractors, operative builders, or subdividers and developers. These establishments had total receipts of \$164 billion and accounted for an average employment during the year of 4.1 million persons. In addition, the estimated number of proprietors and working partners totaled 748.3 thousand persons.

The greatest number of these establishments (653,325 or 71 percent) was primarily engaged in work as special trade contractors. There were 208,383 establishments or 23 percent classified as general building contractors and operative builders, 42,717 or 5 percent were heavy construction contractors, and 14,672 or 2 percent were subdividers and developers.

There were 482,865 or 52 percent of all construction establishments that were "nonemployers," but they accounted for only about 5 percent of the total receipts of all construction establishments. There were 437,941 or 48 percent of all construction establishments that were "employers" and they accounted for 95 percent of total receipts.

The majority of the "nonemployers" (384,343 establishments or 80 percent) were classified as special trade contractors. The receipts of these nonemployer special trade contractors amounted to \$5 billion or 57 percent of the total receipts for all nonemployer establishments.

Table A2 of this report provides a distribution of the data for industries and industry groups by total receipts size of establishments. There were 351,359 construction establishments or 38 percent that had total receipts of less than \$10,000 in 1972.

Only 9,575 construction establishments or less than 2 percent reported total receipts of \$2,500,000 or more. However, these 9,575 establishments accounted for \$72 billion in total receipts, or 44 percent of receipts of all construction establishments in 1972.

For the establishments without payroll, only information on total receipts was available from the administrative records. Therefore it is not possible to provide construction receipts or net construction receipts totals for the establishments without payroll or for all establishments. However, Part B of this report provides considerably more detailed information, including construction receipts and net construction receipts, for the establishments with payroll (employers). Construction receipts for the establishments with payroll amounted to \$149 billion of the \$156 billion in total receipts.

The 1972 estimates for establishments with payroll are based on a probability sample consisting of about 167,000 construction establishments in the United States. Statistics for nonemployers were based on data from administrative records of the Federal Government.

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. Data are included in underscored figures. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1.

NA Not available.

15 also include data for construction establishments not classified to 2-digit industry detail.

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. Data are included in underscored figures. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. % Standard error of estimate is greater than zero but less than 1.

NA Not available.

²Data for the establishments without payroll in the 6552 industry group may include data for an unknown number of cemetery subdividers and developers.

Part B. Establishments With Payroll

This part of the report summarizes data derived from the final reports already published for each of the industries covered by the 1972 Census of Construction Industries. Establishments have been classified in construction industries in accordance with industry definitions described in the 1972 edition of the Standard Industrial Classification (SIC) Manual.¹

A revised edition of the SIC Manual was issued in 1972 which includes extensive modifications to the construction industries. For those industries which underwent a major revision, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in tables B1 and B3.

During 1972 there were 437,941 establishments with payroll in the United States which were operating primarily as general contractors, special trade contractors, operative builders, or subdividers and developers. Total receipts of these establishments amounted to \$156 billion. Of this, \$149 billion were receipts for construction work. These establishments made payments for construction work subcontracted to others of \$38 billion, leaving net construction receipts of \$111 billion. Average employment in the industry totaled 4.1 million employees. Total payroll for 1972 amounted to \$40 billion.

The establishments in the construction industries made payments for purchased materials, components, and supplies of \$46 billion. This figure included payments for materials, components, and supplies purchased for use in construction work for others, purchased and subsequently provided to subcontractors for their use, purchased and then resold to others, and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are, of course, not included.

Establishments with 10 or more employees, while representing only 20 percent of the total number of employer establishments in the construction industries, accounted for 78 percent of total receipts.

Industry employment during the payroll period including March 12, 1972, amounted to 3.7 million employees, while employment for the pay period including August 12, 1972, was 4.5 million employees.

The 1972 estimates for establishments with payroll in all of the construction industries are based on a probability sample consisting of about 167,000 construction establishments. See the Introduction for a complete description of the sampling and estimating procedures used.

The general and detailed statistics are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary construction activities of the establishments in the industry, but also their secondary construction activities and, for that matter, their miscellaneous nonconstruction activities.

¹ Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual*, 1972.

U.S. SUMMARY Industry Series

Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972 (In Billions of Dollars)

||||| 1967 ■ 1972

GENERAL BUILDING CONTRACTORS AND OPERATIVE BUILDERS:

- Single-Family Houses and Operative Builders
- Residential Construction, N.E.C.
- Industrial Buildings and Warehouses
- Nonresidential Construction, N.E.C.

GENERAL CONTRACTORS:

- Highway and Street Construction
- Bridge, Tunnel, and Elevated Highways
- Water, Sewer, and Utility Lines
- Heavy Construction, N.E.C.

SPECIAL TRADE CONTRACTORS:

- Plumbing, Heating, Air Conditioning
- Painting, Paper Hanging, Decorating
- Electrical Work
- Masonry and Other Stonework
- Plastering, Drywall, and Insulation
- Terrazzo, Tile, Marble, Mosaic Work
- Carpentering
- Floor Laying and Floorwork, N.E.C.
- Roofing and Sheet Metal Work
- Concrete Work
- Water Well Drilling
- Structural Steel Erection
- Glass and Glazing Work
- Excavating and Foundation Work
- Wrecking and Demolition Work
- Installing Building Equipment, N.E.C.
- Special Trade Contractors, N.E.C.

SUBDIVIDERS AND DEVELOPERS

BILLIONS OF DOLLARS

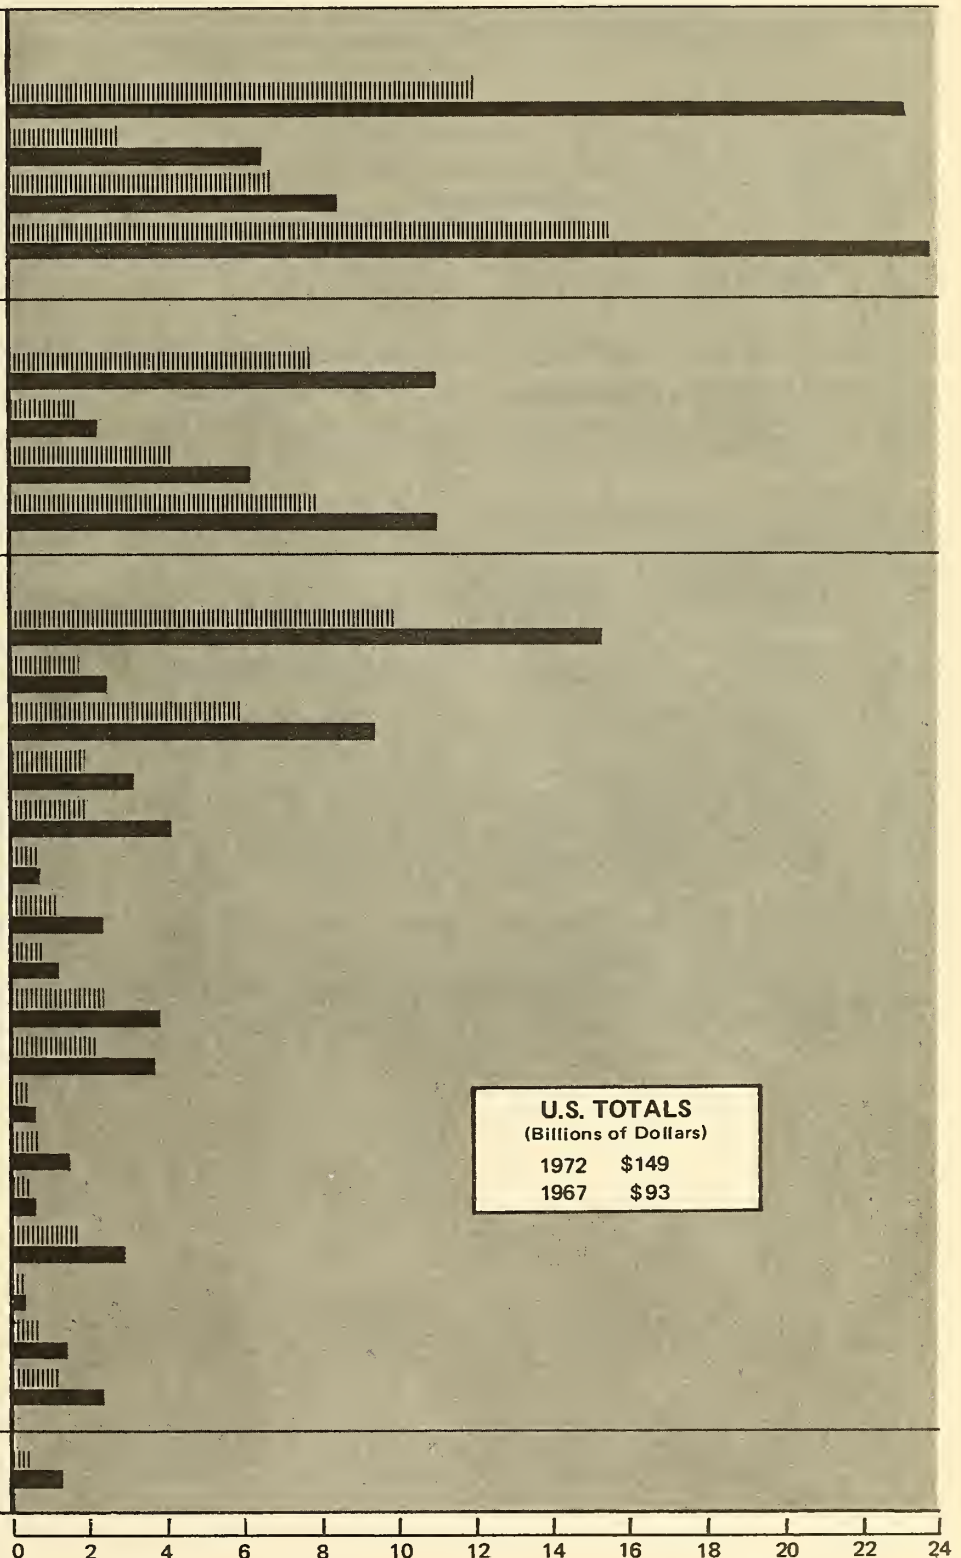

TABLE B1. General Statistics by Industry Groups and

(Dollar figures in thousands. Detailed figures may not add to

1972 SIC code	Industry group and industry	1972							
		Total number of establish- ments	Number of employees		Payroll		Receipts during year		Net construction receipts (G-J)
			All employees (average)	Construction workers (average)	Total payroll	Construction workers	Total receipts	Total construction receipts

Note: Some of the 1972 industry definitions are different from those used in 1967. Where applicable, the 1967 data shown in this table were developed by retabulating the original information to approximate the new industry definitions.

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

Combined because of misclassification problems within these two industries. See Industry Series Report C72-I-2, "General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531)."

Industries, for Establishments With Payroll: 1972 and 1967

totals because of independent rounding or dropping of fractions)

1972—Continued							1967			Standard error of estimates			1972 SIC code
Selected payments		Value added (F-I-J)	Total capital expenditures other than land	Depreciable assets		Rental payments for machinery and equipment	All employees (average)	Total construction receipts	Value added				
Materials, components, and supplies	Construction work sub-contracted to others			Gross book value at end of year	Net value at end of year

²"Value added" equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$1,432,057(000) and for SIC 6552 were \$1,596,510(000).

³Not comparable to the SIC 1521 and SIC 1531 industry report because land receipts were not taken into consideration when calculating value added for each State. In 1967 land receipts amounted to \$620,935(000).

⁴Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

TABLE B2. Detailed Statistics for Establishments With Payroll: 1972

(Detailed figures may not add to totals because of independent rounding or dropping of fractions)

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

¹Does not include data for Subdividers and Developers, N.E.C. (SIC 6552).

TABLE B9. Participation in Construction Work in Home State and in Other States, by Industry Groups and Industries, for Establishments With Payroll: 1972

(Dollar figures in thousands. Detailed figures may not add to totals because of independent rounding or dropping of fractions)

Standard Notes: - Represents zero.

D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals.

S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review.

Z Standard error of estimate is greater than zero but less than 1%.

Home State--in which reporting establishment is physically located.

Other State--in which construction work is performed although reporting establishment is not physically located there.

Combined because of misclassification problems within these two industries. See Industry Series Report C72-1-2, "General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531)."

General Contractors—Single-Family Houses and Operative Builders

SIC 1521 and SIC 1531

This report provides 1972 Census of Construction Industries statistics for establishments with payroll classified in industry 1521, General Contractors—Single-Family Houses, and industry 1531, Operative Builders.

The General Contractors—Single-Family Houses industry includes general contractor establishments primarily engaged in the construction (including new work, additions, alterations, remodeling, and repair) of single-family houses, including rowhouses and townhouses. The Operative Builders industry includes establishments primarily engaged in construction of single-family houses and other buildings for sale on their own account rather than as contractors. This industry includes speculative builders and condominium developers. A complete description of these industries may be found in the 1972 edition of the Standard Industrial Classification (SIC) Manual.¹

See the technical notes on the next page for the reasons these industries have been combined.

During 1972, there were 90,207 establishments with payroll classified in these industries. Total receipts of these establishments amounted to \$25.1 billion, of which \$23.2 billion were receipts for construction work, an increase of 93 percent compared with 1967. Payments for construction work subcontracted to others amounted to \$8.9 billion, leaving net construction receipts of about \$14.3 billion. Total average employment in these industries showed an increase of 53 percent from 1967 to 469.2 thousand employees. Total payroll for 1972 amounted to \$3.5 billion. In 1972, value added was \$7.1 billion, 81 percent more than value added in 1967.

Establishments in these industries paid \$7.7 billion for materials, components, and supplies. This included payments for materials, components, and supplies purchased for use in construction work for others, provided to subcontractors for their use, resold to others, and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Establishments with 10 or more employees, while representing only 11 percent of the total number of employer establishments in these industries, accounted for 54 percent of total receipts.

Industry employment during the payroll period including March 12, 1972, was 416.0 thousand employees, while employment for the pay period including August 12, 1972, was 504.6 thousand employees.

The 1972 estimates for establishments with payroll in all of the construction industries are based on a probability sample consisting of about 167,000 construction establishments. The estimates for these particular industries are based on a sample of about 29,300 establishments.

The general and detailed statistics reported for an industry reflect not only the primary construction activities of establishments in the industry, but also their secondary construction activities, as well as their miscellaneous nonconstruction activities.

¹ Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual*, 1972.

Technical Notes

The statistics for establishments classified under the Standard Industrial Classification (SIC) codes 1521 and 1531 are combined in this report because some establishments classified and tabulated as "General Contractors—Single-Family Houses" (SIC 1521) should have been classified and tabulated as "Operative Builders" (SIC 1531).

In the 1967 Census of Construction Industries, general contractor establishments primarily engaged in work on single-family houses were classified under the SIC code 1511, "General Building Contractors." The 1967 classification was so broad in scope that it was not possible to compare the data for this industry classification with statistics from current construction surveys. For the 1972 Census of Construction Industries, the old 1511 classification was divided into four new general contractor classifications: General Contractors—Single-Family Houses (SIC 1521), General Contractors—Other Residential Buildings (SIC 1522), General Contractors—Industrial Buildings and Warehouses (SIC 1541), and General Contractors—Other Nonresidential Buildings (SIC 1542). We then reclassified the establishments in SIC 1511 in 1967 and retabulated the more important statistics to derive approximate 1967 totals under the 1972 industry classifications. When we compared the results of the 1972 preliminary data with the reclassified results from the 1967 data, in SIC 1521, for example, we found that the data were comparable over the five-year period.

In reviewing the *final* Industry Series reports, we compared the statistics from the 1972 census with the equivalent statistics from current construction activity surveys conducted by the Census Bureau. From the current surveys, we knew that 718,000 new homes were sold in 1972 at an average sales price of \$30,500 at the United States level. This suggested that receipts of approximately \$22 billion were taken in by operative (speculative) builders on land owned by the builders. This estimate was more than twice the estimate made from preliminary construction census results of \$9 billion for SIC 1531. From current surveys we also estimated that 252,000 contractor-built homes were built in 1972. At an average contract price of \$25,300 per unit, receipts by general contractors were about \$6 billion for homes built on the owner's land for the owner's occupancy—less than half of the preliminary census estimate of \$14 billion for SIC 1521. Current survey data were taken from construction report C25-72-13, **Characteristics of New One-Family Homes: 1972**, issued August 1973.

Owing to discrepancies between current survey information and 1972 census results, a sample of 401 establishments was reinterviewed in an effort to determine the extent of this classification problem. The results are:

Receipts size class	Number of establishments reinterviewed	Establishments correctly classified as general contractors		Establishments reclassified as operative builders	
		Number	Percent	Number	Percent
Total	401	288	71.8	¹ 113	28.2
\$5.0 million or more . .	99	43	43.4	56	56.6
\$1.0 to \$4.9 million . . .	45	22	48.9	23	51.1
\$0.5 to \$0.9 million . . .	40	28	70.0	12	30.0
Less than \$0.5 million .	217	195	89.9	22	10.1

¹ Includes a few establishments that were neither general contractors nor operative builders.

Technical Notes – Continued

The results of the reinterview indicated that there may have been a significant problem in the original classification of establishments in these industries. Each establishment receiving an original questionnaire was asked to show the kind-of-business activities engaged in during 1972. If an establishment had been engaged in multiple business activities, we asked for a ranking by total receipts. This information was used in making the appropriate industry classification. The wording of the self-determining classification inquiry on the 1972 questionnaire appears to have been misunderstood by many respondents in these industries with the result that some establishments were assigned to the wrong SIC.

The 1967 construction census was the first such census conducted in almost 30 years. With the cooperation of trade associations, private industry, and other government agencies, we tried to develop certain terms and expressions that we believed were generally understood and accepted within the construction industries. We used the same wording in the construction census for 1972.

Owing to lack of time and money, we did not attempt a complete reinterview of all the establishments to obtain more accurate classifications for each of these two industries. Rather, we used the 401 sample cases to estimate the contribution of each individual SIC. Selected statistics at the United States level only are shown below:

Item	SIC's 1521/1531				Standard error of estimate (percent)		
	Unit indicator	Total	1521	1531	Total	1521	1531

¹Total receipts less land receipts, payments for construction work subcontracted to others, and payments for materials, components, and supplies. In 1972, land receipts amounted to \$1,432,057,000.²Not strictly comparable for each State with value added for 1972, because land receipts for SIC 1521 were not taken into consideration when calculating value added for each State. For the United States, land receipts for SIC 1521 were \$140,380,000 and for SIC 1531, \$480,555,000.

**TABLE 1b. Data for 1972 Showing Composition of New Standard Industrial Classification
Industries Based on Old Standard Industrial Classification**

(Table 1b is omitted since all establishments classified in industries 1521 and 1531, based on the 1972 SIC manual, were classified in industries 1511 and 6561 respectively, based on the 1967 SIC manual)

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

^a Sampling error is greater than 40%.

General Contractors—Residential Buildings, Other Than Single Family

SIC 1522

The General Contractors—Residential Buildings, Other Than Single Family industry includes general contractor establishments primarily engaged in the construction (including new work, additions, alterations, remodeling, and repair) of apartment buildings, hotels, motels, and dormitories. A complete description of the industry may be found in the 1972 edition of the Standard Industrial Classification (SIC) Manual.¹

In the 1972 edition of the SIC Manual, old Industry 1511, General Building Contractors, was split into four new industries, one of which is Industry 1522, General Contractors—Residential Buildings Other Than Single Family. Based on the data available in the 1967 census record, selected 1967 information was retabulated to approximate the new industry totals.

During 1972 there were 7,651 establishments with payroll classified in this industry. Total receipts of these establishments amounted to \$6.5 billion. Of this, \$6.4 billion were receipts for construction work, an increase of 137 percent compared with 1967. Their payments for construction work subcontracted to others amounted to \$3.4 billion, leaving net construction receipts of about \$3.0 billion. Total average employment in the industry showed an increase of 83 percent from 1967 to a total of 112.2 thousand employees. Total payroll for 1972 amounted to \$978 million. Value added at \$1.6 billion in 1972 was 128 percent more than value added in 1967.

The establishments in this industry made payments of \$1.6 billion for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others, purchased and subsequently provided to subcontractors for their use, purchased and then resold to others, and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are, of course, not included.

Establishments with 10 or more employees, while representing only 31 percent of the total number of employer establishments in this industry, accounted for 85 percent of total receipts.

Industry employment during the payroll period including March 12, 1972, amounted to 98.4 thousand employees, while employment for the pay period including August 12, 1972, was 121.3 thousand employees.

The 1972 estimates for establishments with payroll in all of the construction industries are based on a probability sample consisting of about 167,000 construction establishments. The estimates for this particular industry are based on a sample of about 4,100 establishments.

The general and detailed statistics are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary construction activities of the establishments in the industry, but also their secondary construction activities and, for that matter, their miscellaneous nonconstruction activities.

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

^aSampling error is greater than 40%.

¹Home State--in which reporting establishment is physically located.

²Other State--in which construction work is performed although reporting establishment is not physically located there.

4	Selected Statistics by Total Receipts Size of Establishments With Payroll: 1972	8
5	Construction Receipts by Type of Construction and Industry, for Establishments With Payroll: 1972 and 1967	9
6	Construction Receipts Showing Distribution by Class of Construction and by Ownership of Construction Projects, for Establishments With Payroll: 1972 and 1967	9
7	Number of Employees by Type, for Selected Periods, and Payroll, by Geographic Areas for Establishments With Payroll: 1972	10
8	Participation in Construction Work in Home State and in Other States, by Location of Reporting Establishments With Payroll: 1972	12
9	Construction Receipts Showing Distribution by Location of Construction Work for Establish- ments With Payroll: 1972 and 1967	13

General Contractors—Industrial Buildings and Warehouses

SIC 1541

The General Contractors—Industrial Buildings and Warehouses industry includes general contractor establishments primarily engaged in construction (including new work, additions, alterations, remodeling, and repair) of industrial buildings and warehouses such as aluminum plants, automobile assembly plants, pharmaceutical manufacturing plants, and commercial warehouses. It includes construction of factory buildings, cold storage plants, grain elevators, and industrial plants. General contractors of nonresidential buildings other than industrial buildings and warehouses are classified in industry 1542. A complete description of the industry may be found in the 1972 edition of the Standard Industrial Classification (SIC) Manual.¹

In the 1972 edition of the SIC Manual, old industry 1511, General Building Contractors, was split into four new industries, one of which is industry 1541, General Contractors—Industrial Buildings and Warehouses. Based on the data available in the 1967 census record, selected 1967 information was retabulated to approximate the new industry totals.

During 1972, there were 9,538 establishments with payroll classified in this industry. Total receipts of these establishments amounted to \$8.7 billion. Of this, \$8.5 billion were receipts for construction work, an increase of 27 percent compared with 1967. Their payments for construction work subcontracted to others amounted to \$3.7 billion, leaving net construction receipts of about \$4.8 billion. Total average employment in the industry showed a decrease of 6 percent from 1967 to a total of 173.1 thousand employees. Total payroll for 1972 amounted to \$1.7 billion. Value added at \$2.8 billion in 1972 was 30 percent more than value added in 1967.

The establishments in this industry made payments of \$2.2 billion for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others, purchased and subsequently provided to subcontractors for their use, purchased and then resold to others, and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are, of course, not included.

Establishments with 10 or more employees, while representing only 37 percent of the total number of employer establishments in this industry, accounted for 87 percent of total receipts.

Industry employment during the payroll period including March 12, 1972, amounted to 157.5 thousand employees, while employment for the pay period including August 12, 1972, was 185.3 thousand employees.

The 1972 estimates for establishments with payroll in all of the construction industries are based on a probability sample consisting of about 167,000 construction establishments. The estimates for this particular industry are based on a sample of about 5,100 establishments.

The general and detailed statistics are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary construction activities of the establishments in the industry, but also their secondary construction activities and, for that matter, their miscellaneous nonconstruction activities.

¹ Executive Office of the President, Office of Management and Budget, **Standard Industrial Classification Manual**, 1972.

Construction Receipts by State: 1972 (Location of Establishment)

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

¹1967 data are not available. This industry was part of SIC 1511 in 1967 and detailed data were not retabulated.

General Contractors—Nonresidential Buildings, Other Than Industrial Buildings and Warehouses

SIC 1542

The General Contractors — Nonresidential Buildings, Other Than Industrial Buildings and Warehouses, industry includes general contractor establishments primarily engaged in construction (including new work, additions, alterations, remodeling, and repair) of commercial, institutional, religious, and amusement and recreational buildings. The construction of shopping centers, hospitals, schools, administrative and office buildings, nonresidential farm buildings, and service stations and garages is included in this industry. General contractors of industrial buildings and warehouses are classified in industry 1541. A complete description of this industry may be found in the 1972 edition of the Standard Industrial Classification (SIC) Manual.¹

In the 1972 edition of the SIC Manual, old industry 1511, General Building Contractors, was split into four new industries, one of which is industry 1542. Based on the data available in the 1967 census record, selected 1967 information was retabulated to approximate the new industry totals.

During 1972, there were 25,658 establishments with payroll classified in this industry. Total receipts of these establishments amounted to \$24.0 billion. Of this, \$23.8 billion were receipts for construction work, an increase of 54 percent compared with 1967. Their payments for construction work subcontracted to others amounted to \$12.6 billion, leaving net construction receipts of about \$11.1 billion. Total average employment in the industry showed an increase of 3 percent from 1967 to a total of 395.1 thousand employees. Total payroll for 1972 amounted to \$4.0 billion. Value added at \$6.5 billion in 1972 was 56 percent more than value added in 1967.

The establishments in this industry made payments of \$4.9 billion for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others, purchased and subsequently provided to subcontractors for their use, purchased and then resold to others, and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are, of course, not included.

Establishments with 10 or more employees, while representing only 30 percent of the total number of employer establishments in this industry, accounted for 89 percent of total receipts.

Industry employment during the payroll period including March 12, 1972, amounted to 352.9 thousand employees, while employment for the pay period including August 12, 1972, was 427.6 thousand employees.

The 1972 estimates for establishments with payroll in all of the construction industries are based on a probability sample consisting of about 167,000 construction establishments. The estimates for this particular industry are based on a sample of about 12,500 establishments.

The general and detailed statistics are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary construction activities of the establishments in the industry, but also their secondary construction activities and, for that matter, their miscellaneous nonconstruction activities.

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

for Establishments With Payroll: 1972 and 1967

because of independent rounding or dropping of fractions)

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

Highway and Street Construction Contractors

SIC 1611

The Highway and Street Construction Contractors industry includes general contractor establishments primarily engaged in the construction of roads, streets, alleys, sidewalks, guardrails, parkways, parking areas, airports, and athletic fields. Special Trade Contractors engaged in the construction of private driveways are classified in industry 1771. Industry 1611 also includes establishments engaged in the construction of golf courses, tennis courts, bridle paths, and trailer camps. A complete description of the industry may be found in the 1972 edition of the Standard Industrial Classification (SIC) Manual.¹

The code number for this industry in the 1972 revision of the SIC Manual is unchanged, but the content of the industry has been significantly changed from the previous classification system. Contractors primarily engaged in light construction work involving sewage and waterworks improvements incidental to highway and street construction were previously classified in industry 1611, but are now included in industry 1623. Likewise, contractors primarily engaged in swimming pool construction and in fence construction were previously classified in industry 1611, but are now included in industry 1799. Special trades contractors primarily engaged in work related to highway and street construction formerly were classified in industry 1611, but are now included in their own primary industries (1731, 1751, 1771, 1794, etc.). Based on the data available in the 1967 census record, selected 1967 information was retabulated to approximate the new industry totals.

During 1972, there were 9,232 establishments with payroll classified in this industry. Total receipts of these establishments amounted to \$11.3 billion. Of this, \$11.0 billion were receipts for construction work, an increase of 43 percent compared with 1967. Their payments for construction work subcontracted to others amounted to \$2.0 billion, leaving net construction receipts of about \$9.0 billion. Total average employment in the industry showed an increase of 9 percent from 1967 to a total of 278.1 thousand employees. Total payroll for 1972 amounted to \$2.8 billion. Value added at \$5.8 billion in 1972 was 49 percent more than value added in 1967.

The establishments in this industry made payments of \$3.5 billion for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others, purchased and subsequently provided to subcontractors for their use, purchased and then resold to others, and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are, of course, not included.

Establishments with 10 or more employees, while representing only 46 percent of the total number of employer establishments in this industry, accounted for 95 percent of total receipts.

Industry employment during the payroll period including March 12, 1972, amounted to 202.4 thousand employees, while employment for the pay period including August 12, 1972, was 339.5 thousand employees.

The 1972 estimates for establishments with payroll in all of the construction industries are based on a probability sample consisting of about 167,000 construction establishments. The estimates for this particular industry are based on a sample of about 5,200 establishments.

The general and detailed statistics are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary construction activities of the establishments in the industry, but also their secondary construction activities and, for that matter, their miscellaneous nonconstruction activities.

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

^aSampling error is greater than 40%.

¹For 1972, over 30% of the data was estimated.

for Establishments With Payroll: 1972 and 1967

because of independent rounding or dropping of fractions)

1972-Continued							1967			Standard error of estimates			Establishment location
Selected payments		Value added (F-I-J)	Total capital expenditures other than land	Depreciable assets		Rental payments for machinery and equipment	All employees (average)	Total construction receipts	Value added				
Materials, components, and supplies	Construction work sub-contracted to others			Gross book value at end of year	Net value at end of year

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

^a Sampling error is greater than 40%.

^b Over 30% of the data was estimated.

Bridge, Tunnel, and Elevated Highway Construction Contractors

SIC 1622

The Bridge, Tunnel, and Elevated Highway Construction Contractors industry includes general contracting establishments primarily engaged in the construction of heavy projects, such as bridges, viaducts, and elevated highways; and highway, pedestrian, and railway tunnels. General contractors primarily engaged in subway construction are classified in industry 1629. A complete description of the industry may be found in the 1972 edition of the Standard Industrial Classification (SIC) Manual.¹

In the 1972 edition of the SIC Manual, new industry 1622, Bridge, Tunnel, and Elevated Highway Construction, was derived from a part of old industry 1621, Heavy Construction Except Highway and Street Construction. Based on the data available in the 1967 census record, selected 1967 information was retabulated to approximate the new industry totals.

During 1972 there were 1,294 establishments with payroll classified in this industry. Total receipts of these establishments amounted to \$2,282 million. Of this amount, \$2,233 million were receipts for construction work, an increase of 39 percent compared with 1967. Their payments for construction work subcontracted to others amounted to \$453 million, leaving net construction receipts of about \$1,780 million. Total average employment in the industry showed a decrease of 5 percent from 1967 to a total of 53.7 thousand employees. Total payroll for 1972 amounted to \$590 million. Value added at \$970 million in 1972 was 30 percent more than value added in 1967.

The establishments in this industry made payments of \$859 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others, purchased and subsequently provided to subcontractors for their use, purchased and then resold to others, and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are, of course, not included.

Establishments with 10 or more employees, while representing only 55 percent of the total number of employer establishments in this industry, accounted for 96 percent of total receipts.

Industry employment during the payroll period including March 12, 1972, amounted to 46.2 thousand employees while employment for the pay period including August 12, 1972, was 60.5 thousand employees.

The 1972 estimates for establishments with payroll in all of the construction industries are based on a probability sample consisting of about 167,000 construction establishments. The estimates for this particular industry are based on a sample of about 800 establishments.

The general and detailed statistics are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary construction activities of the establishments in the industry, but also their secondary construction activities and, for that matter, their miscellaneous nonconstruction activities.

Water, Sewer, Pipe Line, Communication and Power Line Construction Contractors

SIC 1623

The Water, Sewer, Pipe Line, Communication and Power Line Construction industry includes general contractors primarily engaged in the construction of pipe lines, communication and power lines, and sewer and water mains. It also includes construction of pumping stations, television and radio towers, and telephone line construction. A complete description of the industry may be found in the 1972 edition of the Standard Industrial Classification (SIC) Manual.¹

In the 1972 edition of the SIC Manual, new industry 1623 was derived from parts of old industry 1611, Highway and Street Construction, Except Elevated Highways, and old industry 1621, Heavy Construction, Except Highway and Street Construction. Based on the data available in the 1967 census record, selected 1967 information was retabulated to approximate the new industry totals.

During 1972 there were 9,355 establishments with payroll classified in this industry. Total receipts of these establishments amounted to \$6,370 million. Of this, \$6,227 million were receipts for construction work, an increase of 47 percent compared with 1967. Their payments for construction work subcontracted to others amounted to \$599 million, leaving net construction receipts of about \$5,628 million. Total average employment in the industry showed an increase of 12 percent from 1967 to a total of 209.3 thousand employees. Total payroll for 1972 amounted to \$2,154 million. Value added at \$3,870 million in 1972 was 49 percent more than value added in 1967.

The establishments in this industry made payments of \$1,900 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others, purchased and subsequently provided to subcontractors for their use, purchased and then resold to others, and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are, of course, not included.

Establishments with 10 or more employees, while representing only 42 percent of the total number of employer establishments in this industry, accounted for 91 percent of total receipts.

Industry employment during the payroll period including March 12, 1972, amounted to 180.4 thousand employees, while employment for the pay period including August 12, 1972, was 233.2 thousand employees.

The 1972 estimates for establishments with payroll in all of the construction industries are based on a probability sample consisting of about 167,000 construction establishments. The estimates for this particular industry are based on a sample of about 4,600 establishments.

The general and detailed statistics are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary construction activities of the establishments in the industry, but also their secondary construction activities and, for that matter, their miscellaneous nonconstruction activities.

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

^a Sampling error is greater than 40%.

for Establishments With Payroll: 1972 and 1967

because of independent rounding or dropping of fractions)

1972-Continued							1967			Standard error of estimates (percent)			Establishment location

TABLE 1b. Data for 1972 Showing Composition of New Standard Industrial Classification Industries Based on Old Standard Industrial Classification

(Dollar figures in thousands. Detailed figures may not add to totals because of independent rounding or dropping of fractions)

Industry codes and titles	Total number of establishments	All employees (average)	Total payroll	Total receipts	Total construction receipts	Value added
	A	B	C	D	E	F
ESTABLISHMENTS CLASSIFIED ACCORDING TO THE 1972 SIC MANUAL:						
1623-WATER, SEWER, PIPE LINE, COMMUNICATION AND POWER LINE CONSTRUCTION	9,355	209,318	2,154,000	6,369,576	6,227,482	3,869,700
SAME ESTABLISHMENTS CLASSIFIED ACCORDING TO THE 1967 SIC MANUAL:						
1611-HIGHWAY AND STREET CONSTRUCTION.....	1,242	22,468	242,528	737,388	696,220	420,989
1621-HEAVY CONSTRUCTION, N.E.C.....	8,113	186,850	1,911,472	5,632,188	5,531,262	3,448,711

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

TABLE 2. Detailed Statistics for Establishments With Payroll: 1972 and 1967

(Detailed figures may not add to totals because of independent rounding or dropping of fractions)

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

^aSampling error is greater than 40%.

Heavy Construction Contractors, Not Elsewhere Classified

SIC 1629

The Heavy Construction Contractors, Not Elsewhere Classified, industry includes general contractors primarily engaged in the construction of heavy projects, not elsewhere classified, such as construction of chemical complexes, dams, reservoirs, harbor and port facilities, missile facilities, oil refineries, subways, water and sewage treatment plants, light and power plants, industrial ovens and incinerators, flood control projects, and dredging and demolition contractors. A complete description of the industry may be found in the 1972 edition of the Standard Industrial Classification (SIC) Manual.¹

In the 1972 edition of the SIC Manual, new industry 1629, Heavy Construction, Not Elsewhere Classified, was derived from parts of old industries 1511, General Building Contractors; 1611, Highway and Street Construction, Except Elevated Highways; and 1621, Heavy Construction, Except Highway and Street Construction. Based on the data available in the 1967 census record, selected 1967 information was retabulated to approximate the new industry totals.

During 1972, there were 8,110 establishments with payroll classified in this industry. Total receipts of these establishments amounted to \$11.5 billion. Of this, \$11.0 billion were receipts for construction work, an increase of 38 percent compared with 1967. Their payments for construction work subcontracted to others amounted to \$2.1 billion, leaving net construction receipts of about \$9.0 billion. Total average employment in the industry showed a decrease of 2 percent from 1967 to a total of 286.2 thousand employees. Total payroll for 1972 amounted to \$3.7 billion. Value added at \$5.5 billion in 1972 was 33 percent more than value added in 1967.

The establishments in this industry made payments of \$3.9 billion for purchased materials, components, and supplies. This figure included payments for material, components, and supplies purchased for use in construction work for others, purchased and subsequently provided to subcontractors for their use, purchased and then resold to others, and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are, of course, not included.

Establishments with 10 or more employees, while representing only 27 percent of the total number of employer establishments in this industry, accounted for 96 percent of total receipts.

Industry employment during the payroll period including March 12, 1972, amounted to 267.1 thousand employees, while employment for the pay period including August 12, 1972, was 299.5 thousand employees.

The 1972 estimates for establishments with payroll in all of the construction industries are based on a probability sample consisting of about 167,000 construction establishments. The estimates for this particular industry are based on a sample of about 3,700 establishments.

The general and detailed statistics are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary construction activities of the establishments in the industry, but also their secondary construction activities and, for that matter, their miscellaneous nonconstruction activities.

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

^a Sampling error is greater than 40%.

for Establishments With Payroll: 1972 and 1967

because of independent rounding or dropping of fractions)

1972-Continued							1967			Standard error of estimates			Establishment location
Selected payments		Value added (F-I-J)	Total capital expenditures other than land	Depreciable assets		Rental payments for machinery and equipment	All employees (average)	Total construction receipts	Value added				
Materials, components, and supplies	Construction work sub-contracted to others			Gross book value at end of year	Net value at end of year

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

^aSampling error is greater than 40%.

Plumbing, Heating (Except Electric), and Air Conditioning Special Trade Contractors

SIC 1711

The Plumbing, Heating (Except Electric), and Air Conditioning Special Trade Contractors industry includes establishments primarily engaged in plumbing, heating (except electric), or air conditioning work, or any combination of these types of work. Sheet metal work combined with any of these types of work is included in this industry, but roofing and sheet metal contractors are classified in industry 1761. This industry (1711) includes mechanical contractors, steam fitting contractors, ventilating work contractors, refrigeration contractors, boiler erection contractors, furnace repair contractors, fuel oil burner installation and servicing contractors, cesspool construction contractors, and plumbing repair contractors. It also includes establishments engaged in the installation of sprinkler systems, septic tanks, and sump pump and water pump installation and servicing. Electric heating contractors are classified in SIC 1731. A complete description of this industry may be found in the Standard Industrial Classification (SIC) Manual.¹

The identifying code number for this industry has not been changed from that used in the previous classification system, and the content of the industry in both the previous and 1972 edition of the SIC Manual is virtually unchanged. Therefore, the 1967 data shown for this industry have not been revised.

During 1972, there were 53,301 establishments with payroll classified in this industry. Total receipts of these establishments amounted to \$15.6 billion. Of this, \$15.3 billion were receipts for construction work, an increase of 54 percent compared with 1967. Their payments for construction work subcontracted to others amounted to \$1.7 billion, leaving net construction receipts of about \$13.6 billion. Total average employment in the industry showed an increase of 24 percent from 1967 to a total of 456.1 thousand employees. Total payroll for 1972 amounted to \$4.8 billion. Value added at \$7.8 billion in 1972 was 64 percent more than value added in 1967.

The establishments in this industry made payments of \$6.1 billion for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others, purchased and subsequently provided to subcontractors for their use, purchased and then resold to others, and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are, of course, not included.

Establishments with 10 or more employees, while representing only 21 percent of the total number of employer establishments in this industry, accounted for 75 percent of total receipts.

Industry employment during the payroll period including March 12, 1972, amounted to 425.5 thousand employees, while employment for the pay period including August 12, 1972, was 471.9 thousand employees.

The 1972 estimates for establishments with payroll in all of the construction industries are based on a probability sample consisting of about 167,000 construction establishments. The estimates for this particular industry are based on a sample of about 19,400 establishments.

The general and detailed statistics are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary construction activities of the establishments in the industry, but also their secondary construction activities and, for that matter, their miscellaneous nonconstruction activities.

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

Painting, Paper Hanging, and Decorating Special Trade Contractors

SIC 1721

The Painting, Paper Hanging, and Decorating Special Trade Contractors industry includes establishments primarily engaged in interior and exterior painting (except roofs), paper hanging, and decorating. This industry also includes whitewashing contractors, traffic lane painting contractors, and ship painting contractors. This industry does not include stores furnishing interior decorating services, which are classified in major group 57, nor interior decorators without stocks (industry 7399). Establishments primarily engaged in roof spraying, painting, or coating are classified in industry 1761. A complete description of this industry may be found in the Standard Industrial Classification (SIC) Manual.¹ The code number as well as the definition are unchanged from the previous (1967) classification system.

During 1972 there were 29,011 establishments with payroll classified in this industry. Total receipts of these establishments amounted to \$2,406 million. Of this, \$2,382 million were receipts for construction work, an increase of 35 percent compared with 1967. Their payments for construction work subcontracted to others amounted to \$92 million, leaving net construction receipts of about \$2,290 million. Total average employment in the industry showed a decrease of 2 percent from 1967 to a total of 136.6 thousand employees. Total payroll for 1972 amounted to \$1,081 million. Value added at \$1,839 million in 1972 was 35 percent more than value added in 1967.

The establishments in this industry made payments of \$475 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others, purchased and subsequently provided to subcontractors for their use, purchased and then resold to others, and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are, of course, not included.

Establishments with 10 or more employees, while representing only 10 percent of the total number of employer establishments in this industry, accounted for 54 percent of total receipts.

Industry employment during the payroll period including March 12, 1972, amounted to 113.4 thousand employees while employment for the pay period including August 12, 1972, was 153.5 thousand employees.

The 1972 estimates for establishments with payroll in all of the construction industries are based on a probability sample consisting of about 167,000 construction establishments. The estimates for this particular industry are based on a sample of about 8,400 establishments.

The general and detailed statistics are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary construction activities of the establishments in the industry, but also reflect their secondary construction activities and, for that matter, their miscellaneous nonconstruction activities.

¹ Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual*, 1972 .

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%. ^a Sampling error is greater than 40%.

¹State in which reporting establishment is physically located. ²State in which construction work is performed although reporting establishment is not physically located there. ³For 1972, over 30% of the data was estimated.

Electrical Work Special Trade Contractors

SIC 1731

The Electrical Work Special Trade Contractors industry includes establishments primarily engaged in electrical work at the site. It also includes electric heating contractors and establishments engaged in the installation of intercommunication equipment, sound equipment, burglar alarms, fire alarms, and telephones. It does not include establishments primarily engaged in the construction of transmission lines (industry 1623) nor electrical work carried on in repair shops (group 762). A complete description of this industry may be found in the Standard Industrial Classification (SIC) Manual.¹

The code number for this industry in the 1972 revision of the SIC Manual is unchanged, but the content of the industry has been changed from the previous classification system. Electrical work special trade contractors primarily engaged in work related to highway and street construction, or heavy or engineering construction, were previously classified in industries 1611 and 1621, respectively, but now are included in this industry. Based on the data available in the 1967 census record, selected 1967 information was retabulated to approximate the new industry totals.

During 1972, there were 32,455 establishments with payroll classified in this industry. Total receipts of these establishments amounted to \$9,608 million. Of this, \$9,449 million were receipts for construction work, an increase of 60 percent compared with 1967. Their payments for construction work subcontracted to others amounted to \$220 million, leaving net construction receipts of about \$9,229 million. Total average employment in the industry showed an increase of 22 percent from 1967 to a total of 324 thousand employees. Total payroll for 1972 amounted to \$3,793 million. Value added at \$5,797 million in 1972 was 68 percent more than value added in 1967.

The establishments in this industry made payments of \$3,592 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others, purchased and subsequently provided to subcontractors for their use, purchased and then resold to others, and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are, of course, not included.

Establishments with 10 or more employees, while representing only 23 percent of the total number of employer establishments in this industry, accounted for 78 percent of total receipts.

Industry employment during the payroll period including March 12, 1972, amounted to 302 thousand employees, while employment for the pay period including August 12, 1972, was 338 thousand employees.

The 1972 estimates for establishments with payroll in all of the construction industries are based on a probability sample consisting of about 167,000 construction establishments. The estimates for this particular industry are based on a sample of about 12,300 establishments.

The general and detailed statistics are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary construction activities of the establishments in the industry, but also their secondary construction activities and, for that matter, their miscellaneous nonconstruction activities.

¹ Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual*, 1972.

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

^a Sampling error is greater than 40%.

¹ Home State—in which reporting establishment is physically located.

² Other State—in which construction work is performed although reporting establishment is not physically located there.

Masonry, Stone Setting, and Other Stonework Special Trade Contractors

SIC 1741

The Masonry, Stone Setting, and Other Stonework Special Trade Contractors industry includes establishments primarily engaged in masonry work, stone setting, and other stonework. It also includes boiler setting contractors, bricklaying contractors, cement block laying contractors, chimney construction contractors, exterior marble work contractors, and tuck pointing contractors. The industry does not include establishments primarily engaged in concrete work (industry 1771), foundation work (industry 1794), or those primarily engaged in the construction of streets, sidewalks, and alleys (industry 1611). A complete description of this industry may be found in the Standard Industrial Classification (SIC) Manual.¹

The code number for this industry in the 1972 revision of the SIC Manual is unchanged, but the content of the industry has been slightly changed from the previous classification system. Combinations of masonry and carpentry or masonry and residential remodeling, etc., were previously classified in SIC 1511 or 1799 depending upon the percent of work subcontracted in from others, but now are included in this industry if masonry is the primary kind of business. Based on data available in the 1967 census record, selected 1967 information was retabulated to approximate the new industry totals.

During 1972 there were 23,896 establishments with payroll classified in this industry. Total receipts of these establishments amounted to \$3,105 million. Of this, \$3,086 million were receipts for construction work, an increase of 58 percent compared with 1967. Their payments for construction work subcontracted to others amounted to \$108 million, leaving net construction receipts of about \$2,978 million. Total average employment in the industry showed an increase of 14 percent from 1967 to a total of 165.6 thousand employees. Total payroll for 1972 amounted to \$1,311 million. Value added at \$2,057 million in 1972 was 57 percent more than value added in 1967.

The establishments in this industry made payments of \$940 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others, purchased and subsequently provided to subcontractors for their use, purchased and then resold to others, and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are, of course, not included.

Establishments with 10 or more employees, while representing only 16 percent of the total number of employer establishments in this industry, accounted for 66 percent of total receipts.

Industry employment during the payroll period including March 12, 1972, amounted to 145.3 thousand employees, while employment for the pay period including August 12, 1972, was 177.5 thousand employees.

The 1972 estimates for establishments with payroll in all of the construction industries are based on a probability sample consisting of about 167,000 construction establishments. The estimates for this particular industry are based on a sample of about 7,800 establishments.

The general and detailed statistics are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary construction activities of the establishments in the industry, but also their secondary construction activities and, for that matter, their miscellaneous nonconstruction activities.

TABLE 1b. Data for 1972 Showing Composition of New Standard Industrial Classification Industries Based on Old Standard Industrial Classification

(Dollar figures in thousands. Detailed figures may not add to totals because of independent rounding or dropping of fractions)

Industry codes and titles	Total number of establishments	All employees (average)	Total payroll	Total receipts	Total construction receipts	Value added
	A	B	C	D	E	F
ESTABLISHMENTS CLASSIFIED ACCORDING TO THE 1972 SIC MANUAL:						
1741 MASONRY, STONE SETTING, AND OTHER STONEWORK SPECIAL TRADE CONTRACTORS.....	23 896	165 580	1 310 777	3 104 947	3 085 759	2 056 925
SAME ESTABLISHMENTS CLASSIFIED ACCORDING TO THE 1967 SIC MANUAL:						
1511 GENERAL BUILDING CONTRACTORS.....	81	597	5 023	(D)	21 649	7 775
1741 MASONRY, STONE SETTING AND OTHER STONEWORK SPECIAL TRADE CONTRACTORS.....	23 749	164 221	1 297 625	3 068 837	3 050 756	2 039 671
1799 SPECIAL TRADE CONTRACTORS, N.E.C.....	66	762	8 129	(D)	13 354	9 479

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

¹Content of industry was slightly modified by 1972 SIC revision, and 1967 data for this table were not retabulated to reflect change. 1967 data in table 1a are a retabulation. The effect of the additional firms covered under this industry was to increase construction receipts by \$16.4 million, or less than 1%.

²Reflects receipts for such construction by establishments classified in this industry only, not total receipts for such construction by all industries. See appendix A for detailed definitions.

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

^aSampling error is greater than 40%.

¹Content of industry was slightly modified by 1972 SIC revision, and 1967 data for this table were not retabulated to reflect change. 1967 data in table 1a are a retabulation. The effect of the additional firms covered under this industry was to increase construction receipts by \$16.4 million, or less than 1%.

Plastering, Drywall, Acoustical and Insulation Work Special Trade Contractors

SIC 1742

The Plastering, Drywall, Acoustical and Insulation Work Special Trade Contractors industry includes establishments primarily engaged in applying plaster, plain or ornamental, including installing lathing or other appurtenances to receive plaster, or in drywall, acoustical and building insulation work. A complete description of this industry may be found in the Standard Industrial Classification (SIC) Manual.¹

The code number for this industry is unchanged from that used in 1967, but the content of the industry has been revised to include drywall, acoustical, and insulation work special trade contractors, which were transferred from industry 1799. Based on the data available in the 1967 census record, selected 1967 information was retabulated to approximate the new industry totals.

During 1972, there were 13,415 establishments with payroll classified in this industry. Total receipts of these establishments amounted to \$4,195 million. Of this, \$4,085 million were receipts for construction work, an increase of 101 percent compared with 1967. Their payments for construction work subcontracted to others amounted to \$245 million, leaving net construction receipts of about \$3,839 million. Total average employment in the industry showed an increase of 46 percent from 1967 to a total of 170.4 thousand employees. Total payroll for 1972 amounted to \$1,685 million. Value added at \$2,585 million in 1972 was 106 percent more than value added in 1967.

The establishments in this industry made payments of \$1,365 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others, purchased and subsequently provided to subcontractors for their use, purchased and then resold to others, and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are, of course, not included.

Establishments with 10 or more employees, while representing only 30 percent of the total number of employer establishments in this industry, accounted for 82 percent of total receipts.

Industry employment during the payroll period including March 12, 1972, amounted to 158.8 thousand employees, while employment for the pay period including August 12, 1972, was 177.5 thousand employees.

The 1972 estimates for establishments with payroll in all of the construction industries are based on a probability sample consisting of about 167,000 construction establishments. The estimates for this particular industry are based on a sample of about 5,700 establishments.

The general and detailed statistics are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary construction activities of the establishments in the industry, but also their secondary construction activities and, for that matter, their miscellaneous nonconstruction activities.

						NUMBER OF ESTABLISHMENTS.....	NUMBER	8 796		3	
						CONSTRUCTION RECEIPTS.....	\$1 000	1 636 611		2	

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

¹Content of industry was slightly modified by 1972 SIC revision, and 1967 data for this table were not retabulated to reflect change. See tables 1a and 2 for selected 1967 data retabulated.

TABLE 7. Number of Employees by Type, for Selected Periods, and Payroll,

(Detailed figures may not add to totals because

Terrazzo, Tile, Marble, and Mosaic Work Special Trade Contractors

SIC 1743

The Terrazzo, Tile, Marble, and Mosaic Work Special Trade Contractors industry includes establishments primarily engaged in setting and installing ceramic tile, marble, and mosaic; and in mixing marble particles and cement to make terrazzo at the site of construction. This industry also includes contractors engaged in fresco work and mantel work. This industry does not include establishments primarily engaged in the manufacture of precast terrazzo steps, benches, and other terrazzo articles (industry 3272). Contractors primarily engaged in exterior marble work are classified in industry 1741. Contractors primarily engaged in the installation of asphalt tile and vinyl tile are classified in industry 1752. The installation of plastic wall tile is classified in industry 1799. A complete description of this industry may be found in the Standard Industrial Classification (SIC) Manual.¹

The identifying code number for this industry has not been changed from the code number used in the previous (1967) classification system; the content is also virtually unchanged. Therefore, the 1967 data shown for this industry have not been revised.

During 1972 there were 4,270 establishments with payroll classified in this industry. Total receipts of these establishments amounted to \$717 million. Of this, \$703 million were receipts for construction work, an increase of 27 percent compared with 1967. Their payments for construction work subcontracted to others amounted to \$18 million, leaving net construction receipts of about \$685 million. Total average employment in the industry showed a decrease of 4 percent from 1967 to a total of 30.9 thousand employees. Total payroll for 1972 amounted to \$260 million. Value added at \$419 million in 1972 was 29 percent more than value added in 1967.

The establishments in this industry made payments of \$279 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others, purchased and subsequently provided to subcontractors for their use, purchased and then resold to others, and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are, of course, not included.

Establishments with 10 or more employees, while representing only 19 percent of the total number of employer establishments in this industry, accounted for 65 percent of total receipts.

Industry employment during the payroll period including March 12, 1972, amounted to 29.2 thousand employees, while employment for the pay period including August 12, 1972, was 31.9 thousand employees.

The 1972 estimates for establishments with payroll in all of the construction industries are based on a probability sample consisting of about 167,000 construction establishments. The estimates for this particular industry are based on a sample of about 1,600 establishments.

The general and detailed statistics are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary construction activities of the establishments in the industry, but also their secondary construction activities and, for that matter, their miscellaneous nonconstruction activities.

Carpentering Special Trade Contractors

SIC 1751

The Carpentering Special Trade Contractors industry includes establishments primarily engaged in carpentry work and the installation of prefabricated windows and doors (except revolving doors). Ship joinery contractors are also included in this industry. Special Trade Contractors primarily engaged in drywall, acoustical, or building insulation work are classified in industry 1742. Carpentry done in repair shops is classified in industry 7699. A complete description of this industry may be found in the Standard Industrial Classification (SIC) Manual.¹

The code number for this industry in the 1972 revision of the SIC Manual is unchanged, but the content of the industry has been changed from the previous classification system. Carpentering special trade contractors primarily engaged in work related to highway and street construction, or heavy or engineering construction, were previously classified in industries 1611 and 1621 respectively, but now are included in this industry. Combinations of carpentry and masonry were previously classified in industries 1511 or 1799 depending upon the percent of work subcontracted in from others, but now are included in this industry if carpentry is the primary kind of business. Based on the data available in the 1967 census record, selected 1967 information was retabulated to approximate the new industry totals.

During 1972, there were 23,524 establishments with payroll classified in this industry. Total receipts of these establishments amounted to \$2,356 million. Of this, \$2,329 million were receipts for construction work, an increase of 93 percent compared with 1967. Their payments for construction work subcontracted to others amounted to \$201 million, leaving net construction receipts of about \$2,128 million. Total average employment in the industry showed an increase of 50 percent from 1967 to a total of 123.9 thousand employees. Total payroll for 1972 amounted to \$925 million. Value added at \$1,505 million in 1972 was 89 percent more than value added in 1967.

The establishments in this industry made payments of \$650 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others, purchased and subsequently provided to subcontractors for their use, purchased and then resold to others, and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are, of course, not included.

Establishments with 10 or more employees, while representing only 11 percent of the total number of employer establishments in this industry, accounted for 56 percent of total receipts.

Industry employment during the payroll period including March 12, 1972, amounted to 108.2 thousand employees, while employment for the pay period including August 12, 1972, was 132.1 thousand employees.

The 1972 estimates for establishments with payroll in all of the construction industries are based on a probability sample consisting of about 167,000 construction establishments. The estimates for this particular industry are based on a sample of about 7,700 establishments.

The general and detailed statistics are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary construction activities of the establishments in the industry, but also their secondary construction activities and, for that matter, their miscellaneous nonconstruction activities.

¹ Executive Office of the President, Office of Management and Budget, **Standard Industrial Classification Manual**, 1972.

Construction Receipts by State: 1972 (Location of Establishment)

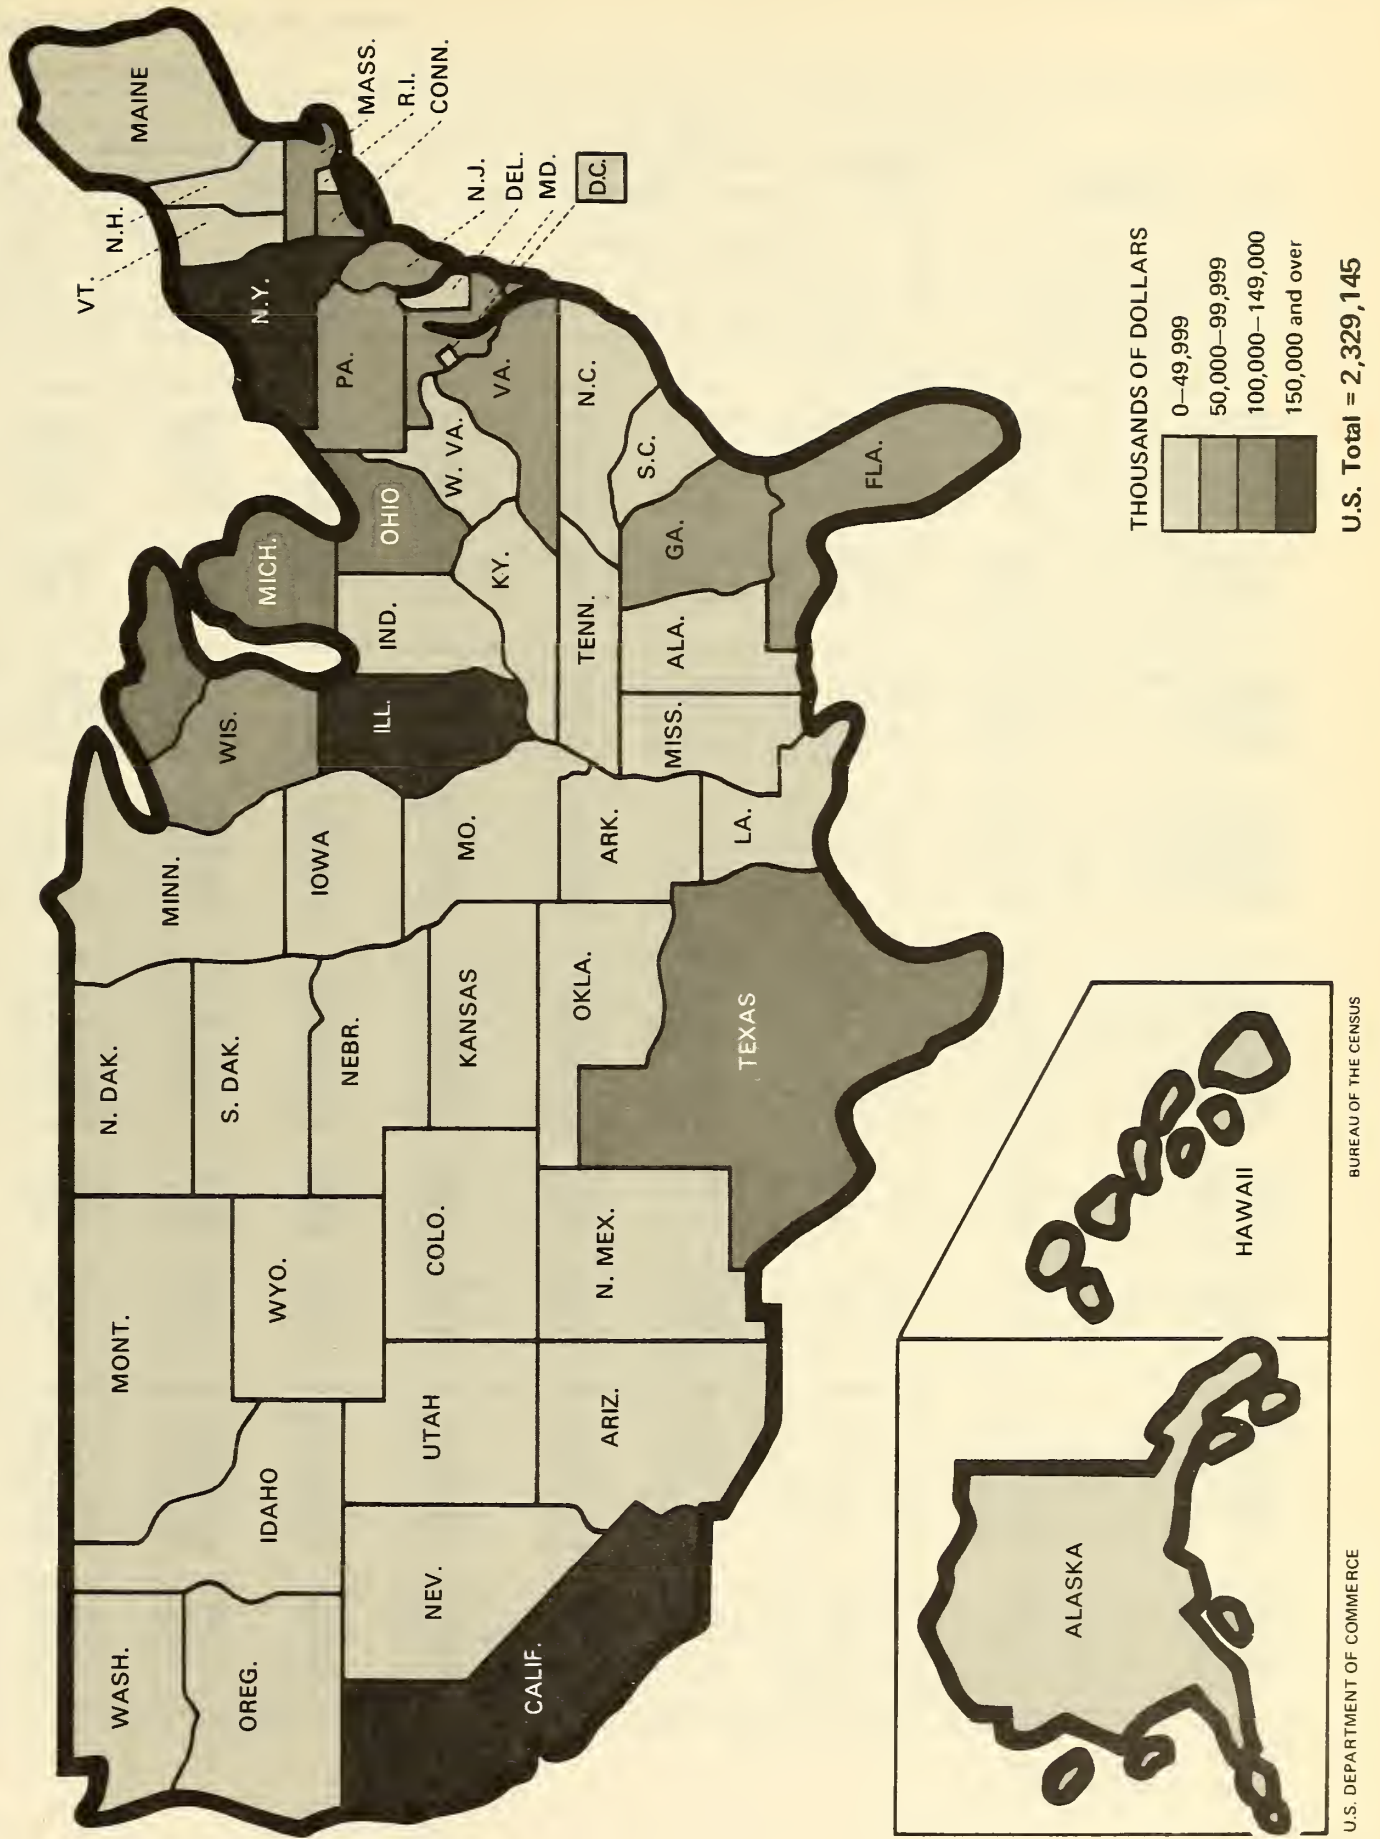

TABLE 1a. General Statistics by Geographic Areas

(Dollar figures in thousands. Detailed figures may not add to totals)

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

^aSampling error is greater than 40%.

¹Over 30% of the data was estimated.

Floor Laying and Other Floorwork Special Trade Contractors, N.E.C.

SIC 1752

The Floor Laying and Other Floorwork Special Trade Contractors, N.E.C. industry includes establishments primarily engaged in laying, scraping, finishing, or refinishing of parquet and other hardwood flooring. The industry also includes the installation of asphalt tile, linoleum, and mastic and resilient flooring. It includes establishments engaged in the installation of vinyl tile and sheets, the laying or removal of carpets, and the construction of fireproof flooring. A considerable amount of similar activity probably is undertaken as a secondary activity by establishments classified in other construction industries or other kinds of businesses. The industry does not include establishments primarily engaged in terrazzo, tile, marble, or mosaic work (industry 1743). Bowling alley installation work is classified in industry 1799. A complete description of this industry may be found in the Standard Industrial Classification (SIC) Manual.¹

The identifying code number for this industry has not been changed from the code number used in the previous classification system, and the content of the industry both under the previous and 1972 edition of the "Standard Industrial Classification Manual" is virtually unchanged. Therefore, the 1967 data shown for this industry have not been revised.

During 1972 there were 9,052 establishments with payroll classified in this industry. Total receipts of these establishments amounted to \$1,210 million. Of this, \$1,176 million were receipts for construction work, an increase of 54 percent compared with 1967. Their payments for construction work subcontracted to others amounted to \$44 million, leaving net construction receipts of about \$1,132 million. Total average employment in the industry showed an increase of 15 percent from 1967 to a total of 44.3 thousand employees. Total payroll for 1972 amounted to \$367 million. Value added at \$649 million in 1972 was 50 percent more than value added in 1967.

The establishments in this industry made payments of \$517 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others, purchased and subsequently provided to subcontractors for their use, purchased and then resold to others, and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are, of course, not included.

Establishments with 10 or more employees, while representing only 13 percent of the total number of employer establishments in this industry, accounted for 59 percent of total receipts.

Industry employment during the payroll period including March 12, 1972, amounted to 41.3 thousand employees, while employment for the pay period including August 12, 1972, was 45.8 thousand employees.

The 1972 estimates for establishments with payroll in all of the construction industries are based on a probability sample consisting of about 167,000 construction establishments. The estimates for this particular industry are based on a sample of about 3,100 establishments.

The general and detailed statistics are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary construction activities of the establishments in the industry, but also their secondary construction activities and, for that matter, their miscellaneous nonconstruction activities.

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

^aSampling error is greater than 40%.

¹Home State--in which reporting establishment is physically located.

²Other State--in which construction work is performed although reporting establishment is not physically located there.

³Over 30% of the data was estimated.

Roofing and Sheet Metal Work Special Trade Contractors

SIC 1761

The Roofing and Sheet Metal Work Special Trade Contractors industry includes establishments primarily engaged in the installation of siding and roofing (including roof spraying, painting, or coating). This industry also includes contractors engaged in sheet metal work except work in connection with plumbing, heating, or air conditioning. It includes establishments engaged in the installation of downspouts and gutters, metal skylights, and metal ceilings. Coppersmithing and tinsmithing in connection with construction work are classified in this industry. A complete description of this industry may be found in the Standard Industrial Classification (SIC) Manual.¹

The identifying code number for this industry has not been changed from the code number used in the previous classification system, and the content of the industry under both the previous and 1972 edition of the SIC Manual is virtually unchanged. Therefore, the 1967 data shown for this industry have not been revised.

During 1972, there were 18,535 establishments with payroll classified in this industry. Total receipts of these establishments amounted to \$4,000 million. Of this, \$3,940 million were receipts for construction work, an increase of 65 percent compared with 1967. Their payments for construction work subcontracted to others amounted to \$188 million, leaving net construction receipts of about \$3,752 million. Total average employment in the industry showed an increase of 19 percent from 1967 to a total of 158.1 thousand employees. Total payroll for 1972 amounted to \$1,406 million. Value added at \$2,348 million in 1972 was 66 percent more than value added in 1967.

The establishments in this industry made payments of \$1,464 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others, purchased and subsequently provided to subcontractors for their use, purchased and then resold to others, and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are, of course, not included.

Establishments with 10 or more employees, while representing only 23 percent of the total number of employer establishments in this industry, accounted for 73 percent of total receipts.

Industry employment during the payroll period including March 12, 1972, amounted to 141.7 thousand employees, while employment for the pay period including August 12, 1972, was 167.8 thousand employees.

The 1972 estimates for establishments with payroll in all of the construction industries are based on a probability sample consisting of about 167,000 construction establishments. The estimates for this particular industry are based on a sample of about 6,900 establishments.

The general and detailed statistics are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary construction activities of the establishments in the industry, but also their secondary construction activities and, for that matter, their miscellaneous nonconstruction activities.

					CONSTRUCTION WORK NOT SPECIFIED BY KINO	297 510		4	

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

¹Reflects receipts for such construction by establishments classified in this industry only, not total receipts for such construction by all industries. See appendix A for detailed definitions.

Concrete Work Special Trade Contractors

SIC 1771

The Concrete Work Special Trade Contractors industry includes establishments primarily engaged in concrete work. The industry also includes establishments engaged in surfacing concrete floors, applying seal to concrete or asphalt surfaces, constructing with gunite and stucco, and constructing private driveways and walks of all materials. Concrete work done by general contractors engaged in highway and street construction is classified in industry 1611. Concrete work incidental to the construction of foundations and concrete work included in excavation contracts is classified in industry 1794. A complete description of the industry may be found in the Standard Industrial Classification (SIC) Manual.¹

The code number for this industry in the 1972 revision of the SIC Manual is unchanged, but the content of the industry has been changed from the previous classification system. Concrete work special trade contractors primarily engaged in work related to highway and street construction, or heavy or engineering construction, were previously classified in industries 1611 and 1621 respectively, but now are included in this industry. Based on the data available in the 1967 census record, selected 1967 information was retabulated to approximate the new industry totals.

During 1972, there were 17,772 establishments with payroll classified in this industry. Total receipts of these establishments amounted to \$3,699 million. Of this, \$3,650 million were receipts for construction work, an increase of 72 percent compared with 1967. Their payments for construction work subcontracted to others amounted to \$198 million, leaving net construction receipts of about \$3,452 million. Total average employment in the industry showed an increase of 29 percent from 1967 to a total of 147.9 thousand employees. Total payroll for 1972 amounted to \$1,197 million. Value added at \$2,141 million in 1972 was 72 percent more than value added in 1967.

The establishments in this industry made payments of \$1,360 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others, purchased and subsequently provided to subcontractors for their use, purchased and then resold to others, and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are, of course, not included.

Establishments with 10 or more employees, while representing only 20 percent of the total number of employer establishments in this industry, accounted for 70 percent of total receipts.

Industry employment during the payroll period including March 12, 1972, amounted to 113.8 thousand employees, while employment for the pay period including August 12, 1972, was 165.5 thousand employees.

The 1972 estimates for establishments with payroll in all of the construction industries are based on a probability sample consisting of about 167,000 construction establishments. The estimates for this particular industry are based on a sample of about 6,100 establishments.

The general and detailed statistics are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary construction activities of the establishments in the industry, but also their secondary construction activities and, for that matter, their miscellaneous nonconstruction activities.

¹ Executive Office of the President, Office of Management and Budget, **Standard Industrial Classification Manual, 1972.**

Construction Receipts by State: 1972 (Location of Establishment)

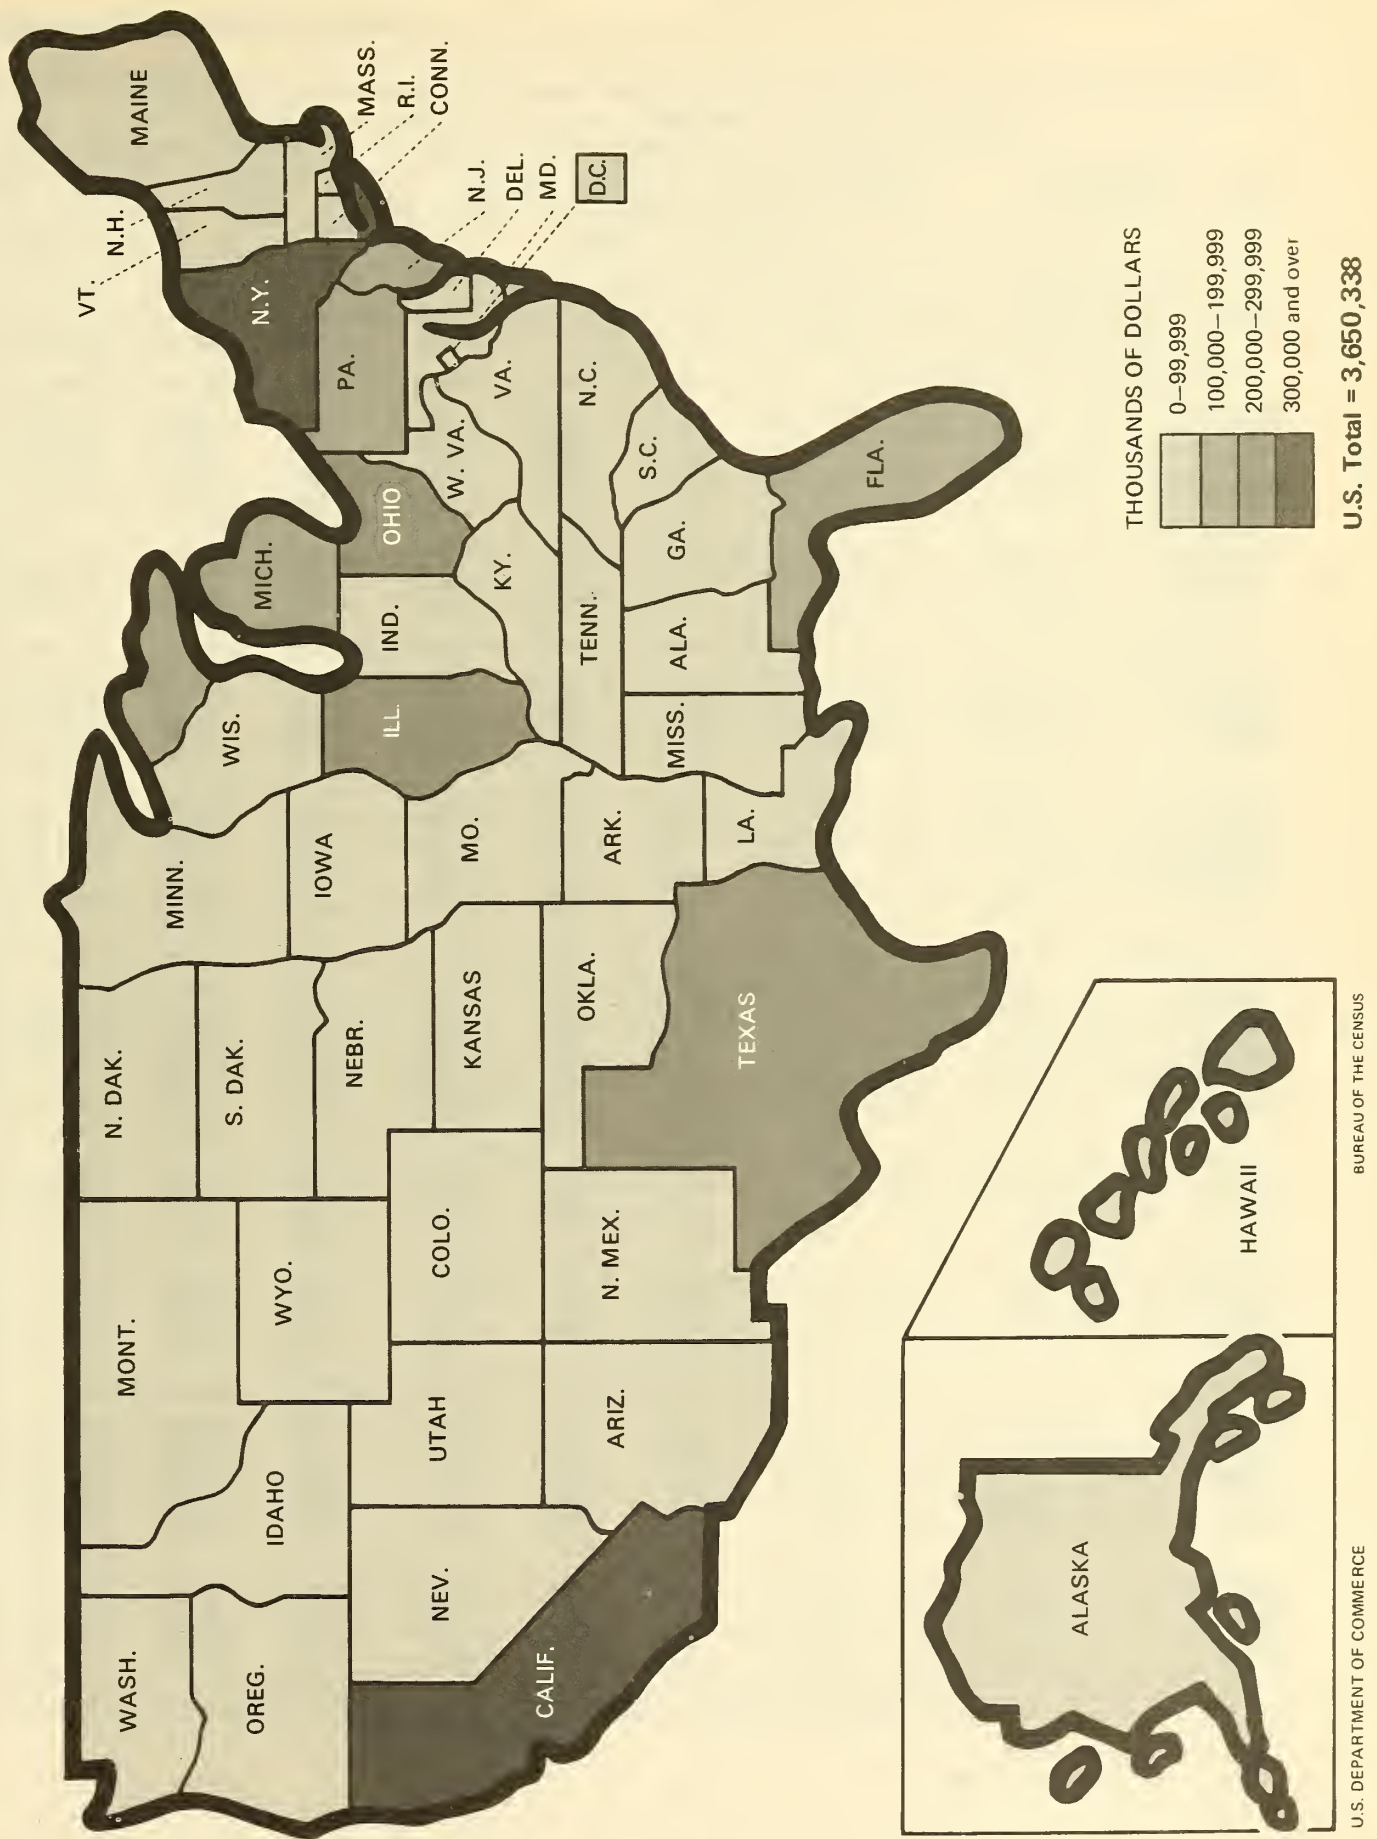

TABLE 1a. General Statistics by Geographic Areas

(Dollar figures in thousands. Detailed figures may not add to totals)

Establishment location	1972							
	Total number of establishments	Number of employees		Payroll		Receipts during year		Net construction receipts (G-J)
		All employees	Construction workers	Total payroll	Construction workers	Total receipts	Total construction receipts

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

^aSampling error is greater than 40%.

¹For 1972, over 30% of the data was estimated.

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

^aSampling error is greater than 40%.

¹Over 30% of the data was estimated.

Water Well Drilling Special Trade Contractors

SIC 1781

The Water Well Drilling Special Trade Contractors industry includes establishments primarily engaged in water well drilling. It also includes establishments servicing water wells. A complete description of the industry may be found in the Standard Industrial Classification (SIC) Manual.¹

The code number as well as the definition of this industry were unchanged in the 1972 revision of the SIC Manual from the previous classification system.

During 1972 there were 4,159 establishments with payroll classified in this industry. Total receipts of these establishment amounted to \$557 million. Of this, \$534 million were receipts for construction work, an increase of 68 percent compared with 1967. Their payments for construction work subcontracted to others amounted to \$11 million, leaving net construction receipts of about \$523 million. Total average employment in the industry showed an increase of 21 percent from 1967 to a total of 17.1 thousand employees. Total payroll for 1972 amounted to \$125 million. Value added at \$326 million in 1972 was 71 percent more than value added in 1967.

The establishments in this industry made payments of \$220 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others, purchased and subsequently provided to subcontractors for their use, purchased and then resold to others, and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are, of course, not included.

Establishments with 10 or more employees, while representing only 9 percent of the total number of employer establishments in this industry, accounted for 42 percent of total receipts.

Industry employment during the payroll period including March 12, 1972, amounted to 15.5 thousand employees while employment for the pay period including August 12, 1972, was 17.8 thousand employees.

The 1972 estimates for establishments with payroll in all of the construction industries are based on a probability sample consisting of about 167,000 construction establishments. The estimates for this particular industry are based on a sample of about 1,300 establishments.

The general and detailed statistics are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary construction activities of the establishments in the industry, but also reflect their secondary construction activities and, for that matter, their miscellaneous nonconstruction activities.

Note: Each State not shown separately was withheld (a) to avoid disclosing figures for individual companies or (b) because estimates did not meet publication standards on the basis of either the associated standard error or a consistency review. All such figures are included in appropriate geographic division and U.S. totals.

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%. ^a Sampling error is greater than 40%.

¹For 1972 over 30% of the data was estimated.

Structural Steel Erection Special Trade Contractors

SIC 1791

The Structural Steel Erection Special Trade Contractors industry includes establishments primarily engaged in the erection of structural steel. In addition, it includes establishments primarily engaged in the placing of concrete reinforcement and structural iron work and the erection of metal storage tanks. It also includes establishments engaged in the installation of metal building fronts and store fronts, the installation of metal elevator fronts, and metal furring work. Structural steel erection work done by general contractors engaged in bridge construction or other heavy construction is classified in the appropriate industries of major group 16. A complete description of the industry may be found in the Standard Industrial Classification (SIC) Manual.¹

The identifying code number for this industry has not been changed from the one used in the previous classification system. However, special trade contractors primarily engaged in nonbuilding construction were previously classified in the appropriate industries of major group 16, but are now included in this industry. A measure of the importance of this SIC change is shown in table 1b. Since the 1967 data in this report were not retabulated to reflect the SIC change, the 1972 and 1967 data are not completely comparable.

During 1972, the establishments with payroll in this industry had total receipts of \$1,496 million. Of this, \$1,458 million were receipts for construction work, an increase of 99 percent compared with 1967. Their payments for construction work subcontracted to others amounted to \$72 million, leaving net construction receipts of about \$1,386 million. Total average employment in the industry showed an increase of 40 percent from 1967 to a total of 58.1 thousand employees. Total payroll for 1972 amounted to \$638 million. Value added at \$1,013 million in 1972 was 84 percent more than value added in 1967.

The establishments in this industry made payments of \$411 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others, purchased and subsequently provided to subcontractors for their use, purchased and then resold to others, and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are, of course, not included.

Establishments with 10 or more employees, while representing only 48 percent of the total number of employer establishments in this industry accounted for 91 percent of total receipts.

Industry employment during the payroll period including March 12, 1972, amounted to 53.6 thousand employees while employment for the pay period including August 12, 1972, was 61.1 thousand employees.

The 1972 estimates for establishments with payroll in all of the construction industries are based on a probability sample consisting of about 167,000 construction establishments. The estimates for this particular industry are based on a sample of about 1,800 establishments.

The general and detailed statistics are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary construction activities of the establishments in the industry, but also reflect their secondary construction activities and, for that matter, their miscellaneous nonconstruction activities.

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%. ^a Sampling error is greater than 40%.

¹Data for 1967 are not completely comparable to data for 1972 (see text on p. 1). ²For 1972, over 30% of the data was estimated.

TABLE 1b. Data for 1972 Showing Composition of New Standard Industrial Classification Industries Based on Old Standard Industrial Classification

(Dollar figures in thousands. Detailed figures may not add to totals because of independent rounding or dropping of fractions)

Industry codes and titles	Total number of establishments	All employees (average)	Total payroll	Total receipts	Total construction receipts	Value added
	A	B	C	D	E	F
ESTABLISHMENTS CLASSIFIED ACCORDING TO THE 1972 SIC MANUAL:						
1791 STRUCTURAL STEEL ERECTION.....	2,760	58,137	637,949	1,496,417	1,457,836	1,012,890
SAME ESTABLISHMENTS CLASSIFIED ACCORDING TO THE 1967 SIC MANUAL:						
1621 HEAVY CONSTRUCTION, N.E.C.....	118	3,692	46,843	132,868	130,834	72,909
1791 STRUCTURAL STEEL ERECTION.....	2,642	54,445	591,106	1,363,549	1,327,002	939,981

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

Note: Each State not shown separately was withheld (a) to avoid disclosing figures for individual companies or (b) because estimates did not meet publication standards on the basis of either the associated standard error or a consistency review. All such figures are included in appropriate geographic division and U.S. totals.

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%. ^a Sampling error is greater than 40%.

¹Over 30% of the data was estimated.

Glass and Glazing Work Special Trade Contractors

SIC 1793

The Glass and Glazing Work Special Trade Contractors industry includes establishments primarily engaged in glass and glazing work in connection with, but not limited to, building construction. A complete description of the industry may be found in the Standard Industrial Classification (SIC) Manual.¹

The identifying code number for this industry has not been changed from the code number used in the previous classification system, and the content of the industry both under the previous and 1972 editions of the SIC Manual is virtually unchanged. Therefore, the 1967 data shown for this industry have not been revised.

During 1972 there were 2,459 establishments with payroll classified in this industry. Total receipts of these establishments amounted to \$657 million. Of this, \$594 million were receipts for construction work, an increase of 117 percent compared with 1967. Their payments for construction work subcontracted to others amounted to \$9 million, leaving net construction receipts of about \$585 million. Total average employment in the industry showed an increase of 63 percent from 1967 to a total of 20.0 thousand employees. Total payroll for 1972 amounted to \$190 million. Value added at \$341 million in 1972 was 111 percent more than value added in 1967.

The establishments in this industry made payments of \$308 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others, purchased and subsequently provided to subcontractors for their use, purchased and then resold to others, and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are, of course, not included.

Establishments with 10 or more employees, while representing only 26 percent of the total number of employer establishments in this industry, accounted for 66 percent of total receipts.

Industry employment during the payroll period including March 12, 1972, amounted to 18.7 thousand employees, while employment for the pay period including August 12, 1972, was 20.3 thousand employees.

The 1972 estimates for establishments with payroll in all of the construction industries are based on a probability sample consisting of about 167,000 construction establishments. The estimates for this particular industry are based on a sample of about 1,500 establishments.

The general and detailed statistics are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary construction activities of the establishments in the industry, but also their secondary construction activities and, for that matter, their miscellaneous nonconstruction activities.

¹ Executive Office of the President, Office of Management and Budget, **Standard Industrial Classification Manual**, 1972.

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%. ^a Sampling error is greater than 40%.

¹For 1972, over 30% of the data was estimated.

TABLE 8. Participation in Construction Work in Home State and in Other States, by Location of Reporting Establishments With Payroll: 1972

(Dollar figures in thousands. Detailed figures may not add to totals because of independent rounding or dropping of fractions)

Establishment location	All establishments				Establishments only doing construction work in home State ¹		Establishments doing construction work both in home State and in other States, or only in other States ²			Standard error of estimates

Excavating and Foundation Work Special Trade Contractors

SIC 1794

The Excavating and Foundation Work Special Trade Contractors industry includes establishments primarily engaged in excavation and foundation work, including digging and loading, in connection with building construction, or heavy or engineering construction. Contractors in this industry may also perform incidental concrete work, but contractors primarily engaged in concrete work are classified in industry 1771. Excavation and earth moving work done by general contractors engaged in highway and street construction or heavy or engineering construction is classified in the appropriate industries of major group 16. Grave excavation contractors are classified in industry 1799. Pile-driving general contractors are classified in industry 1629. A complete description of this industry may be found in the Standard Industrial Classification (SIC) Manual.¹

The code number for this industry in the 1972 revision of the SIC Manual is unchanged, but the content of the industry has been changed from the previous classification system. Excavating and foundation work special trade contractors primarily engaged in work related to highway and street construction or heavy or engineering construction were previously classified in industries 1611 and 1621 respectively, but now are included in this industry. Based on the data available in the 1967 census record, selected 1967 information was retabulated to approximate the new industry totals.

During 1972, there were 15,981 establishments with payroll classified in this industry. Total receipts of these establishments amounted to \$3,054 million. Of this, \$2,957 million were receipts for construction work, an increase of 79 percent compared with 1967. Their payments for construction work subcontracted to others amounted to \$234 million, leaving net construction receipts of about \$2,723 million. Total average employment in the industry showed an increase of 34 percent from 1967 to a total of 104.6 thousand employees. Total payroll for 1972 amounted to \$923 million. Value added at \$2,188 million in 1972 was 80 percent more than value added in 1967.

The establishments in this industry made payments of \$633 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others, purchased and subsequently provided to subcontractors for their use, purchased and then resold to others, and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are, of course, not included.

Establishments with 10 or more employees, while representing only 16 percent of the total number of employer establishments in this industry, accounted for 65 percent of total receipts.

Industry employment during the payroll period including March 12, 1972, amounted to 87.4 thousand employees, while employment for the pay period including August 12, 1972, was 114.6 thousand employees.

The 1972 estimates for establishments with payroll in all of the construction industries are based on a probability sample consisting of about 167,000 construction establishments. The estimates for this particular industry are based on a sample of about 4,800 establishments.

The general and detailed statistics are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary construction activities of the establishments in the industry, but also their secondary construction activities and, for that matter, their miscellaneous nonconstruction activities.

TABLE 1b. Data for 1972 Showing Composition of New Standard Industrial Classification
Industries Based on Old Standard Industrial Classification

(Dollar figures in thousands. Detailed figures may not add to totals because of independent rounding or dropping of fractions)

Industry codes and titles	Total number of establishments	All employees (average)	Total payroll	Total receipts	Total construction receipts	Value added
	A	B	C	D	E	F
ESTABLISHMENTS CLASSIFIED ACCORDING TO THE 1972 SIC MANUAL:						
1794 EXCAVATING AND FOUNDATION WORK SPECIAL TRADE CONTRACTORS.....	15 981	104 598	923 468	3 054 467	2 956 531	2 188 249
SAME ESTABLISHMENTS CLASSIFIED ACCORDING TO THE 1967 SIC MANUAL:						
1611 HIGHWAY AND STREET CONSTRUCTION CONTRACTORS.....	1 446	12 737	117 053	416 917	401 462	284 511
1621 HEAVY CONSTRUCTION, N.E.C.....	5 873	30 421	246 927	858 556	840 905	623 821
1794 EXCAVATING AND FOUNDATION WORK SPECIAL TRADE CONTRACTORS.....	8 662	61 440	559 488	1 778 994	1 714 164	1 279 917

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

TABLE 2. Detailed Statistics for Establishments With Payroll: 1972 and 1967

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

^a Sampling error is greater than 40%.

¹ Home State--in which reporting establishment is physically located.

² Other State--in which construction work is performed although reporting establishment is not physically located there.

³ Over 30% of the data was estimated.

Wrecking and Demolition Work Special Trade Contractors

SIC 1795

The Wrecking and Demolition Work Special Trade Contractors industry includes establishments primarily engaged in the wrecking and demolition of buildings and other structures, who may or may not sell material derived from demolishing operations. Contractors primarily engaged in dismantling steel oil tanks (except oil field work) are also classified in industry 1795. This industry does not include establishments primarily engaged in marine wrecking (wrecking ships for scrap, removal of underwater hazards by divers, or salvaging from sunken craft) (industry 4469). Underwater rock removal, dredging, and marine construction are classified in industry 1629. A complete description of this industry may be found in the Standard Industrial Classification (SIC) Manual.¹

The identifying code number for this industry has not been changed from that used in the previous classification system, and the content of the industry under both the previous and 1972 edition of the SIC Manual is virtually unchanged. Therefore, the 1967 data shown for this industry have not been revised.

During 1972, there were 1,027 establishments with payroll classified in this industry. Total receipts of these establishments amounted to \$236.7 million. Of this, \$219.4 million were receipts for construction work, an increase of 36 percent compared with 1967. Their payments for construction work subcontracted to others amounted to \$16.8 million, leaving net construction receipts of about \$202.6 million. Total average employment in the industry showed a decrease of 11 percent from 1967 to a total of 9.1 thousand employees. Total payroll for 1972 amounted to \$80.2 million. Value added at \$195.4 million in 1972 was 35 percent more than value added in 1967.

The establishments in this industry made payments of \$24.5 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others, purchased and subsequently provided to subcontractors for their use, purchased and then resold to others, and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are, of course, not included.

Establishments with 10 or more employees, while representing only 27 percent of the total number of employer establishments in this industry, accounted for 72 percent of total receipts.

Industry employment during the payroll period including March 12, 1972, amounted to 8.7 thousand employees, while employment for the pay period including August 12, 1972, was 9.5 thousand employees.

The 1972 estimates for establishments with payroll in all of the construction industries are based on a probability sample consisting of about 167,000 construction establishments. The estimates for this particular industry are based on a sample of about 600 establishments.

The general and detailed statistics are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary construction activities of the establishments in the industry, but also their secondary construction activities and, for that matter, their miscellaneous nonconstruction activities.

Installation or Erection of Building Equipment Special Trade Contractors, N.E.C.

SIC 1796

The Installation or Erection of Building Equipment Special Trade Contractors, N.E.C., industry includes establishments primarily engaged in the installation of building equipment, not elsewhere classified, such as elevators, escalators, pneumatic tube systems and dust collection equipment. This industry also includes contractors primarily engaged in the installation of or the dismantling of machinery or other industrial equipment. It also includes establishments engaged in the installation of built-in vacuum cleaning systems, revolving doors, and dumbwaiters. A complete description of this industry may be found in the Standard Industrial Classification (SIC) Manual.¹

The code number for this industry is unchanged from that used in 1967, but the content has been revised to include millwrights and other machinery and industrial equipment installation special trade contractors which were transferred from industry 1799. Based on the data available in the 1967 census record, selected 1967 information was retabulated to approximate the new industry totals.

During 1972, there were 1,945 establishments with payroll classified in this industry. Total receipts of these establishments amounted to \$1,458 million. Of this, \$1,408 million were receipts for construction work, an increase of 118 percent compared with 1967. Their payments for construction work subcontracted to others amounted to \$59 million, leaving net construction receipts of about \$1,349 million. Total average employment in the industry showed an increase of 55 percent from 1967 to a total of 39.0 thousand employees. Total payroll for 1972 amounted to \$518 million. Value added at \$978 million in 1972 was 125 percent more than value added in 1967.

The establishments in this industry made payments of \$421 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others, purchased and subsequently provided to subcontractors for their use, purchased and then resold to others, and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are, of course, not included.

Establishments with 10 or more employees, while representing only 41 percent of the total number of employer establishments in this industry, accounted for 90 percent of total receipts.

Industry employment during the payroll period including March 12, 1972, amounted to 40.0 thousand employees, while employment for the pay period including August 12, 1972, was 41.3 thousand employees.

The 1972 estimates for establishments with payroll in all of the construction industries are based on a probability sample consisting of about 167,000 construction establishments. The estimates for this particular industry are based on a sample of about 1,400 establishments.

The general and detailed statistics are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary construction activities of the establishments in the industry, but also their secondary construction activities and, for that matter, their miscellaneous nonconstruction activities.

¹Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual*, 1972.

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

^aSampling error is greater than 40%.

¹Over 30% of the data was estimated.

Special Trade Contractors, Not Elsewhere Classified

SIC 1799

The Special Trade Contractors, Not Elsewhere Classified, industry includes establishments primarily engaged in construction work not in some other construction industry. It includes construction work such as core or diamond drilling, scaffolding construction, house moving, fireproofing and waterproofing of buildings and other structures, sandblasting and steam cleaning of building exteriors, and establishments engaged in numerous other activities. A complete description of the industry may be found in the Standard Industrial Classification (SIC) Manual.¹

The code number for this industry in the 1972 revision of the SIC Manual is unchanged, but the content of the industry has been significantly changed from the previous classification system. Drywall, acoustical and insulation special trade contractors, previously classified in this industry, are now included in industry 1742. Likewise, millwrights and other special trade contractors engaged in the installation of or the dismantling of machinery and other industrial equipment, previously classified in this industry, now are included in industry 1796. Fence construction contractors and swimming pool contractors were previously classified in industry 1611, but now are included in this industry. Ornamental metal work special trade contractors, previously classified in industry 1792, are now included in this industry. Based on the data available in the 1967 census record, selected 1967 information was retabulated to approximate the new industry totals.

During 1972, there were 15,420 establishments with payroll classified in this industry. Total receipts of these establishments amounted to \$2,540 million. Of this, \$2,440 million were receipts for construction work, an increase of 98 percent compared with 1967. Their payments for construction work subcontracted to others amounted to \$176 million, leaving net construction receipts of about \$2,265 million. Total average employment in the industry showed an increase of 55 percent from 1967 to a total of 101.3 thousand employees. Total payroll for 1972 amounted to \$826 million. Value added at \$1,549 million in 1972 was 97 percent more than value added in 1967.

The establishments in this industry made payments of \$815 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others, purchased and subsequently provided to subcontractors for their use, purchased and then resold to others, and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are, of course, not included.

Establishments with 10 or more employees, while representing only 17 percent of the total number of employer establishments in this industry, accounted for 64 percent of total receipts.

Industry employment during the payroll period including March 12, 1972, amounted to 88.1 thousand employees, while employment for the pay period including August 12, 1972, was 110.6 thousand employees.

The 1972 estimates for establishments with payroll in all of the construction industries are based on a probability sample consisting of about 167,000 construction establishments. The estimates for this particular industry are based on a sample of about 7,500 establishments.

The general and detailed statistics are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary construction activities of the establishments in the industry, but also their secondary construction activities and, for that matter, their miscellaneous nonconstruction activities.

HAWAII	50	522	415	5 223	3 823	14 328	12 133	10 955

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

¹Sampling error is greater than 40%.

²For 1972, over 30% of the data was estimated.

for Establishments With Payroll: 1972 and 1967

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

^aSampling error is greater than 40%.

¹Home State--in which reporting establishment is physically located.

²Other State--in which construction work is performed although reporting establishment is not physically located there.

³Over 30% of the data was estimated.

Subdividers and Developers, Except Cemeteries

SIC 6552

The Subdividers and Developers, Except Cemeteries industry, includes establishments primarily engaged in subdividing real property into lots, except cemetery lots, and in developing it for resale on their own account or for others. A complete description of the industry may be found in the 1972 edition of the Standard Industrial Classification (SIC) Manual.¹

The identifying code number for this industry has not been changed from the code number used in the previous classification system, and the content of the industry both under the previous and 1972 edition of the SIC Manual is virtually unchanged. Therefore, the 1967 data shown for this industry have not been revised.

During 1972, there were 7,914 establishments with payroll classified in this industry. Total receipts of these establishments amounted to \$3,128 million. Of this, \$1,319 million were receipts for construction work, an increase of 178 percent compared with 1967. Their payments for construction work subcontracted to others amounted to \$802 million, leaving net construction receipts of about \$516 million. Total average employment in the industry showed an increase of 177 percent from 1967 to a total of 62.3 thousand employees. Total payroll for 1972 amounted to \$477 million. Value added at \$387 million in 1972 was 146 percent more than value added in 1967.

The establishments in this industry made payments of \$342 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others, purchased and subsequently provided to subcontractors for their use, purchased and then resold to others, and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are, of course, not included.

Establishments with 10 or more employees, while representing only 12 percent of the total number of employer establishments in this industry, accounted for 69 percent of total receipts.

Industry employment during the payroll period including March 12, 1972, amounted to 55.7 thousand employees, while employment for the pay period including August 12, 1972, was 68.1 thousand employees.

The 1972 estimates for establishments with payroll in all of the construction industries are based on a probability sample consisting of about 167,000 construction establishments. The estimates for this particular industry are based on a sample of about 4,000 establishments.

The general and detailed statistics are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary construction activities of the establishments in the industry, but also their secondary construction activities and, for that matter, their miscellaneous nonconstruction activities. The relatively low response rate encountered in this industry required adjustments for nonresponse, often exceeding 30%, for some of the statistical items shown.

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

^aSampling error is greater than 40%.

Legal Form of Organization

This special report provides establishment statistics from the 1972 Census of Construction Industries classified by legal form of company organization.

Table 1 of this report provides data for construction establishments with payroll (employers), for construction establishments with no payroll (nonemployers), and for the aggregate. Summary statistics of the establishments are presented by legal form of company organization.

During 1972, there was a total of 920,806 establishments located in the United States operating primarily as general contractors, special trade contractors, operative builders, or subdividers and developers. These establishments had total receipts of \$164.5 billion.

There were 664,821 individual proprietorship establishments (with and without payroll) accounting for 72 percent of all construction establishments. These establishments of individual proprietorships accounted for total receipts of \$25.7 billion or 16 percent of total receipts of all establishments. Corporate establishments accounted for 20 percent of all establishments and 77 percent of total receipts. Partnership establishments accounted for 5 percent of all establishments and 6 percent of total receipts. Establishments with other legal forms of organization and establishments which could not be classified accounted for the balance.

Table 2 of this report provides more detailed information for the employer group. The selected statistics are classified both by single and multiunit companies and by legal form of company organization.

Total receipts for all construction establishments with payroll in 1972 amounted to \$155.8 billion. Establishments of multiunit companies accounted for 3 percent of all the establishments with payroll but accounted for almost 27 percent of the total receipts of establishments with payroll. On the other hand, establishments of single-unit companies accounted for 97 percent of the number of employer establishments and 73 percent of the total receipts.

There were 170,175 establishments, 39 percent of all employer establishments, that were operated as corporations. They had total receipts of \$125.4 billion, 80 percent of the receipts of all employers. There were 267,766 establishments, 61 percent of the employer establishments, that were not operated as corporations, including establishments which we could not classify. They accounted for 20 percent of total receipts of all employer establishments. Of these unincorporated establishments, 195,668 establishments were organized as individual proprietorships, and 39,383 establishments were partnerships. Establishments with other legal forms of organization and establishments which could not be classified accounted for the balance.

Establishments of multiunit companies, on the average, were larger than those of single-unit companies. The average multiunit establishment had 74 total employees and receipts of \$3.6 million, and made new capital expenditures (excluding land) of \$77.9 thousand. The average single-unit establishment had only 8 total employees and receipts of \$265.3 thousand and made new capital expenditures (excluding land) of only \$6.9 thousand.

Establishments operated as corporations tended, on the average, to be larger than those operated as partnerships or individual proprietorships. The average corporate establishment had 18 employees and total receipts of \$736.7 thousand, and made new capital expenditures (excluding land) of \$17.3 thousand. The average partnership establishment had 6 employees and total receipts of \$222.1 thousand, and made new capital expenditures (excluding land) of \$6.4 thousand. The average establishment of individual proprietorships had fewer than 4 employees and total receipts of \$94.3 thousand, and made new capital expenditures of only \$3.1 thousand.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. Statistics for the nonemployers were based on data from administrative records of the Federal Government.

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data therefore reflect the primary construction activities of the establishments, their secondary construction activities, and their miscellaneous nonconstruction activities.

Technical Notes

Census Definition of Company

The 1972 Census of Construction Industries was conducted as an integral part of the 1972 economic censuses. A "company," as used in the economic censuses, is a business organization consisting of one or more establishments under common ownership or control. Each company covered in the 1972 economic censuses was asked to report on all the domestic operating establishments it owned or controlled (such as construction establishments, factories, mines, stores, sales offices, etc.) as well as its separate administrative or auxiliary activities (such as central offices, central warehouses, research and development laboratories, and other support functions within the firm). All foreign activities of these companies, however, were excluded from census coverage. Each company was also asked to specify its legal form of organization (corporation, partnership, sole proprietorship, cooperative, etc.).

The Census Bureau initially determined which establishments were owned or controlled by each known multiestablishment company through a prec canvass survey conducted almost one year in advance of the actual collection of census reports. Although this advance survey helped to determine the company-establishment and parent-subsidiary relationships of these multiunit companies in most instances, it was not expected to reflect fully all the changes in ownership status occurring prior to or during the census year 1972. As a further aid in identifying establishments under common ownership or control, company affiliation inquiries appeared on the report forms mailed in the 1972 economic censuses.

For economic census purposes, therefore, a "company" consisted of all establishments specified by the reporting firm to be under its ownership or control. Furthermore, if the owning or controlling firm was a "parent" company having one or more subsidiary firms, all establishments of its subsidiaries were also included in the Census definition of the company.

For purposes of this report, a "single-unit" company is defined as a firm which owns or controls **only one** establishment. A "multiunit" company is a firm which owns or controls **two or more** establishments, at least one of which comes within the scope of the economic censuses. A firm with two or more construction establishments would be classified as a "multiunit" company. However, it should be noted that a firm with only one construction establishment could be classified as a "multiunit" company if the firm also owns or controls one or more other establishments in other lines of activity.

The user of these data should keep in mind the construction establishment definition. Briefly stated, a "construction establishment" is defined as a **relatively permanent office**, or other place of business at which or from which the usual business activities related to construction are conducted. Separate construction reports, therefore, were **not** required for each project or site. (A more complete description may be found in the introduction to this report. A large construction firm with several "not relatively permanent" branch offices and only one permanent office would be required to file only one establishment report and would, therefore, be classified as a "single-unit" company. A smaller contractor might have two or more "relatively permanent" branch offices, file two or more establishment reports, and be classified as a "multiunit" company.

Technical Notes—Continued

Legal Form of Organization

Each employer company covered in the 1972 economic censuses was classified into one of five specified legal forms of organization, according to the company's response to a "Form of Ownership" check-box question appearing on each of its census establishment report forms. The five classifications consisted of—

- a. **Individual proprietorships**—Companies owned by one person.
- b. **Partnerships**—Companies owned by two or more persons, each of whom had a financial interest in the business.
- c. **Corporations**—Companies (other than cooperatives) that were legally incorporated under State laws.
- d. **Cooperatives**—Companies owned by an association of customers, whether or not they were incorporated.
- e. **Other Legal Forms**—Companies whose legal form of organization was not one of those defined above. Included in this miscellaneous group were estates and receiverships.

Establishments without payroll were classified into specified legal forms of organization according to the type of income tax form filed (1040C—individual proprietorship; 1065—partnership; 1120 and 1120S—corporation).

Note: Each SIC industry not shown separately in the above table was withheld because data for establishments without payroll were classified only at broad kind-of-business levels.

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than .1 percent.

¹Sampling error is greater than 40 percent.

²Includes establishments with other noncorporate forms of organization plus establishments for which the information available did not permit classification by legal form of organization.

³Contains undercoverage because administrative data were received too late for inclusion in this report.

⁴May also include data for construction establishments not classified to 2-digit industry detail.

⁵Data for the establishments without payroll in the 655 industry group may include data for an unknown number of cemetery subdividers and developers.

TABLE 2. Selected Statistics by Industry, Type of Operation, and Legal Form of Organization, for Establishments With Payroll: 1972

(Dollar figures in thousands. Detailed figures may not add to totals because of independent rounding or dropping of fractions)

Item	Total number of establishments	All employees (average)	Total payroll	Total receipts	Total construction receipts	Payments for construction work subcontracted to others	Payments for materials, components, and supplies	Net construction receipts	Value added	Capital expenditures other than land	Rental payments for machinery and equipment	Gross book value of depreciable assets at end of year	Standard error of estimates (percent)

¹Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1 percent.

²Sampling error is greater than 40 percent.

³Includes establishments with other noncorporate forms or organization plus establishments for which the information available did not permit classification by legal form of organization.

⁴Combined because of misclassification problems within these two industries. See Industry Series Report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521 and SIC 1531).

⁵"Value Added" equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$1,432,007,000 and for SIC 6552 were \$1,596,510,000.

⁶Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in Major Group 16 in 1967 are now included in the appropriate industry in Major Group 17.

Specialization in Types of Construction

This special report provides additional information from the 1972 Census of Construction Industries for construction establishments with payroll (employers). Final reports have been issued separately for each of the industries covered by the 1972 Census of Construction Industries. Those reports present data for establishments with payroll classified by industry and within industry, (1) by State, (2) by employment size, and (3) by total receipts size. Those reports also provide distributions of the construction receipts data by class of construction (new and maintenance and repair work), by ownership of construction projects (public and private), by location of construction work (State), and by type of construction work.

This report presents construction establishment statistics (employment; payroll; receipts; payments for materials, components, and supplies; payments for construction work subcontracted to others; new capital expenditures; value added; etc.) classified both by industry and by the extent to which establishments specialize in (receive construction receipts from) given types of construction work.

The extent to which construction establishments specialize in given types of construction work varies from industry to industry. A summation of the detailed industry data presented in this report would indicate that at the "United States-all industries" level more than 4 out of 5 construction establishments with payroll specialize in a given type of construction work. The establishments so specializing account for more than three-fourths of the total receipts of all employer establishments.

The establishment statistics, by type of construction work specialization, are shown for all establishments in an industry specializing 51 percent or more in a given type and for six detailed specialization-ratio categories: 51 to 59 percent, 60 to 69 percent, 70 to 79 percent, 80 to 89 percent, 90 to 99 percent, and 100 percent.

A summation of the detailed industry data presented in this report would indicate that at the United States-all industries level and at the 2-digit major SIC group levels, the establishments that specialize 51 percent or more tend, on the average, to be smaller in terms of employment and receipts than those establishments which do not specialize.

From the establishment data by industry and type of construction work-specialization ratio, it is possible to compute such relationships as payroll per dollar of total receipts; the ratio of payments for materials, components, and supplies to receipts; the ratio of payments for construction work subcontracted to others to total receipts, etc.

For example, in the Electrical Work Special Trade Contractors Industry (SIC 1731) there were 32,455 establishments with payroll. Of this total, 22,240 establishments (or 69 percent) specialized at least 51 percent in a given type of construction work. Thirty-eight percent of these establishments specialized in work on single-family houses. The detailed breakdown provided in the table indicates that, of the establishments specializing in single-family houses, 28 percent reported that they specialized 100 percent in work on single-family houses.

For these electrical work special trade contractor establishments which specialize solely in work on single-family houses, the following relationships may be calculated:

Value added per employee	\$15,035.00
Payroll per dollar of receipts	0.28
Payments for materials, components, and supplies per dollar of receipts	0.42
Payments for construction work subcontracted to others per dollar of receipts	0.03
New capital expenditures - other than land - per employee	\$435.74

Specialization in Types of Construction—Continued

A series of similar calculations for electrical work special trade contractor establishments that reported they specialized solely in office and bank buildings would indicate the following:

Value added per employee	\$19,774.00
Payroll per dollar of receipts	0.40
Payments for materials, components, and supplies per dollar of receipts	0.24
Payments for construction work subcontracted to others per dollar of receipts	0.04
New capital expenditure - other than land - per employee	\$240.52

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States.

The general and detailed statistics except "Construction Receipts For Specialized Type" reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities. Construction Receipts for Specialized Type represents only the construction receipts for the specific type of construction work.

Technical Notes

This report presents selected statistics for establishments classified according to industry and within industry by their degree of specialization in major types of construction work.

All employer establishments reporting in the 1972 Census of Construction Industries were asked to provide—in addition to their total 1972 construction receipts figure—a percentage breakdown of that figure by major types of construction work. These major types are described in detail in appendix A to this report.

For general tabulation purposes these reported percentages were applied to the construction receipts figure, for each establishment, to derive dollar values for each type of construction. For this report, these reported percentages were used to develop, for each establishment, the type of construction work - specialization ratio. If no major type of construction work accounted for at least 51 percent of construction receipts, the establishment was classified as specializing less than 51 percent in any type. Those establishments which reported that a given type of construction work accounted for 51 to 100 percent of their construction receipts were treated as follows: The establishment was assigned (1) an appropriate code to designate the type of construction work in which it "specialized," and (2) an additional code to indicate the extent to which it so specialized. These specialization ratio groups were: 100 percent, 90 to 99 percent, 80 to 89 percent, 70 to 79 percent, 60 to 69 percent, and 51 to 59 percent. For the purposes of this special report the selected statistics were tabulated by industry and within industry by these specialization codes. The detailed estimation procedures are described on page VIII part 3 of the introduction to this report.

TABLE 3. Selected Statistics for Construction Establishments With Payroll,

(Dollar figures in thousands. Detailed figures may not add to totals because of independent rounding or dropping of fractions. This table presents selected statistics for establishments according to their degree of specialization in major types of construction. In addition, data are not shown in this table for those industries for which the distribution of construction receipts by type of construction was not provided in table 5 of the Industry Reports Series (CC-72-1).)

TABLE 3. Selected Statistics for Construction Establishments With Payroll,

(Dollar figures in thousands. Detailed figures may not add to totals because of independent rounding or dropping of fractions. This table presents selected statistics for establishments according to their degree of specialization in major types of construction. In addition, data are not shown in this table for those industries for which the distribution of construction receipts by type of construction was not provided in table 5 of the Industry Reports Series (CC-72-1).)

Line number	Item	Total number of establishments	All employees (average)	Total payroll	Total receipts	Total construction receipts

TABLE 3. Selected Statistics for Construction Establishments With Payroll,

(Dollar figures in thousands. Detailed figures may not add to totals because of independent rounding or dropping of fractions. This table presents selected statistics for establishments according to their degree of specialization in major types of construction. In addition, data are not shown in this table for those industries for which the distribution of construction receipts by type of construction was not provided in table 5 of the Industry Reports Series (CC-72-1).)

Line number	Item	Total number of establishments	All employees (average)	Total payroll	Total receipts	Total construction receipts

TABLE 3. Selected Statistics for Construction Establishments With Payroll,

(Dollar figures in thousands. Detailed figures may not add to totals because of independent rounding or dropping of fractions. This table presents selected statistics for establishments according to their degree of specialization in major types of construction. In addition, data are not shown in this table for those industries for which the distribution of construction receipts by type of construction was not provided in table 5 of the Industry Reports Series (CC-72-1).)

TABLE 3. Selected Statistics for Construction Establishments With Payroll,

(Dollar figures in thousands. Detailed figures may not add to totals because of independent rounding or dropping of fractions. This table presents selected statistics for establishments according to their degree of specialization in major types of construction. In addition, data are not shown in this table for those industries for which the distribution of construction receipts by type of construction was not provided in table 5 of the Industry Reports Series (CC-72-1).)

Line number	Item	Total number of establishments	All employees	Total payroll	Total receipts	Total construction receipts

See footnotes at end of table.

Classified by Industry and Specialization in Types of Construction: 1972—Continued

construction work. See technical notes following special text for method of computing this specialization ratio. If the number of establishments or the total receipts for a given type of specialization are relatively insignificant, data may not be shown.

Payments for construction work sub-contracted to others	Payments for materials, components, and supplies	Net construction receipts (E-G)	Value added (D-G-H)	Capital expenditures other than land	Rental payments for machinery and equipment	Gross book value of depreciable assets at end of year	Standard error of estimates (percent)				Line number

TABLE 3. Selected Statistics for Construction Establishments With Payroll,

(Dollar figures in thousands. Detailed figures may not add to totals because of independent rounding or dropping of fractions. This table presents selected statistics for establishments according to their degree of specialization in major types of construction. In addition, data are not shown in this table for those industries for which the distribution of construction receipts by type of construction was not provided in table 5 of the Industry Reports Series (CC-72-1)

See footnotes at end of table.

Classified by Industry and Specialization in Types of Construction: 1972—Continued

construction work. See technical notes following special text for method of computing this specialization ratio. If the number of establishments or the total receipts for a given type of specialization are relatively insignificant, data may not be shown.

Payments for construction work sub-contracted to others	Payments for materials, components, and supplies	Net construction receipts (E-G)	Value added (D-G-H)	Capital expenditures other than land	Rental payments for machinery and equipment	Gross book value of depreciable assets at end of year	Standard error of estimates (percent)				Line number

TABLE 3. Selected Statistics for Construction Establishments With Payroll.

(Dollar figures in thousands. Detailed figures may not add to totals because of independent rounding or dropping of fractions. This table presents selected statistics for establishments according to their degree of specialization in major types of construction. In addition, data are not shown in this table for those industries for which the distribution of construction receipts by type of construction was not provided in table 5 of the Industry Reports Series (CC-72-1).)

TABLE 3. Selected Statistics for Construction Establishments With Payroll,

(Dollar figures in thousands. Detailed figures may not add to totals because of independent rounding or dropping of fractions. This table presents selected statistics for establishments according to their degree of specialization in major types of construction. In addition, data are not shown in this table for those industries for which the distribution of construction receipts by type of construction was not provided in table 5 of the Industry Reports Series (CC-72-1).)

Line number	Item	Total number of establishments	All employees (average)	Total payroll	Total receipts ¹	Total construction receipts

Classified by Industry and Specialization in Types of Construction: 1972—Continued

construction work. See technical notes following special text for method of computing this specialization ratio. If the number of establishments or the total receipts for a given type of specialization are relatively insignificant, data may not be shown.

Payments for construction work sub-contracted to others	Payments for materials, components, and supplies	Net construction receipts (E-G)	Value added (D-G-H)	Capital expenditures other than land	Rental payments for machinery and equipment	Gross book value of depreciable assets at end of year	Standard error of estimates (percent)				Line number

TABLE 3. Selected Statistics for Construction Establishments With Payroll,

(Dollar figures in thousands. Detailed figures may not add to totals because of independent rounding or dropping of fractions. This table presents selected statistics for establishments according to their degree of specialization in major types of construction. In addition, data are not shown in this table for those industries for which the distribution of construction receipts by type of construction was not provided in table 5 of the Industry Reports Series (CC-72-1).)

TABLE 3. Selected Statistics for Construction Establishments With Payroll,

(Dollar figures in thousands. Detailed figures may not add to totals because of independent rounding or dropping of fractions. This table presents selected statistics for establishments according to their degree of specialization in major types of construction. In addition, data are not shown in this table for those industries for which the distribution of construction receipts by type of construction was not provided in table 5 of the Industry Reports Series (CC-72-1).)

Line number	Item	Total number of establishments	All employees (average)	Total payroll	Total receipts	Total construction receipts

16	Establishments specializing less than 51 percent.	391	10 268	80 921	463 559	139 929	42 776
17	Establishments specializing 51 percent or more.	7 523	52 046	395 825	2 664 514	1 178 750	1 104 504

Note: Not all types of construction work are shown for every industry. Therefore, sums of detail presented will not equal totals shown for all establishments in industry specializing 51 percent or more. Data for percent specialization lines included in brackets were withheld to avoid disclosing figures for individual companies and/or because estimates did not meet publication standards on the basis of either the associated standard error or a consistency review. All such figures are included in higher-level totals.

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in the underscored figures on an adjoining line unless the adjoining line is zero or all figures for that column are disclosures.

S Withheld because estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1 percent.

Classified by Industry and Specialization in Types of Construction: 1972—Continued

construction work. See technical notes following special text for method of computing this specialization ratio. If the number of establishments or the total receipts for a given type of specialization are relatively insignificant, data may not be shown.

Payments for construction work sub-contracted to others	Payments for materials, components, and supplies	Net construction receipts (E-G)	Value added (D-G-H)	Capital expenditures other than land	Rental payments for machinery and equipment	Gross book value of depreciable assets at end of year	Standard error of estimates (percent)				Line number

^aOnly data for all establishments specializing 51 percent or more are provided.

^aSampling error is greater than 40 percent.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractor--Single-Family Houses and Operative Builders (SIC 1521 and SIC 1531).

²For SIC 1521 and SIC 1531 and SIC 6552, "value added" equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$1,432,057(000) and for SIC 6552 were \$1,596,510 (000).

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but data are not exactly comparable. Special trade contractors primarily engaged in non-building construction and classified in major group 16 in 1967 are now included in appropriate industry in major group 17.

Appendixes

APPENDIX A. Explanation of Terms Used in Collection and Publication of Data

Construction—Construction covers the erection, maintenance, and repair of immobile structures (together with service facilities which become integral parts of structures and are essential to their use); the physical development of land for purposes other than agriculture; and the demolition of existing structures.

“Structures” are defined broadly to include—in addition to buildings—such works as highways and streets; dams; silos and water towers; electric light and power transmission and distribution lines; petroleum and gas pipelines and distribution lines; radio, television, and radar towers; water supply lines and sewers; and all similar work which is built into or affixed to the land.

Construction also covers those types of service facilities which, when installed, become an integral part of the structure and are necessary to the use of the structure. These include such components as plumbing, heating and ventilation, central air conditioning, electrical facilities, and elevators and escalators.

Changes to structures involving exterior or interior walls, such as the erection of partitions in a loft building to convert it to offices or the remodeling of a store front, are considered construction.

The erection of scaffolding and/or forms for concrete work is considered construction.

Clearing and developing of the site is a part of construction.

In general, construction does not include the furnishings and equipment designed to prepare the structure for a specific use. Examples of such equipment are steam tables in restaurants, pews in churches, lockers in school buildings, printing presses or stamping machines in industrial buildings, and refrigerators in homes. The installation of such furnishings and equipment is, however, included in construction when performed by construction contractors. However, the erection of “processing equipment” in certain industries, where such equipment is largely fabricated on the site, is defined as construction. (For example, the towers, vats, and related piping at chemical plants and petroleum refineries, or the blast furnace complex at steel plants.)

Construction does not include mobile structures; such as, trailers, mobile homes, floating drydocks, and ships. Also excluded from construction are those operations associated with extraction of minerals (drilling oil and gas wells, sinking mine shafts, stripping overburden, tunneling and shoring mines, open-pit mining, and activity primarily devoted to the production of sand, gravel, and other minerals by dredging) and closely related support activities on mineral properties (erecting, repairing, and dismantling of drilling rigs; building of well foundations; excavating slush pits; and cementing wells). Work which is an integral part of farming operations (such as, plowing, terracing, and the digging of drainage ditches) is also excluded from construction.

Distinction Between New Construction and Maintenance and Repairs—Construction is composed of two broad categories of activities: (1) New construction and (2) maintenance and repairs. “New construction” is defined to include the complete, original erection of structures and essential service facilities, as well as additions and alterations. Additions and alterations include such construction as the addition of a wing, a story or stories, conversion of space to other uses where structural changes are involved, or the initial installation of integral building services equipment in existing structures (e.g., elevators, escalators, or central air-conditioning systems). “Maintenance and repairs” relates to the restoration of existing buildings or other structures or their related service facilities, including replacement of integral parts. Repainting, repapering, reroofing, redredging, railroad maintenance-of-way, and street and highway patching and minor resurfacing are included.

Number of Establishments—Includes all establishments in business at any time during the year. As such it covers all full year and all part year operations. Construction establishments which were inactive or idle for the entire year were not included.

Number of Proprietors and Working Partners—This information was not collected on the census report forms. The data shown for this item in the report is based on crediting each sole proprietorship establishment with one active proprietor and each partnership establishment with two working partners. The partnership factor was based on information received during a large scale test conducted in prior years.

Employment and Related Items—The report form requested separate information on construction workers, all other employees, and total employees on the payroll in the pay periods including the 12th of March, May, August, and November. The categories defined on the questionnaire are as follows:

All Employees—Comprises all full-time and part-time employees on the payrolls of construction establishments who worked or received pay for any part of the pay period which included the 12th of March, May, August, and November. Included are all persons on paid sick leave, paid holidays, and paid vacations during these pay periods. Officers of corporations are included; proprietors and partners of unincorporated firms are, however, excluded from the count of employees.

Construction Workers—Includes all workers (up through the working foreman level) directly engaged in the construction operations—such as painters, carpenters, plumbers, electricians, etc. Included are journeymen, mechanics, apprentices, laborers, truck drivers and helpers, equipment operators, and on-site record keepers and watchmen. Supervisory employees

APPENDIX A—Continued

above the working foreman level are excluded from this category but are included in the "all other employees" category.

All Other Employees—Includes employees engaged in the following activities: Executive, purchasing, accounting, personnel, professional, and technical activities, and routine office functions. Also included are supervisory employees above the working foreman level.

The detailed employment data for the pay periods including the 12th of March, May, August, and November and described above are published in the detailed statistics tables of the final reports. In addition "annual average employment" figures are also provided for each category of employees. The "annual average" is calculated for each establishment and is derived by dividing the sum of the data reported for March, May, August, and November by "4."

This approach to an "annual average" was designed to simplify the schedule format and the reporting requirements of respondents, since it was found that the industry average of these four selected pay periods approximates very closely the average employment for the year that would be obtained from using pay periods in all 12 months for almost all of the construction industries.

In addition to the reports sent to construction establishments, information was collected on employment for the pay period including the 12th of March and annual payrolls for central administrative offices or auxiliary units of multi-establishment companies servicing more than one construction establishment. However, these figures are not included in this report. They will be included in the economic censuses report entitled "1972 Enterprise Statistics."

Payrolls—Includes the gross earnings paid in the calendar year 1972 to all employees on the payroll of construction establishments. Respondents were told that they could follow the definition of payrolls used for completing the Employer's Quarterly Federal Tax Return, Treasury Form 941. It includes all forms of compensation such as salaries, wages, commissions, dismissal pay, all bonuses, vacation and sick leave pay, and the cash equivalent of compensation in kind, prior to such deductions as employees' Social Security contributions, withholding taxes, group insurance, union dues, and savings bonds. The total includes salaries of officers of these establishments, if a corporation; it excludes payments to the proprietor or partners, if an unincorporated concern. It should be noted that this payroll definition does not include employers' Social Security contributions, or other nonpayroll labor costs incurred by employers, such as for employees' pension plans, group insurance premiums, and workmen's compensation.

Payroll data were collected and tabulated for the employment categories described above.

As in the case of employment figures, the payrolls of separate central administrative offices and auxiliary units of multi-establishment companies are not included in the totals.

Total Selected Payments—Represents the total of payments for construction work let out to other construction contractors and payments for materials, components, and supplies. Capital expenditures and rental payments for machinery and equipment are **not** included in total selected payments.

Payments for Construction Work Let Out by Establishments to Other Construction Contractors—Includes all payments made during 1972 for construction work subcontracted out to other construction contractors. General contractors were instructed to include payments to subcontractors. Builders were instructed to include payments made to general contractors and also payments made directly to subcontractors. Special trade contractors were instructed to include payments made to subcontractors. The payments made by the reporting establishment for its purchases of materials, components, and supplies are not included here even if the materials were provided to a subcontractor for his use. Such purchases of materials, components, and supplies are reported under a separate category, "payments for materials, components, and supplies." However, if payments to subcontractors covered materials **purchased directly by the subcontractors**, then the total of such payments (including material charges) should have been reported as payments for construction work let out to others.

When it was the practice for the State, local governments, or their special authorities, or utility companies to undertake the installation of certain utility services or the construction of roads, and then to bill the contractors for such work, payments in 1972 for such work were included in this item.

Payments made for the rental of construction machinery or equipment are not included.

Payments for Materials, Components, and Supplies—Includes the total payments made by the reporting establishments during 1972 for the purchase of all materials, components, and supplies, and fuels used for construction purposes. Supplies include expendable tools which are charged to current accounts. Payments include freight and other direct charges incurred by the reporting establishment in acquiring the materials, components, and supplies. Payments represent the amount paid after discounts. Payments also include the value of materials, components, and supplies obtained from other establishments of the respondent's company.

Payments for materials, components, and supplies include only payments for physical goods. Services used or overhead charges are excluded. Excluded are the cost of such services as advertising, telephone, telegraph and cable, insurance, developmental and research services of engineering, management,

APPENDIX A—Continued

marketing, and other professional consultants, etc., unless charges for such services are included in the prices paid for materials. Excluded also are such overhead items as depreciation charges against plant and equipment, rent and rental allowances, interest payments, royalties, and patent fees.

Also excluded are payments for land, for the rental of construction machinery or equipment, and payments for construction work let out to other construction contractors.

This item includes payments for materials, supplies, and components used by the reporting establishments in the construction for themselves of new plants or equipment which is chargeable to their fixed assets accounts. Payments for materials bought and resold to others are also included. As indicated above, this item also includes payments made for direct purchases of materials, components, and supplies even though subsequently provided to subcontractors for their use.

Materials furnished to contractors by the owners of projects are, of course, not included.

Total Receipts During 1972—Includes all receipts from general contracting, special trades contracting and subcontracting, and land development and improvement work. Includes all receipts from the sales of land (not recorded as fixed assets of the reporting establishments) and the sales of buildings built for sale. Does not include monies realized from the sale or other disposition of the establishment's fixed assets. Also included are all other receipts from the reporting establishment's other business operations (rental of equipment to others, wholesale or retail sales, etc.).

Money obtained during the year in the form of construction loans is not treated as receipts.

Also excluded are receipts from operations in foreign countries and nonoperating income, such as interest, dividends, etc.

Total Construction Receipts—Includes all receipts during 1972 from general contracting, special trades contracting and subcontracting, and land developing and land improvement work. Included are receipts for maintenance and repair construction work as well as for new construction. Also included is the value of any construction work done by the reporting establishments for themselves.

Builders were instructed to include in this item their 1972 receipts from the sales of buildings and other structures built for sale (excluding from these receipts all value of the land but including the value of any improvements this establishment made to the land). Builders, who when selling a new home or other building accept an existing one in trade, were instructed to include here in construction receipts the estimated value of the trade-in.

Also included in construction receipts were fees received as sponsors of joint ventures and fees received as agents for owners (for construction work).

Receipts for separately definable architectural and engineering work done by the reporting establishment for others, consultants' fees, and receipts from the rental of equipment to others are not included here.

Establishments filing this report which engaged in the sale and installation of such construction components as plumbing, heating, and central air-conditioning supplies and equipment; lumber and building materials; paint, glass, and wallpaper; and electrical and wiring supplies for construction purposes were instructed to include here as construction receipts, both the receipts for the installation and the receipts covering the value (selling price) of the items installed. (Receipts covering the selling price of such items sold, but not installed by the reporting establishments, are included in "other business receipts.")

Land Receipts—Includes receipts from the sale of land held for sale or land sold in connection with the sale of houses and other structures. Respondents were requested to exclude from these receipts, the value of any improvements they made to the land prior to the sale. (The receipts covering these improvements are included as "construction receipts.")

Other Business Receipts—Includes all business receipts not reported as "construction receipts," or "land receipts," but included in "total business receipts." Other business receipts include business receipts from retail and wholesale trade, rental of equipment, manufacturing, transportation, legal service, insurance, finance, rental of property and other real estate operations, and other nonconstruction activities. Consultants' fees as well as receipts for separately definable architectural and engineering work for others are included here.

Receipts for Work Subcontracted In From Others—The report form requested the responding establishments to report whether or not they had obtained receipts during 1972 for work done for other construction contractors or builders. Those establishments reporting "Yes" were asked to report the approximate percent of total construction receipts accounted for by such work. For each establishment the percentages so reported were applied to the reported construction receipts to develop a value for this item.

Net Construction Receipts—The aggregate of construction receipts reported by all construction establishments in each of the several industry, State, or other groupings in this census contains varying amounts of duplication since the construction work (and the receipts) of one firm may in turn be subcontracted to other construction firms and also be included in their receipts. To avoid this duplication a "net construction receipts" figure has been derived for each establishment by subtracting the payments made for construction work subcontracted to others from the construction receipts.

Value Added—Duplication in receipts between construction and other industries results from the use of products of other industries as input materials by construction establishments. "Value added" avoids this duplication and is, for most purposes, the best measure for comparing the relative economic importance of industries or areas. "Value added" is defined in the 1972 Census of Construction Industries as equal to total receipts less payments for construction work subcontracted to others and payments for materials, components, and supplies. However, for SIC 6552 and SIC 1531 where land receipts are significant, a modification was made in the calculation of value added. For these industries value added is defined as equal to total receipts less land receipts, payments for construction work subcontracted to others and payments for materials, components, and supplies.

Capital Expenditures (Excluding Land)—Refers to all costs actually incurred during 1972 which are or will be chargeable to the fixed assets accounts of the reporting establishments and which are of the type for which depreciation accounts are ordinarily maintained. These expenditures cover the acquisition, the construction, and the major alteration of the reporting establishment's own buildings and other structures (whether purchased, constructed under contract, or constructed by the reporting establishment's own forces) and the acquisition of machinery and equipment. Included are payments made under agreements which the Internal Revenue Service regulations consider conditional sales contracts and which as a result are capitalized.

Respondents were instructed not to include any expenditures actually made prior to 1972 or after the end of 1972. For example, if construction of a building for an establishment's own use was begun before 1972 and was not completed until after 1972, only those costs which were actually incurred during 1972 were reported.

If capital expenditures were not recorded directly at the establishment level but were handled centrally at the company or division level, respondents were requested to report appropriate estimates for the individual establishments.

New Structures, Additions, and Related Facilities—Includes the total expenditures during 1972 for new buildings and structures, for major additions and alterations of buildings and structures, and expenditures for other facilities for the reporting establishment's use (such as roads, docks, tracks, parking lots, fences, etc.). Expenditures for land are excluded.

New Machinery and New Equipment—Includes expenditures for new machinery and new equipment. This item also includes capitalized repairs and improvements to used machinery and equipment.

Used Structures and Related Facilities Acquired From Others—Covers expenditures for used structures and related facilities acquired from others.

Used Machinery and Used Equipment Acquired From Others—Includes expenditures for used machinery and equipment acquired from others. Capitalized repairs and improvements to such equipment are reported as new machinery and equipment.

Fixed Assets and Depreciation—Refers to the value of all fixed tangible assets such as buildings and other structures (offices, shops, etc.); stationary machinery (generators, shop equipment, etc.); mobile machinery (tractors, trucks, etc.); and other equipment (office furniture and fixtures, etc.).

Not included were such items as current assets, depletable assets, intangible assets, nondepreciable assets, and assets which had been sold, scrapped, or otherwise destroyed during 1972.

Data on fixed assets and depreciation were collected separately for (1) structures, additions, and related facilities, (2) machinery and equipment, and (3) the total of both.

The respondents were asked to report the gross book value at the end of 1972, the accumulated depreciation at the end of 1972, and net value at the end of 1972 of the fixed assets for which depreciation accounts are ordinarily maintained. Gross book value represented the acquisition cost (original cost or other basis) of such depreciable assets.

Payments Made for Renting or Leasing Machinery and Equipment—Includes all payments made during 1972 for the renting or leasing of construction machinery and equipment, transportation equipment, production equipment, office equipment, furniture and fixtures, and scaffolding. Excluded are payments for rental of land and buildings.

Also excluded are payments made under agreements which the Internal Revenue Service regulations consider conditional sales contracts and which as a result are capitalized. Instead, such payments are included in "capital expenditures." Also excluded are payments made under agreements which are in effect true subcontract construction arrangements. Such payments are included in "payments for construction work let out by establishments to other construction contractors."

Classifications of Construction Work—To provide more detailed information, reporting establishments were requested to report various breakdowns, using percentages, of their construction receipts figures. For tabulation purposes these reported percentages were then applied to the construction receipts figure to derive, for each establishment, dollar values for each such classification.

It should be kept in mind that these various detailed breakdowns apply to "construction receipts," not to "net construc-

tion receipts." To provide an indication of the extent of duplication in the construction receipts figures, each statistical table containing these data also provides information on total construction receipts, total payments for work subcontracted to others, and net construction receipts.

Types of Construction Engaged in During 1972—The purpose of this item is to provide a breakdown of the construction receipts in order to show the types of buildings, structures, or other facilities on which the work of the establishment was performed. **Both new construction and maintenance and repair construction are included.** The instructions to the respondent stated that ideally, each building, structure, or other facility should be classified in terms of its own function. For example, a restaurant building would be classified in the restaurant category whether it was designed as a commercial restaurant building or an auxiliary unit of an educational institution. However, it was recognized that complex projects consisting of two or more different types of buildings, structures, or other facilities are difficult to classify and that sufficient information is seldom available. Respondents were told that such complex projects could, therefore, be classified in accordance with the major function of the total complex.

Building Construction

Single-Family Houses—Includes single-family homes, townhouses, and rowhouses.

Multifamily Residential Buildings—Includes houses for two or more families, apartment houses, etc.

Other Residential Buildings—Includes hotels, motels, dormitories, nurses' homes, and other nonhousekeeping residential structures.

Industrial Buildings and Warehouses—Includes all industrial buildings and plants which are used to house the production, assembly, and warehousing activities of those establishments. Commercial warehouses, cold storage plants, grain elevators, and storage buildings are also included here.

Office and Bank Buildings—Includes all buildings which are used primarily for office space or to house banks and other financial institutions. It also includes government administrative buildings.

Stores, Restaurants, Public Garages, and Auto Service Stations—Includes all buildings which are intended for use primarily in the wholesale, retail, and service trades. For example, complete shopping centers, department stores, drug stores, restaurants, public garages, and auto service stations are in this category.

Religious Buildings—Includes all buildings which are intended for religious services and functions, such as churches, synagogues, convents, monasteries, seminaries, etc.

Educational Buildings—Includes all buildings which are used directly in the administrative and instructional activities of establishments furnishing formal academic or technical courses. These establishments include colleges and universities as well as elementary and secondary schools, and correspondence, commercial, and trade schools. Libraries, museums, and art galleries, as well as laboratories which are not a part of a manufacturing establishment, are also included as educational.

Hospital and Institutional Buildings—Includes all buildings which are primarily engaged in providing hospital and institutional care, such as general, mental, or tuberculosis hospitals, clinics or infirmaries and sanitariums, and such institutions as nursing homes, homes for the aged, orphanages, etc.

Amusement, Social, and Recreational Buildings—Includes buildings which are used primarily for entertainment, social, and recreational activities, such as sports arenas, theaters, music halls, golf and country club buildings, fraternal organization lodges, skating rinks, bowling alleys, and indoor swimming pools, etc.

Other Nonresidential Buildings—Includes buildings which are not classified elsewhere, such as fire stations, bus and air passenger terminals, and hangars, etc.

Nonbuilding Construction

Highways and Streets—Includes streets, roads, alleys, sidewalks, curbs and gutters, and forest and park roads. Also includes—in connection with highway and street construction—new and extension of old culverts, right-of-way drainage, erosion control, lighting, highway signs and guard rails, and earthwork protective structures.

Bridges and Elevated Highways—Includes elevated highways, viaducts, and bridges.

Tunnels—Includes highway, pedestrian and railway tunnels, but excludes subways.

Dam and Reservoir Construction—Includes all dams and reservoirs.

Marine Construction—Includes dredging, underwater rock removal, breakwaters, navigational channels, dikes, jetties, locks, etc.

Harbor and Port Facility Construction—Includes the construction of docks, piers, wharves, etc.

Conservation and Development Construction—Includes land reclamation, irrigation projects, drainage canals, levees, flood control projects, etc.

APPENDIX A—Continued

Power and Communication Transmission Lines, Towers, and Related Facilities—Includes telephone and telegraph lines, television and radio towers, electric light and power facilities, etc.

Power Plants—Includes electric generating plants, atomic energy plants, nuclear reactors, etc.

Sewers, Water Mains, and Related Facilities—Includes sanitary and storm sewers, water supply systems, and related facilities.

Sewage Treatment and Water Treatment Plants—Includes water filtering plants, disposal plants, water softening plants, etc.

Pipe Line Construction—Includes pipe line construction for the transmission of gas and petroleum products, liquid oxygen, etc.

Mass Transit Construction—Includes railroads, subways, elevated railways, etc.

Heavy Industrial Facilities—Includes blast furnaces, petroleum refineries, chemical complexes, mining appurtenances (such as tipplers and washeries), etc.

Other Heavy Construction—Includes military and space facilities.

Other Types of Construction Work—Includes any types of construction not covered by the above categories.

Location of Construction Work—The report form requested respondents to report each State in which they engaged in construction work and the extent (percent of construction receipts) of that work.

Class of Construction—The purpose of this item is to provide a breakdown of construction receipts between new construction and maintenance and repair work.

The report form requested respondents to report the extent construction receipts were derived from "new construction work" and/or "maintenance and repair construction." See page A1 for detailed definitions.

Ownership of Construction Projects—The purpose of this item is to provide a breakdown of construction receipts during 1972 between public construction and private construction. This classification relates to the **ownership** of the projects or work undertaken and not to the financing. Public construction includes projects owned by the Federal, State, or local governments including public authorities and special districts.

**APPENDIX B. Standard Industrial Classification Titles for Industries and Industry Groups
Covered by the 1972 Census of Construction Industries**

SIC code	Industry titles	SIC code	Industry titles
Construction Industries		Construction Industries—Continued	
15	BUILDING CONSTRUCTION—GENERAL CONTRACTORS AND OPERATIVE BUILDERS		CONSTRUCTION—SPECIAL TRADE CONTRACTORS—Continued
152	General Building Contractors—Residential Buildings	172	Painting, Paper Hanging, and Decorating
1521	General Contractors—Single-Family Houses	1721	Painting, Paper Hanging, and Decorating
1522	General Contractors—Residential Buildings, Other Than Single-Family	173	Electrical Work
153	Operative Builders	1731	Electrical Work
1531	Operative Builders	174	Masonry, Stonework, Tile Setting, and Plastering
154	General Building Contractors—Nonresidential Buildings	1741	Masonry, Stone Setting, and Other Stonework
1541	General Contractors—Industrial Buildings and Warehouses	1742	Plastering, Drywall, Acoustical, and Insulation Work
1542	General Contractors—Nonresidential Buildings, Other Than Industrial Buildings and Warehouses	1743	Terrazzo, Tile, Marble, and Mosaic Work
16	CONSTRUCTION OTHER THAN BUILDING CONSTRUCTION—GENERAL CONTRACTORS	175	Carpentering and Flooring
161	Highway and Street Construction, Except Elevated Highways	1751	Carpentering
1611	Highway and Street Construction, Except Elevated Highways	1752	Floor Laying and Other Floorwork, Not Elsewhere Classified
162	Heavy Construction, Except Highway and Street Construction	176	Roofing and Sheet Metal Work
1622	Bridge, Tunnel, and Elevated Highway Construction	1761	Roofing and Sheet Metal Work
1623	Water, Sewer, Pipe Line, Communication and Power Line Construction	177	Concrete Work
1629	Heavy Construction, Not Elsewhere Classified	1771	Concrete Work
17	CONSTRUCTION—SPECIAL TRADE CONTRACTORS	178	Water Well Drilling
171	Plumbing, Heating (Except Electric), and Air Conditioning	1781	Water Well Drilling
1711	Plumbing, Heating (Except Electric), and Air Conditioning	179	Miscellaneous Special Trade Contractors
		1791	Structural Steel Erection
		1793	Glass and Glazing Work
		1794	Excavating and Foundation Work
		1795	Wrecking and Demolition Work
		1796	Installation or Erection of Building Equipment, Not Elsewhere Classified
		1799	Special Trade Contractors, Not Elsewhere Classified
		Other Industries	
		6552	Subdividers and Developers, Except Cemeteries

APPENDIX C. Instructions for Respondents and Census Report Form

I. GENERAL INSTRUCTIONS

INTRODUCTORY NOTE

Modern electronic processing methods require that the Bureau of the Census use identification numbers to identify all report forms and all related correspondence. The Census Bureau 11-digit Census file number assigned to your report is clearly indicated at the left side of the top line of information imprinted in the name and address box of the questionnaire. Please copy this Census file number to your file copy of the questionnaire. If you write to the Census Bureau regarding this report, please use this Census file number.

WHO SHOULD REPORT?

Every concern which receives a form is required to submit a separate report for each of its "construction establishments" in the United States, including Alaska and Hawaii. Do not include foreign construction activities.

For the purposes of this report, a "construction establishment" is defined as a relatively permanent office, or other place of business, at which or from which the usual business activities related to construction are conducted. (With the exceptions indicated below, a relatively permanent office is one which has been established for the management of more than a single project or job and which is expected to be maintained on a continuing basis.) Such "establishment" activities include (but are not limited to) estimating, bidding, scheduling, purchasing, supervision, and operation of the actual construction work being conducted at one or more construction sites.

Separate construction reports are **not** required for each project or construction site. Information on these projects and sites should be **included**, however, in the report of the construction establishment responsible for the work at these construction projects and sites. The report should also **include** information on the construction establishment's operations at temporary locations or facilities established specifically to meet the demands of such construction work.

There are two exceptions to the above general rule:

1. In case of construction joint ventures, a separate establishment report is required covering the joint venture entity even though established to undertake only a given project.
2. To the extent that separate legal entities are set up to carry out only a given project or part of a project, then separate establishment reports are also required for each legal entity.

Concerns with more than one construction establishment must submit a separate report for each such establishment operated during all or any part of 1972. Do not combine reports for two or more establishments. If you have not received a sufficient number of forms to cover each of the construction establishments of this concern, please request additional copies by

writing to the Economic Census Operations Branch, Bureau of the Census, 1201 East Tenth Street, Jeffersonville, Indiana 47130.

If a concern is engaged in two or more distinctly different lines of economic activity (wholesale or retail trade, service, manufacturing, construction, mining, etc.) at the **same** place of business, it should also request and file a separate report appropriate for each such activity, provided separate records are maintained or substantially accurate estimates can be prepared for these separate activities.

If a separate establishment report cannot be prepared for each such activity, then a construction report should be filed covering all activities of that establishment, provided the 1972 gross receipts from construction activities **exceeded** the gross receipts from each of its other activities.

If the 1972 gross receipts from construction activities do not exceed the gross receipts from each of its other activities, then appropriate entries should be made in items 1A through 1G, 3, 8, 9A, 9B, and 14 of the construction report and the questionnaire returned.

As indicated above, a separate report should be filed by each business concern for each of its construction establishments. To the extent that several companies (i.e., sole proprietorships, partnerships, corporations, syndicates, cooperatives, etc.) share or operate out of a single office or place of business, each such legal entity engaged in construction should be considered, for the purposes of this report, as a separate firm and each should file the necessary "establishment" report covering its own activities which it conducts in or from that common office.

Examples of construction establishments are:

1. The office or branch office of a construction contractor or builder. (In some cases the "office" may actually be in the home of the contractor or builder.)
2. The office or shop of a special trade contractor. (Contractors specializing in activities such as plumbing, painting, carpentering, etc.)
3. A construction division or subsidiary of a manufacturing, mining, or business firm which undertakes construction for others. (Even if the division or subsidiary only undertakes construction for the parent firm, it should be considered a construction establishment.)
4. A store or shop engaged in retail or wholesale trade, service or manufacturing, and **also** engaged in construction which meets either one of the following tests:
 - a. The store or shop can file a separate report for its construction activity.
 - b. The store or shop cannot file a separate report for its construction activity, but gross receipts from construction exceed the gross receipts from each of its other activities.

APPENDIX C—Continued

5. A separate legal entity which has been established for the purposes of undertaking a large construction project as a joint venture.

6. A real estate office or an architectural and/or engineering office that also undertakes construction and which meets either one of the following tests:

- a. The office can file a separate report for its construction activity.
- b. The office cannot file a separate report for its construction activity, but gross receipts from construction exceed the gross receipts from each of its other activities.

IS THE REPORT REQUIRED?

Response to this inquiry is required by law (Title 13 U.S. Code). By the same law, your report to the Census Bureau is confidential. It may be seen only by sworn Census employees and may be used only for statistical purposes. The law also provides that copies retained in your files are immune from legal process.

For the purposes of this report you may use any system of accounting under which you maintain your books, such as the cash, accrual, or completion of contract methods. You may estimate or prorate if book records are not readily available.

WHAT IS CONSTRUCTION?

Construction is composed of two broad categories of activities: (1) New construction and (2) Maintenance and repairs. "New construction" is defined to include the complete, original erection of structures and essential service facilities, as well as additions and alterations. Additions and alterations include such construction as the addition of a wing, a story or stories, conversion of space to other uses where structural changes are involved, or the initial installation of integral building services equipment in existing structures (e.g., elevators, escalators, or central air-conditioning systems). "Maintenance and repairs" relates to the restoration of existing buildings or other structures or their related service facilities, including replacement of integral parts. Repainting, repapering, reroofing, redredging, railroad maintenance-of-way, and street and highway patching and minor resurfacing are included.

Construction covers the erection, maintenance and repair of immobile structures (together with service facilities which become integral parts of structures and are essential to their use); the physical development of land for purposes other than agriculture; and demolition of existing structures.

Construction does not include shipbuilding or other mobile structures such as trailers, mobile homes and

floating drydocks. Also excluded from construction are those operations associated with extraction of minerals (drilling oil and gas wells, sinking mine shafts, stripping overburden, tunneling and shoring mines, open-pit mining, and activity primarily devoted to the production of sand, gravel and other minerals by dredging) and closely related support activities on mineral properties (erecting, repairing, and dismantling of drilling rigs; building of well foundations; excavating slush pits; cementing wells) except for the building of mineral preparation plants. Work which is an integral part of farming operations (such as, plowing, terracing, and the digging of drainage ditches) is also excluded from construction.

"Structures" are defined broadly to include — in addition to buildings — such works as highways and streets, dams, silos and water towers; electric light and power transmission and distribution lines; petroleum and gas pipelines and distribution lines; radio, television, and radar towers; water supply lines and sewers; and all similar work which is built into or affixed to the land.

Construction also covers those types of service facilities which, when installed, become an integral part of the structure and are necessary to the use of the structure. These include such components as plumbing, heating and ventilation, central air-conditioning, electrical facilities, and elevators and escalators.

In general, construction does not include the furnishings and equipment designed to prepare the structure for a specific use. Examples of such equipment are steam tables in restaurants, pews in churches, lockers in school buildings, printing presses or stamping machines in industrial buildings and refrigerators in homes. The installation of such furnishings and equipment is, however, included in construction when performed by construction contractors. However, the erection of "processing equipment" in certain industries, where such equipment is largely fabricated on the site, is defined as construction. (For example, the towers, vats, and related piping at chemical plants and petroleum refineries, or the blast furnace complex at steel plants.)

Changes to structures involving exterior or interior walls, such as the erection of partitions in a loft building to convert it to offices or the remodeling of a store front, are considered construction.

The erection of scaffolding and/or forms for concrete work is considered construction.

Clearing and development of the site is a part of construction.

HOW TO REPORT IF NOT ENGAGED IN CONSTRUCTION ACTIVITIES

If you did not engage in construction activities during any part of 1972, you should complete items 1A through 1G, 3, 8, 9A, 9B, and 14.

APPENDIX C—Continued

HOW TO REPORT FOR ESTABLISHMENTS NOT IN OPERATION DURING THE YEAR 1972

If any of your company's construction establishments were not in operation at all during the year, you should return the report for each such establishment with the proper entries in item 1E, "Changes in ownership or organization of this establishment during 1972." If a construction establishment was not operating, but had paid employees or obtained business receipts during the year, the information should be reported in the appropriate items of the report form.

WHAT PERIOD SHOULD EACH REPORT COVER?

Each report should cover the calendar year 1972. If your book records are not on a calendar year basis, carefully prepared estimates will be acceptable. If reporting on a calendar year basis will involve considerable additional costs, and your fiscal year covers at least ten months of the calendar year (i.e., ends between October 31, 1972, and February 28, 1973), you may report on a fiscal year basis. However, all employment and payroll figures should relate to the calendar year rather than the fiscal year. (These calendar year payroll records should be available from your tax records.)

In the certification (item 14), the dates should show the exact period which the report covers. Thus, if an establishment began to operate or ceased to operate within the year, the dates should span only that part of the year during which the establishment was in operation. If the ownership changed during the year, complete the report only for that part of the year in which your company owned or operated the establishment.

WHAT ACTIVITIES SHOULD BE REPORTED?

Each report should cover all the activities conducted by the establishment. This includes maintenance and repair work as well as new construction. The reported figures should also include activities such as rental

of construction equipment, retail and wholesale sales, equipment maintenance, storage, research, record keeping, health, safety, cafeteria, and other services, but only **when carried on by the construction establishment**. The construction establishment reports should exclude sales branches, sales offices, research laboratories, retail stores, manufacturing and mining activities, and general administrative offices, **when these are operated as separate establishments**.

Please note that establishments engaged in the activities listed on the questionnaire in item 9B (except those noted under "Business Activities Other Than Construction") are considered to be construction for the purposes of this report.

WHEN IS THE REPORT DUE?

This report form should be completed and returned before the due date indicated on the face of the report form. A self-addressed return envelope that requires no postage has been enclosed for your convenience. If filing by that date causes undue burden, a prompt request for extension should be directed to the E.C.O.B., Bureau of the Census, 1201 East Tenth St., Jeffersonville, Indiana 47130.

WHERE TO GET ADDITIONAL INFORMATION

If you have any question not answered by this instruction booklet or if you need additional information, write to the E.C.O.B., Bureau of the Census, 1201 East Tenth Street, Jeffersonville, Indiana 47130. On all correspondence, be sure to include the 11-digit Census file number imprinted on the report form.

FILE COPY

Please fill in your file copy (including the 11-digit Census file number imprinted on the original) and keep it in your files for reference. If we find it necessary to contact you again regarding the report, your file copy will help you answer our questions.

II. SPECIAL INSTRUCTIONS

CONSTRUCTION JOINT VENTURES AND JOINT VENTURE ACTIVITY

For the purpose of this report a construction joint venture is a legal entity (corporation, partnership, etc.) established by two or more firms (at least one of which is a construction firm) who join together for the purpose of undertaking a specific construction project. Usually it permits such firms to pool their financing, their bonding capacity, their know-how and/or their equipment in the performance of a large or hazardous job.

In order to avoid possible duplication in the reporting of data relating to joint ventures, it is requested that the following rules be followed:

1. A separate report covering the joint venture entity should be filed by the "sponsor." If the joint venture had no "sponsor," responsibility for filing the separate "joint venture" construction report should be determined by the participating firms.

2. If the joint venture entity subcontracted out work to the "sponsoring" or "participating" firms (or to others) during 1972, the joint venture report should show this in the item related to the payments for construction work let out to other construction contractors (item 4A). The "sponsoring" or "participating" firms of the joint venture would indicate this work in their own establishment reports, if subcontracted to them, in their answers to the question on work undertaken by this establishment for other contractors (item 10E).

3. If during 1972 construction work was done for the joint venture entity on some pro rata or share basis by the "participating" firms (instead of on a formal subcontract basis), the separate report for joint venture entity should handle such "shared" work as construction work let out by this establishment to other construction contractors (item 4A). The separate establishment reports for the "sponsoring" and

APPENDIX C—Continued

“participating” firms should include their shares of such work in their replies to the question on work done by this establishment for other contractors (item 10E).

4. Fees received by the sponsors for the management of joint ventures should be considered construction receipts and included as such in the sponsor's own report.

5. Except as indicated in 2, 3, and 4 above, the “sponsor” of and the “participating” firms in a joint venture should exclude joint venture operations from their own “construction establishment” reports.

6. The joint venture item in the identification section (item 1F) of the questionnaire should be completed by all establishments sponsoring, or operating as a joint venture entity.

7. The separate establishment report of the joint venture entity and the separate establishment reports of the sponsoring or participating firms should, of course, contain appropriate replies to all other items on the questionnaire.

SALES AND INSTALLATION OF SELECTED ITEMS

A construction establishment report is required from establishments which engage in the **sales and installation** of such items as plumbing, heating, and central air-conditioning supplies and equipment; lumber and building materials; paint, glass and wallpaper; and electrical and wiring supplies for construction purposes—if all or the major portion of their 1972 sales were limited to the above items and such sales included installation.

III. DETAILED INSTRUCTIONS – ITEMS ON THE REPORT FORM

► Item 1. IDENTIFICATION INFORMATION

(See instructions on report form.)

► Item 2. NUMBER OF EMPLOYEES

(See instructions on report form.) Report employees on the payroll for the pay periods including the 12th of March, May, August, and November 1972. Include all those on paid sick leave, paid holidays, and paid vacations. **INCLUDE** salaried officers and executives, if a corporation. **DO NOT INCLUDE** proprietors and partners, if an unincorporated business. This definition is the same as used in completing Employer's Quarterly Federal Tax Return, Treasury Form 941.

Be sure also to complete columns e and f. Always divide the total (column e) by “4” even though there may not be any employees reported for a particular pay period.

► Item 3. PAYROLLS

Report total wages, salaries, bonuses, commissions, fees, and other remuneration paid to your employees during 1972, **before** deductions such as employee's social security contributions, withholding taxes, group insurance premiums, union dues, and savings bonds. **INCLUDE** salaries of officers, if a corporation.

Also, **INCLUDE** such items as dismissal pay, vacation and sick leave pay, the cash equivalent of payments in kind (such as goods, lodging, food, and clothing). **DO NOT** include payments to, or withdrawals by, proprietors or partners of an unincorporated business. This definition is the same as used in completing Employer's Quarterly Federal Tax Return, Treasury Form 941.

► Item 4. PAYMENTS MADE BY THIS ESTABLISHMENT DURING 1972 FOR MATERIALS PURCHASED AND FOR CONSTRUCTION WORK LET OUT TO OTHERS

See items 4A and 4B in next column.

Item 4A. Payments for construction work let out by this establishment to other construction contractors – Include all payments made during 1972 for construction work let out to other construction contractors. General contractors should include payments to subcontractors. Builders should include payments made to general contractors and also payments made directly to subcontractors. Special trade contractors should include payments to subcontractors. **Note:** For the purpose of this report the payments made by **this establishment** for its purchases of materials, components, and supplies should not be included here in item 4A even if the materials were provided to a subcontractor for his use.

This establishment's purchases of materials, components, and supplies should be reported in item 4B. However, if payments to subcontractors covered materials **purchased directly by the subcontractors**, then the total of such payments (including material charges) should be reported here in item 4A.

If this establishment let out a subcontract covering the labor and the materials but required the subcontractor in turn to purchase such materials from this establishment, then the total payments (including the material charges) should be reported here in item 4A. In addition, this establishment report should include in item 8C the value of such materials sold to the subcontractor. Appropriate entries should also be made in item 9.

If it is the practice – in the areas where this establishment is engaging in new construction work – for the State, local governments, or their special authorities or utility companies to undertake the installation of certain utility services or the construction of roads for you and to then bill this establishment for such work, then payments in 1972 for such work should be included here in item 4A.

APPENDIX C—Continued

Do not include here payments made for the rental of construction machinery or equipment. Report these payments in item 5.

Item 4B. Payments for materials, components, and supplies — Enter the total payments made by this establishment during 1972 for its purchase of all materials, components, and supplies and fuels used for construction purposes. Supplies include expendable tools which are charged to current accounts. Payments should include freight and other direct charges incurred by this establishment in acquiring the materials, components, and supplies. Payments should, of course, represent only the amount paid after discounts. Payments should also include the value of materials, components, and supplies obtained from other establishments of your company.

Include only physical goods. Exclude services used or overhead charges. Exclude cost of such services as advertising, telephone, telegram and cable, insurance, developmental and research services of engineering, management, marketing and other professional consultants, etc., unless charges for such services are included in the prices paid for materials. Exclude also from item 4 such overhead items as depreciation charges against plant and equipment, rent and rental allowances, interest payments, royalties, and patent fees.

Do not include payments for land or for the rental of construction machinery or equipment. Do not include payments for construction work let out by this establishment to other construction contractors.

Include payments for materials, supplies, and components used by this establishment in the construction for itself of new plants or equipment which is chargeable to this establishment's fixed assets accounts. Include payments for materials bought and resold to others. Include payments made for this establishment's direct purchases of materials, components, and supplies even though subsequently provided to subcontractors for their use.

► Item 5. PAYMENTS MADE FOR RENTING OR LEASING MACHINERY AND EQUIPMENT

Include all payments made by this establishment during 1972 for the renting or leasing of construction machinery and equipment, transportation equipment, production equipment, and office equipment, furniture and fixtures. (Include the rental or leasing of scaffolding.) Exclude payments for rental of land and buildings.

Do not include here payments made under agreements which the Internal Revenue Service regulations consider conditional sales contracts and which as a result are capitalized. Instead, such payments should be included in item 6, "Capital Expenditures". Do not include here in item 5 payments made under agreements which are in effect true subcontract construction arrangements. Such payments should be reported in item 4A. (Payments made to you for renting or leasing your machinery and equipment to others should be reported as a receipt in item 8C.)

► Item 6. CAPITAL EXPENDITURES (EXCLUDING LAND)

Capital expenditures refer to all costs actually incurred during 1972 which are or will be chargeable to the fixed assets accounts of your firm and which are of the type for which depreciation accounts are ordinarily maintained. These expenditures cover the acquisition, the construction, and the major alteration of this establishment's own buildings and other structures (whether purchased, constructed under contract, or constructed by this establishment's own forces) and the acquisition of machinery and equipment. Include payments made under agreements which the Internal Revenue Service regulations consider conditional sales contracts and which as a result are capitalized.

Do not include any expenditures actually made prior to 1972 or after the end of 1972. For example, if construction of a building, for this establishment's own use, was begun before 1972 and is not completed until after 1972, only those costs which were actually incurred during 1972 should be reported here.

If your records do not show the exact information needed, please make careful estimates. If capital expenditures are not recorded directly at the establishment level but are handled centrally at the company or division level, please report appropriate estimates for the establishments.

Item 6A. New structures, additions, and related facilities — Report the total expenditures of this establishment during 1972 for new buildings and structures, for major additions and alterations of buildings and structures, and expenditures for other facilities for this establishment's use (such as roads, docks, tracks, parking lots, fences, etc.). Do not include expenditures for land. (Report expenditures for used buildings in item 6C.)

Item 6B. New machinery and new equipment — Enter expenditures for new machinery and new equipment. Also include capitalized repairs and improvements to used machinery and equipment. (Report expenditures for used machinery and equipment in item 6D.)

Item 6C. Used structures and related facilities acquired from others — Enter expenditures for used structures and related facilities acquired from others. (Capitalized repairs and improvements to such assets should be reported in item 6A.)

Item 6D. Used machinery and used equipment acquired from others — Report expenditures for used machinery and equipment acquired from others. (Capitalized repairs and improvements to such equipment should be reported in item 6B. Expenditures for new machinery and equipment should be reported in item 6B.)

► Item 7. TOTAL BUSINESS RECEIPTS DURING 1972

Report the total business receipts of this establishment during 1972. Include all receipts from general contracting, special trades contracting and subcontracting, land development and improvement work.

APPENDIX C—Continued

Include all receipts from the sales of land (not recorded as fixed assets of this establishment) and the sales of buildings built for sale. Do not include monies realized from the sale or other disposition of this establishment's fixed assets. Also include all other receipts from **this establishment's** business operations (rental of equipment, wholesale, or retail sales, etc.).

Money obtained during the year in the form of construction loans should not be treated as business receipts.

Exclude receipts from operations in foreign countries. Do not include nonoperating income; such as, interest, dividends, etc.

► **Item 8. BUSINESS RECEIPTS DURING 1972 BY TYPE OF RECEIPT**

Item 8A. Construction receipts – Report in this item all receipts during 1972 from general contracting, special trades contracting and subcontracting, and land developing and land improvement work. Include receipts for maintenance and repair construction work as well as for new construction.

Also include here as receipts the value of any construction work done by this establishment for itself. This figure should also be included in item 6.

Builders should include in this item their 1972 receipts from the sales of buildings and other structures built for sale (excluding from these receipts all value of the land – but including the value of any improvements this establishment made to the land). Builders, who when selling a new home or other building accept an existing one in trade, should include here in construction receipts the estimated value of the trade-in.

Also include in construction receipts fees received as sponsors of joint ventures and fees received as agents for owners (for construction work.)

Receipts for separately definable architectural and engineering work for others, consultants' fees, and receipts from the rental of equipment to others, should not be included here. (Such receipts should be included in item 8C.)

Establishments filing this report which engage in the sale and installation of such construction components as plumbing, heating, and central air-conditioning supplies and equipment; lumber and building materials; paint, glass and wallpaper; and electrical and wiring supplies for construction purposes – should include here in item 8A, as construction receipts, both the receipts for the installation and the receipts covering the selling price of the items installed. (Receipts covering the selling price of such items sold, but not installed by this establishment, should be reported in item 8C.)

Item 8B. Receipts from land – Include receipts from the sale of land held for sale or land sold in connection with the sale of houses and other structures. Exclude from these receipts, the value of any improvements this establishment made to the land prior to the sale. (The receipts covering these improvements should be reported in item 8A.)

Item 8C. Business receipts during 1972 from other than A and B above – Include all business receipts of this establishment not reported in either item 8A, "Construction Receipts," or item 8B, "Receipts from Land," but included in item 7, "Total Business Receipts." Other business receipts should include business receipts from retail and wholesale trade, rental of equipment, manufacturing, transportation, legal service, insurance, finance, rental of property and other real estate operations, and other nonconstruction activities. Consultants' fees as well as receipts for separately definable architectural and engineering work for others should be included here. If entries are made for this item, be sure also to make appropriate entries in item 9B under "Business Activities Other Than Construction."

Item 8D. Total – Enter the total obtained by adding the entries in items 8A, "Construction Receipts," and 8B, "Receipts from Land," and 8C, "Business Receipts during 1972 from other than A and B." This total should equal the entry in item 7, "Total Business Receipts."

► **Item 9. KIND OF BUSINESS**

(See instructions on report form.) If you make entries in item 9B, under "Business Activities Other than Construction," you should also make entries in item 8C.

► **Item 10. CLASSIFICATIONS OF CONSTRUCTION WORK**

Note: Items 10A, 10B, 10C, 10D, and 10E ask for different breakdowns, using estimated percentages, of the Construction Receipts figure reported on line 8A, "Construction Receipts."

Item 10A. Types of construction this establishment engaged in during 1972 – The purpose of this item is to obtain a breakdown (estimates are acceptable) by the type of construction work for the construction receipts figure reported in item 8A. **Both new construction and maintenance and repair construction are included.**

Special Instructions for Special Trade Contractors. (Establishments engaged in such activities as painting, electrical work, excavation and foundation work, carpentry, masonry, etc.)

The purpose of this item is to obtain a breakdown of the construction receipts in order to show the types of buildings, structures, or other facilities on which the work of this establishment was performed.

APPENDIX C—Continued

Ideally, each building, structure, or other facility should be classified in terms of its own function. For example, a restaurant building would be classified in the restaurant category whether it was designed as a commercial restaurant building or an auxiliary unit of an educational institution. However, it is recognized that complex projects consisting of two or more different types of buildings, structures, or other facilities are difficult to classify and that sufficient information is seldom available. Such complex projects may, therefore, be classified in accordance with the major function of the total complex.

If this establishment engaged in the type of construction listed for a line, enter your best approximation of the percent of the establishment's construction receipts accounted for in 1972 by such work.

The following additional descriptions are provided to clarify reporting:

BUILDING CONSTRUCTION

Single-family houses — Includes single-family homes, town houses, and row houses.

Multifamily residential buildings — Includes houses for two or more families, apartment houses, etc.

Other residential buildings — Includes hotels, motels, dormitories, nurses' homes, and other nonhousekeeping residential structures.

Industrial buildings and warehouses — Includes all industrial buildings and plants which are used to house the production, assembly and warehousing activities of those establishments. Commercial warehouses, cold storage plants, grain elevators and storage buildings are also to be included here. Please note that heavy industrial facilities such as blast furnaces, petroleum refineries, chemical complexes, etc., should not be included under this category (line 311) but should be reported under nonbuilding construction (line 352).

Office and bank buildings — Includes all buildings which are used primarily for office space or to house banks and other financial institutions. It also includes government administrative buildings.

Stores, restaurants, public garages and auto service stations — Includes all buildings which are intended for use primarily in the wholesale, retail, and service trades. For example, complete shopping centers, department stores, drug stores, restaurants, public garages and auto service stations are in this category.

Religious buildings — Includes all buildings which are intended for religious services and functions, such as churches, synagogues, convents, monasteries, and seminaries, etc.

Educational buildings — Includes all buildings which are used directly in the administrative and instructional activities of establishments furnishing formal academic or technical courses. These establishments include colleges and universities as well as elementary

and secondary schools, and correspondence, commercial and trade schools. Libraries, museums and art galleries, as well as laboratories which are not a part of a manufacturing establishment, are also included as educational.

Hospital and institutional buildings — Includes all buildings for establishments which are primarily engaged in providing hospital and institutional care, such as general, mental, or tuberculosis hospitals, clinics or infirmaries, and sanitariums, and such institutions as nursing homes, homes for the aged, orphanages, etc.

Amusement, social and recreational buildings — Includes buildings which are used primarily for entertainment, social, and recreational activities, such as sports arenas, theaters, music halls, golf and country club buildings, fraternal organization lodges, skating rinks, bowling alleys, and indoor swimming pools, etc.

Farm buildings — Includes nonresidential farm buildings such as barns, poultry houses, implement sheds, silos, etc.

Other nonresidential buildings — Includes buildings which are not classified elsewhere, such as fire stations, bus and air passenger terminals, and hangars, etc.

NONBUILDING CONSTRUCTION

Highways and streets — Includes streets, roads, alleys, sidewalks, curbs and gutters, and forest and park roads. Also includes new and extension of old culverts; right-of-way drainage, erosion control, lighting, highway signs and guard rails; and earthwork protective structures in connection with road improvements.

Outdoor swimming pools — Includes also wading pools, reflecting pools, etc.

Bridges and elevated highways — Includes elevated highways, viaducts, and bridges.

Tunnels — Includes highway, pedestrian, and railway tunnels but excludes subways.

Dam and reservoir construction — Includes all dams and reservoirs.

Marine construction — Includes dredging, underwater rock removal, breakwaters, navigational channels, dikes, jetties, locks, etc.

Harbor and port facility construction — Includes the construction of docks, piers, wharves, etc.

Conservation and development construction — Includes land reclamation, irrigation projects, drainage canals, levees, flood control projects, etc.

Power and communication transmission lines, towers, and related facilities — Includes telephone and telegraph lines, television and radio towers, electric light and power facilities, etc.

APPENDIX C—Continued

Power plants — Includes electric generating plants, atomic energy plants, nuclear reactors, etc.

Sewers, water mains and related facilities — Includes sanitary and storm sewers, water supply systems, and related facilities.

Sewage treatment and water treatment plants — Includes water filtration plants, disposal plants, water softening plants, etc.

Pipeline construction — Includes pipeline construction for the transmission of gas and petroleum products, liquid oxygen, etc.

Mass transit construction — Includes railroads, subways, elevated railways, etc.

Heavy industrial facilities — Includes blast furnaces, petroleum refineries, chemical complexes, mining appurtenances (such as tipplers and washeries), etc.

Other heavy construction — Includes military and space facilities, etc.

Other types of construction work — Report on these lines any types of construction not covered by the above categories.

Item 10B. Location of construction work in 1972 — If all of the construction work of this establishment was undertaken within the State indicated by item 1B, i.e., actual physical location of this establishment as of December 31, 1972, then check the "yes" box in item 10B (1), and skip to item 10C. If, however, this establishment engaged in construction work in more than that one State, it will be necessary to enter the States in which the work was undertaken and your best estimate of the percent of construction receipts accounted for in 1972 by the work in each such State on the lines provided in item 10B (2). (If more space is required, use another sheet of paper and attach it to this report.)

Construction projects which involve more than one State, such as interstate bridges, should be prorated among the States involved using whatever system you prefer.

Item 10C. Ownership of construction projects — The purpose of this item is to obtain a breakdown (estimates are acceptable) of this establishment's construction receipts during 1972 between public construction and private construction. Thus, this question relates to the ownership of the projects or work undertaken and not to the financing. Public construction includes projects owned by the Federal, State, or local governments including public authorities and special districts.

Item 10D. Class of construction — The purpose of this item is to obtain a breakdown (estimates are acceptable) of this establishment's construction receipts during 1972 between new construction and maintenance and repair work.

New construction is defined to include the complete, original erection of structures and essential service facilities, as well as additions and alterations. Additions and alterations include such construction as the addition of a wing, a story or stories, conversion of space to other uses where structural changes are involved, or the initial installation of integral building service equipment in existing structures (e.g., elevators, escalators or air-conditioning systems).

Maintenance and repair work relates to the restoration of existing buildings or other structures or their related service facilities, including replacement of integral parts. Repainting, repapering, reroofing, redredging, railroad maintenance-of-way, and street and highway patching and minor resurfacing are included.

Item 10E. Work undertaken by this establishment for other construction contractors or for builders — If this establishment did not obtain receipts during 1972 for work done for other construction contractors or for builders, merely check the "no" box and skip to item 11.

If receipts were obtained during 1972 for work done for other contractors or builders, it will be necessary also to indicate the approximate percent of this establishment's total construction receipts accounted for by such work.

► **Item 11. FIXED ASSETS AND DEPRECIATION** Include all fixed tangible assets of this establishment such as buildings and other structures (offices, garages, shops, warehouses, etc.); stationary machinery (generators, building hoists, shop equipment, etc.); mobile machinery (tractors, trucks, cranes, draglines, mixers, etc.); and other equipment (office furniture, fixtures, etc.). Be sure to include capital expenditures made during 1972 (as reported in item 6E).

Do not include such items as current assets (cash, accounts receivable, etc.); depletable assets (land, timber, mineral rights, etc.); intangible assets (copyrights, patents, etc.); non-depreciable assets (inventories, etc.); and assets which have been sold, scrapped, or otherwise destroyed during 1972.

If depreciation data is not directly available from the books at the establishment level you may, for the purposes of this report, estimate it using your company's total depreciation/asset ratio or any other reasonable method.

APPENDIX C—Continued

►Item 12. CHECKS TO ASSURE A COMPLETE AND ACCURATE REPORT

The Census Bureau reviews your report for omissions, inconsistencies, and unusual entries. It is, therefore, suggested that this report be checked for omissions or inconsistencies prior to returning it to the Census Bureau. Follow the recommended checks in items 12A, 12B and 12C.

If the answer to item 12C is "No," please review the entries for reasonableness and revise them if in error. If the entries are correct, please confirm this in the "Explanation section," item 13.

►Item 13. EXPLANATION SECTION

Additional comments or explanations that may be helpful in understanding this report should be made in this section.

►Item 14. CERTIFICATION

Be sure to make the required entries in this item. Enter the month and day of the beginning and end of year this report covers. If a calendar year report: "From January 1, 1972 to December 31, 1972." If a fiscal year, specify which; such as, "From November 1, 1971 to October 31, 1972."

APPENDIX C—Continued

PENALTY FOR FAILURE TO REPORT DUE DATE: **FEBRUARY 15, 1973** Form Approved: O.M.B. No. 41-571119

FORM CC-1 (0100) U.S. DEPARTMENT OF COMMERCE
SOCIAL AND ECONOMIC STATISTICS ADMIN.
BUREAU OF THE CENSUS

1972 CENSUS OF THE CONSTRUCTION INDUSTRIES

Please return this form by February 15, 1973, TO **BUREAU OF THE CENSUS
1201 East Tenth Street
Jeffersonville, Indiana 47130**

PLEASE READ INSTRUCTION MANUAL AND INSTRUCTIONS ACCOMPANYING EACH ITEM BEFORE COMPLETING

If hook figures are not available, carefully prepared estimates are acceptable. Complete every item.

If filing by due date causes an undue burden, a request for an extension of time should be sent to the above address. Please mention the 11-digit Census File Number in the upper left of the address box if you write regarding this report.

A separate Census report should be submitted for each of your "construction establishments" which operated during any part of 1972. A "construction establishment" is defined as a relatively permanent office or other place of business, at which or from which the usual business activities related to construction are conducted. Separate reports are not required for each project site. Information on individual projects should be included in the report for the "establishment" responsible for the project. Write for additional report forms if needed.

The report should only cover domestic operations (the 50 States and the District of Columbia).

NOTICE—Response to this inquiry is required by law (Title 13, U.S. Code). By the same law, your report to the Census Bureau is confidential. It may be seen only by sworn Census employees and may be used only for statistical purposes. The law also provides that copies retained in your files are immune from legal process.

In correspondence pertaining to this report, please refer to this Census File Number **CC-1** Employer Identification Number

Please correct errors in name, address and ZIP code. ENTER street and number if not shown.

CENSUS USE ONLY	801	802	803	804	805	806	807	808	809	810	811
	812	813	814	815	816	817	818	819	820	821	822

ITEM 1 IDENTIFICATION INFORMATION

A. NAME
Is the name shown in the address box the name by which this establishment is known to the public?
☐ Yes
☐ No — Enter trade name _____

B. LOCATION INQUIRY (Physical location of establishment)
The purpose of this inquiry is to determine the place (city, county, etc.) where your establishment is actually located (which may differ from the mailing address) so that the data can be tabulated in the correct geographic area.

1. Is your establishment **PHYSICALLY** located at the address shown in the address box of this form?
☐ No — Enter physical location here _____
Also answer 2 and 3 below
Street name and number* _____
Place (city, village, etc.) _____
State _____ ZIP code _____
*If location cannot be described by street name and number, give as much information as possible such as name of shopping center, street intersection, highway number or distance from nearest town, etc.

2. Is your establishment located **WITHIN** the LEGAL boundaries of the city, village, etc., which you indicate is its **PHYSICAL** location?
1 ☐ Yes 2 ☐ No

3. In what county is your establishment **PHYSICALLY** located?
County _____

C. EMPLOYER IDENTIFICATION NUMBER
1. Is the Employer Identification (EI) Number printed in the address box the SAME as that used for this establishment on your latest 1972 Employer's Quarterly Federal Tax Return, Treasury Form 941?
☐ Yes ☐ No — Enter currently assigned (9 digit) EI number → _____

2. Did this establishment also use any other Employer Identification (EI) Number(s) during 1972?
☐ Yes — Enter 9 digit EI number(s) → _____
☐ No

D. LEGAL FORM OF ORGANIZATION OF COMPANY OPERATING THIS ESTABLISHMENT (MARK ONE BOX BELOW)

001 ☐ Individual proprietor
☐ Partnership
☐ Corporation (Do NOT mark it any form of cooperative association)
☐ Co-op (cooperative association), corporate or noncorporate
☐ Other — Specify _____

E. CHANGES IN OWNERSHIP OR ORGANIZATION OF THIS ESTABLISHMENT DURING 1972 (MARK APPROPRIATE BOXES BELOW)

1 ☐ Purchased during 1972 — Enter name and address of former owner, EI No. (if known), and month of purchase.
Name and address (No., St., City, State, ZIP code) _____ EI No. (if known) _____
Month: _____

2 ☐ Sold during 1972 — Enter name and address of purchaser, EI No. (if known), and month sold.
Name and address (No., St., City, State, ZIP code) _____ EI No. (if known) _____
Month: _____

3 ☐ Went out of business during 1972 (No new owner) — Enter date
Month: _____

4 ☐ Reorganized during 1972 — Describe in item 13, e.g., "partnership change," or "change in corporate status." — Enter date
Month: _____

5 ☐ Started as a new business during 1972 (No previous owner) — Enter date
Month: _____

6 ☐ Was inactive for entire year
7 ☐ No change during 1972

F. CONSTRUCTION JOINT VENTURES: (A joint venture is a separate legal entity formed to undertake a specific construction project by two or more firms, at least one of which is a construction firm.) Do NOT include regular continuing partnerships.

1. Was this establishment itself a construction joint venture during 1972?
2 ☐ No Continue with question F.2 below.
1 ☐ Yes A. Please read carefully the separate instructions relating to the proper reporting of joint venture activity on page 3 of the instruction manual.
B. Enter information regarding sponsoring and participating firms here →

SPON- SORING FIRM	Name and address (No., St., City, State, ZIP code)	Employer Identification No. → _____
ALL OTHER MEMBER FIRMS OF THIS VEN- TURE	Name and address (No., St., City, State, ZIP code)	Employer Identification No. → _____
	Name and address (No., St., City, State, ZIP code)	Employer Identification No. → _____

If more space is needed, please use item 13 or attach a separate sheet.

2. Was this establishment the sponsor of any joint ventures during 1972?
3 ☐ No Continue with G below. 005 Number _____
1 ☐ Yes How many? → _____
(Enter number and list the name, location of the job, and the Employer Identification Number for each joint venture sponsored by this establishment in 1972.)

Name	Name
Location (State)	Location (State)
EI No. _____	EI No. _____

If more space is needed, please use item 13 or attach a separate sheet.

NOTE: As sponsor you are required to file a separate report for each joint venture which you sponsored. Please read carefully the separate instructions relating to the proper reporting of joint venture activity on page 3 of the instruction manual.

G. COMPANY AFFILIATION

1. Is the first digit of your Census File Number (imprinted in the upper left corner of the address box) "0"?
2 ☐ No SKIP to item 2 on page 2.
1 ☐ Yes Continue with questions G.2, G.3, and G.4 below.

2. Is this company owned or controlled by another company?
2 ☐ No Continue with question G.3 below.
1 ☐ Yes Enter name, address, and EI No. of owning or controlling company.

Name and address (No., St., City, State, ZIP code)	EI Number
_____	_____

3. Does this company own or control any other company or companies?
2 ☐ No Continue with question G.4 below.
1 ☐ Yes Enter name, address, and EI No. of company or companies owned.

Name and address (No., St., City, State, ZIP code)	EI Number
_____	_____

If more space is needed, please use item 13 or attach a separate sheet.

4. In 1972 did the company operating this establishment also operate any OTHER establishments (other than the one reported in item 1B) under the Employer Identification Number indicated in item 1C?
2 ☐ No Continue with item 2 on page 2.
1 ☐ Yes Enter in item 13, page 4, name(s) and address(es) of all such other establishments, a brief description of their kind of business, and their approximate 1972 payroll.

002 CENSUS USE ONLY

Continue with item 1F next column

Continue with item 2 on Page 2

APPENDIX C—Continued

Page 2

ITEM 2 NUMBER OF EMPLOYEES								
Report all paid employees (permanent and temporary, full-time and part-time) on the payroll of this establishment during the pay periods shown below. Be sure to include those on paid sick leave, paid holidays, and paid vacations, as well as those actually working.				If a corporation, include salaried officers and executives of this establishment; if an unincorporated concern, exclude proprietors or partners. Do not include here your subcontractors and their employees.				
Type of employees	Number of employees of this establishment during the pay period including the 12th of:				Sum of columns (a) to (d) (e)	Average number of employees (Divide entry in column (e) by "4") (f)		
	March 1972 (a)	May 1972 (b)	August 1972 (c)	November 1972 (d)				
A. Construction Workers — (Such as painters, carpenters, plumbers, electricians, construction laborers, etc.) Include journeymen, mechanics, apprentices, equipment operators, laborers, truck drivers and helpers, and on-site record keepers and watchmen, and others engaged directly in construction operations and supervisors up through the working foreman level	101	102	103	104	105	106		
B. All other employees — All other employees such as those engaged in the following activities: Executive, purchasing, accounting, personnel, professional and technical activities, routine office functions, and supervision above the working foreman level	107	108	109	110	111	112		
C. TOTAL (Sum of lines A and B)	113	114	115	116	117	118		
IMPORTANT — For items 3—8 below, please report dollar figures rounded to the nearest thousand dollars. However, if you prefer you may report to the nearest dollar. In either case, please be careful to enter your figures in the correct column. SEE EXAMPLE — If the value is less than \$1,000, report the actual amount in the dollars column. Be sure to complete every item. Enter "0" if there is no dollar entry for an item.					EXAMPLE If the payroll is \$1,125,628: PREFERRED method → 1 126 000 Acceptable method → 1 125 628			
ITEM 3 PAYROLLS								
Report the gross earnings paid in calendar year 1972 to employees of this establishment prior to such deductions as employee's Social Security contributions, withholding taxes, group insurance premiums, union dues and savings bonds. Include in gross earnings all wages, salaries, commissions, dismissal pay, paid bonuses, vacation and sick-leave pay, and the cash equivalent of compensation paid in kind. If a corporation, include salaries of officers of this establishment; if an unincorporated concern, exclude payments to proprietors or partners.					Key	Mil- lions	Thou- sands	Dol- lars
A. Construction workers (See definition in item 2A)					121	\$		
B. All other employees (See definition in item 2B)					122	\$		
C. TOTAL PAYROLL IN 1972 (Sum of lines A and B)					123	\$		
ITEM 4 PAYMENTS MADE BY THIS ESTABLISHMENT DURING 1972 FOR MATERIALS PURCHASED AND FOR CONSTRUCTION WORK LET OUT TO OTHERS								
A. Payments for construction work let out by this establishment to other construction contractors Enter payments made during 1972 for such contracting, including payments made to both subcontractors and general contractors. (Do NOT include here payments made by this establishment for its purchases of materials, components, and supplies. Report these payments in B below. Also do NOT include here payments made for the rental of construction machinery or equipment. Report these payments in item 5 below.)					Key	Mil- lions	Thou- sands	Dol- lars
B. Payments for materials, components, and supplies Enter the total payments made by this establishment during 1972 for its purchases of all materials, components, and supplies. (Do NOT include payments for subcontract construction let out to others and already reported in item 4A above. Do NOT include payments for the rental of construction machinery or equipment; report these payments in item 5 below. Also do NOT include payments for land.)					124	\$		
C. TOTAL (Sum of lines A and B)					125	\$		
ITEM 5 PAYMENTS MADE FOR RENTING OR LEASING MACHINERY AND EQUIPMENT								
Enter the total payments made by this establishment during 1972 for the rental or lease of construction machinery and equipment, transportation equipment, production equipment, and office equipment, furniture and fixtures. (Do NOT include payments for subcontract work. Do NOT include payments made under agreements which the Internal Revenue Service regulations consider conditional sales contracts and which as a result are capitalized.)					Key	Mil- lions	Thou- sands	Dol- lars
127					\$			
ITEM 6 CAPITAL EXPENDITURES (Exclude land)								
Report on lines A to E below all capital expenditures of this establishment during 1972. (Capital expenditures include all costs which are chargeable to the fixed assets accounts of this establishment and for which depreciation accounts are ordinarily maintained. Include here also payments made under agreements which the Internal Revenue Service regulations consider conditional sales contracts and which as a result are capitalized.) If you did not make any expenditure of the kind described, enter "0" on line E.					Key	Mil- lions	Thou- sands	Dol- lars
A. New structures, additions, and related facilities					128	\$		
B. New machinery and new equipment					129	\$		
C. Used structures and related facilities acquired from others					130	\$		
D. Used machinery and used equipment acquired from others					131	\$		
E. TOTAL (Sum of lines A, B, C, and D)					132	\$		
ITEM 7 TOTAL BUSINESS RECEIPTS DURING 1972								
Report the total business receipts of this establishment during 1972. Report all sales and other receipts from this establishment's business operations. (Do NOT include nonoperating income; such as interest, dividends, etc.)					Key	Mil- lions	Thou- sands	Dol- lars
133					\$			
ITEM 8 BUSINESS RECEIPTS DURING 1972, BY TYPE OF RECEIPT								
A. Construction receipts — Of the amount reported in item 7, approximately how much represents receipts during 1972 from construction activities? (Include receipts from both new construction and from maintenance and repair work.) Include all construction receipts from general contracting, special trades contracting, land development and land improvement work. Also include receipts from the sales of buildings and other structures built for sale (exclude from these receipts all value of the land but include the value of any improvements this establishment made to the land). Be sure to include the value of any construction work done by this establishment for itself. (Exclude receipts for architectural and engineering work and exclude receipts from the rental of equipment to others.)					Key	Mil- lions	Thou- sands	Dol- lars
134					\$			
B. Receipts from land — Of the amount reported in item 7, approximately how much represented receipts during 1972 from land sales? (Exclude the value of improvements and land development reported in A above)					135	\$		
C. Business receipts during 1972 from other than A and B above Include the business receipts of this establishment which were obtained from other activities such as architectural and engineering work, retail and wholesale trade, rental of equipment to others, manufacturing, transportation, legal service, insurance, finance, rental of property or other real estate operations, and other nonconstruction activities not included in A and B above.					136	\$		
D. TOTAL (Sum of lines A, B, and C) (This total should be the same as the amount reported in item 7 above.)					137	\$		

FORM CC-1

Continue with item 9 on page 3

APPENDIX C-Continued

Page 3

Census File Number

(Please enter from address box on page 1)

ITEM 9 KIND OF BUSINESS

A. Describe the kind of business activities this establishment (identified in item 1B) was engaged in during 1972.

B. Review all following descriptions. Place a "1" on the line next to the description which indicates this establishment's most important kind of business (based on total business receipts) in 1972. If this establishment engaged in other kinds of business during 1972, place a "2" on the line next to the second most important kind. Place a "3" next to the third most important kind of business. Then place an "X" mark next to all other descriptions that describe other kinds of business engaged in by this establishment during 1972.

BUILDING CONSTRUCTION:

AS A GENERAL CONTRACTOR (building on the land of others)

201. General Building Contractor (general contractor engaged in the construction of residential, industrial, commercial, educational, religious, institutional and other buildings.)

AS AN OPERATIVE, MERCHANT, OR INVESTMENT BUILDER (building on own land for sale, lease, or rental)

202. Operative or Merchant Builder (for sale to others)

203. Investment Builder (for lease or rental to others)

HEAVY OR ENGINEERING CONSTRUCTION AS A GENERAL CONTRACTOR:

204. Highway and Street Contractor - Excluding Elevated Highways (general contractor engaged in construction of highways and streets, parking areas, airports, light construction work for water and sewer projects incidental to street construction, and work closely related to highway and street construction such as installation of guard rails, and highway signs.)

205. Other Heavy Construction Contractor (general contractor engaged in construction of bridges; tunnels; elevated highways; dams; marine construction; on site construction of industrial furnaces and appurtenances; utility construction such as heavy construction water and sewer lines, pipelines, communication and power lines; and other heavy construction)

SPECIAL TRADE CONTRACTOR:

NOTE: General Contractors who incidentally perform some of these trades under their general contract should NOT make entries in these boxes unless they also accepted this work as SPECIAL TRADE CONTRACTORS in 1972.

- 206. Acoustical contractor
- 207. Air conditioning contractor
- 208. Carpentry contractor
- 209. Concrete contractor
- 210. Dry wall contractor
- 211. Electrical contractor
- 212. Elevator and escalator contractor
- 213. Excavation and grading contractor
- 214. Fence construction contractor
- 215. Floor covering and floor laying (except wood) contractor
- 216. Flooring (wood) contractor
- 217. Foundation contractor
- 218. Glass and glazing contractor
- 219. Heating contractor (except electric)
- 220. Heating contractor, electric
- 221. Insulation contractor
- 222. Lathing and/or plastering contractor
- 223. Masonry and/or stone setting contractor
- 224. Millwright (installing and/or dismantling industrial machinery and equipment)
- 225. Ornamental metal work contractor
- 226. Painting, paperhanging contractor
- 227. Paving contractor
- 228. Plumbing contractor
- 229. Refrigeration contractor
- 230. Residential remodeling contractor
- 231. Roofing contractor
- 232. Sheet metal contractor
- 233. Siding contractor and/or applicator
- 234. Structural steel erection contractor
- 235. Swimming pool construction contractor
- 236. Terrazzo, ceramic tile, marble, and mosaic contractor
- 237. Water well drilling contractor
- 238. Waterproofing, fireproofing, dampproofing contractor
- 239. Wrecking and demolition contractor
- 240. Other - Specify _____

LAND DEVELOPER:

- 237. Developer of own land for sale to others
- 238. Developer of land owned by others

BUSINESS ACTIVITIES OTHER THAN CONSTRUCTION UNDERTAKEN BY THIS SAME ESTABLISHMENT:

- 240. Architectural or engineering services for others
- 241. Finance or mortgage banking
- 242. Insurance
- 243. Legal service
- 244. Manufacturing - Specify kind _____
- 245. Real estate
- 246. Rental of construction equipment to others
- 247. Retail trade - Specify kind _____
- 248. Transportation
- 249. Wholesale trade - Specify kind _____
- 250. Other - Specify kind _____

ITEM 10 CLASSIFICATIONS OF CONSTRUCTION WORK

NOTE: Items 10A, B, C, D, and E each asks for an estimated percentage breakdown of the Construction Receipts figure reported on line A, item 8. (Construction Receipts include receipts from both new construction and from maintenance and repair work.)

A. Types of construction this establishment engaged in during 1972.

The purpose of this item is to obtain a breakdown of the construction receipts in order to show the types of buildings, structures, or other facilities on which the work of this establishment was undertaken.

On each of the lines below, enter your best estimate of the percent of this establishment's total construction receipts which were accounted for in 1972 by types of construction listed.

Be sure to read instructions for item 10A on page 6 in the instruction booklet before completing this item.

EXAMPLE FOR REPORTING PERCENTS	If figure is 38.76%: Report WHOLE percents NOT	Percent	
		39 %	38.76 %
Type of construction	Key	Percent of total construction receipts	
Building construction			
Single-family houses (include row or town houses).	301	%	
Multifamily residential buildings (containing 2 or more housing units) including apartment houses.	302	%	
Other residential buildings (hotels, motels, and dormitories).	303	%	
Industrial buildings and warehouses	311	%	
Office and bank buildings	312	%	
Stores, restaurants, public garages, and auto service stations	313	%	
Religious buildings	314	%	
Educational buildings	315	%	
Hospital and institutional buildings	316	%	
Amusement, social, and recreational buildings	317	%	
Farm buildings (nonresidential)	318	%	
Other nonresidential buildings - Specify _____	319	%	
Nonbuilding construction			
Highways and streets (including work closely related to highway and street construction such as installation of guard rails, highway signs, etc.)	331	%	
Outdoor swimming pools	332	%	
Bridges and elevated highways	341	%	
Tunnels (highway, pedestrian, and railway, except subway)	340	%	
Dam and reservoir construction	342	%	
Marine construction (dredging, underwater rock removal, breakwaters, navigational channels, locks, dikes, jetties, etc.)	343	%	
Harbor and port facility construction (docks, piers, wharves, etc.)	344	%	
Conservation and development construction (land reclamation, irrigation projects, drainage canals, levees, and flood control projects, etc.)	345	%	
Power and communication transmission lines, towers, and related facilities	346	%	
Power plants	354	%	
Sewers, water mains, and related facilities	347	%	
Sewage treatment and water treatment plants	355	%	
Pipeline construction (gas, petroleum, etc.)	348	%	
Mass transit construction (railroads, subways, elevated railways, etc.)	351	%	
Heavy industrial facilities (blast furnaces, petroleum refineries, chemical complexes, etc.)	352	%	
Other heavy construction - Specify _____	353	%	
Other types of construction work - Specify _____	399	%	
TOTAL CONSTRUCTION RECEIPTS		100 %

ITEM 11 FIXED ASSETS AND DEPRECIATION																																																																																																				
Report the Gross Book Value, Depreciation and Net Book Value of the fixed tangible assets of this establishment for which depreciation accounts ordinarily are maintained. Gross Book Value represents the acquisition cost (original cost or other basis) to your company of such depreciable assets. Used assets purchased or received from other establishments of your company should be included at their acquisition cost rather than original book value. Be sure to read instructions for item 11 on page 8 in the instruction booklet before completing this item.

ITEM 12 CHECKS TO ASSURE A COMPLETE AND ACCURATE REPORT																																																																																																				
The Census Bureau reviews your report for omissions, inconsistencies, and unusual entries. To save both you and the Government costly correspondence about such problems, please make the following checks before returning your completed report.																																																																																																				
A. Review the report carefully to see that you have not omitted answers to any items.																																																																																																				
B. Do the reported percentages add to 100% in items 10A, 10B, 10C, and 10D?																																																																																																				
C. Is the total for Business Receipts (item 7) greater than the sum of Payrolls (item 3C) plus Total Payments Made by this Establishment During 1972 for Materials Purchased and for Construction Work Let Out to Others (item 4C)?																																																																																																				
1 <input type="checkbox"/> Yes SKIP to item 14 2 <input type="checkbox"/> No Review those entries for reasonableness and revise them if in error. If entries are correct indicate this in item 13.																																																																																																				
ITEM 13 EXPLANATION SECTION (Use this space for additional explanation regarding the data reported for this establishment.)																																																																																																				
(If more space is required use another sheet of paper and attach it to this report. Be sure to include the 11-digit Census File Number shown in the address box on page 1)

FORM CC-1

APPENDIX D. Authority for Census: Title 13, United States Code

(Codification of August 1954 amended by Acts of August 1957, September 1960, and June and October 1962, and of August 1964)

Collection and publication: Five-year periods (131)

The Secretary shall take, compile, and publish censuses of manufactures, of mineral industries, and of other businesses... in the year 1964, then in the year 1968, and every fifth year thereafter, and each such census shall relate to the year immediately preceding the taking thereof.

Geographic scope of censuses (191a)

Each of the censuses authorized by this chapter (other than censuses of population) shall include each State, the District of Columbia, Alaska, Hawaii, the Virgin Islands, Guam, and the Commonwealth of Puerto Rico, and as may be determined by the Secretary, such other possessions and areas over which the United States exercises jurisdiction, control, or sovereignty. Censuses of population shall include all geographic areas referred to in the preceding sentence. Inclusion of other areas over which the United States exercises jurisdiction or control shall be subject to the concurrence of the Secretary of State.

Wrongful disclosure of information (214)

Whoever, being an employee referred to in subchapter II of chapter 1 of this title, having taken and subscribed the oath of

office, publishes or communicates, without the written authority of the Secretary or other authorized officer or employee of the Department of Commerce or bureau or agency thereof, any information coming into his possession by reason of his employment under the provisions of this title, shall be fined not more than \$1,000 or imprisoned not more than two years, or both.

Failure to answer questions affecting companies, businesses, religious bodies, and other organizations: False answers (224)

Whoever, being the owner, official, agent, person in charge, or assistant to the person in charge, of any company, business, institution, establishment, religious body, or organization of any nature whatsoever, neglects or refuses, when requested by the Secretary or other authorized officer or employee of the Department of Commerce or bureau or agency thereof, whether such request be made by registered mail, by certified mail, by telegraph, by visiting representative, or by one or more of these methods, to answer completely and correctly to the best of his knowledge all questions relating to his company, business, institution, establishment, religious body, or other organization, or to records or statistics in his official custody, contained on any census or other schedule prepared and submitted to him under the authority of this title, shall be fined not more than \$500 or imprisoned not more than sixty days, or both; and if he willfully gives a false answer to any such questions, he shall be fined not more than \$10,000 or imprisoned not more than one year, or both.
